FULTON SPECIAL BUCK SAW.

Regular $1.00 quality.

OUR PRICE, 64c
FULLY GUARANTEED

Cuts fast and easy, runs a long time without filing and setting. Blade is extra thin and narrow, offers but little resistance to the wood and cuts well without bearing down on frame. Frame is made of carefully selected hardwood, with double riveted brace, is smoothly sandpapered all over, then varnished two coats. Has loop pattern rod, heavily tinned, with japanned turnbuckle. Blade is best clock spring steel, tempered and hardened, and fully warranted. Teeth are V shaped, five points to the inch, full bevel, hand filed and hand set. Blade is 1½ inches wide, blued finish and handsomely etched.

Fulton Circular Cordwood Saws.

$2.28 **$8.02**

These Cordwood Saws can only be furnished as listed below. If you must have a saw in any way different write for special price, giving full specifications

We will not furnish saws larger than 26 inches in diameter with arbor holes smaller than 1⅛ inches, as it is not safe to run larger saws on smaller mandrels.

Low speed first quality saws for use on cordwood and pole sawing machines. The special tooth with deep round gullet gives plenty of room to chamber the sawdust and prevents cracking the saw. Made of best saw steel.

Saws 28 to 36 inches not furnished with holes smaller than 1⅛ inches, as they are not safe when run on smaller mandrels.

Note All Cut-Off, Cordwood and Rip Saws quoted above are carried in stock in Chicago in the sizes and specifications as listed and can shipped immediately with other goods if desired upon receipt of your order. If saws are wanted in any way different from the above we make them to order quicker than any other firm. Give us full specifications of saws wanted and we will quote low prices at once.

FULTON CIRCULAR MILL SAWS

SOLID TOOTH, 40 TO 60 INCHES.

$13.00 to $52.00

All saws 40 inches and larger, both with solid teeth and inserted teeth, are made to order only, and in ordering be sure to give us all specifications as below so we can make the saw to suit you without the delay that must occur if we have to write you for additional information. We carry plates 40 to 60 inches in diameter in stock at factory in Southeastern Michigan ready to finish on receipt of order and we make shipment of large saws more promptly than any other firm. All saws 40 inches and larger should have 2-inch mandrel holes, with two ⅝-inch pin holes, spaced 3 inches center to center. In ordering be sure to give all specifications as follows: Number of teeth wanted in saw, gauge at rim, gauge at center, whether spring or swage set, temper, speed, feed, whether to cut hard or soft wood, right or left hand, size of mandrel hole, size and distance center to center of pin holes.

INSERTED TO 40 TO 60 IN

$28.

No. 9H59406⅓ Fulton Solid Tooth Mill Saws have a reputation for quality second to none and we absolutely guarantee them equal to any saw made, regardless of price.

HOWARD CORUNDUM WHEELS.

Corundum is the hardest and sharpest substance known except the diamond. It is not only extremely hard, but very tough and breaks with sharp jagged edges, making it especially suited for fast grinding. Howard grinding wheels are made of pure corundum of the very best grade, unadulterated with flint, garnet, emery or other inferior substances. Howard Corundum Wheels are made of different sizes of grain and degrees of hardness to suit all classes of grinding.

TABLE showing number of revolutions per minute at which Howard Corundum Wheels give best results.

Diam. Wheel, in.	2	3	4	5	6	8	10	12	14	16	18

GUARANTEED RUBBER BELTING.

Made throughout of the very best materials, both cotton and rubber being carefully selected. Our rubber belting stretches less than any on the market, which prevents slipping and makes the belt deliver full power. We do not recommend rubber belts for use on threshers, as canvas belting is superior for such use. Be careful in making orders for belt, for if sent as ordered it cannot be taken back or exchanged. If belts are wanted made endless allow the price of 3 feet of belt for lap and labor of splicing.

2-PLY BANNER BRAND RUBBER BELTING.

Has rubber outer coatings and two cotton duck plies. Banner Belting is the best two-ply belting sold by anyone. Recommended for light work, hand power machines, farm machinery, etc. Equal to belting offered by others at 25 to 50 per cent more than our prices.

No. 9H38902½ Banner 2-Ply Rubber Belting.

ENDLESS CANVAS BELTS.

Made of our regular stitched canvas belting, spliced in such a manner that they are no thicker and are just as strong and flexible at point of splicing as at any other part of belt. Made of new strong duck or canvas, closely stitched, evenly stretched and filled with a special oil which keeps them flexible and waterproof. They are then painted with a first quality red paint which causes them to take hold of the pulley and prevents slipping. Do not become stiff in cold weather. Best belts made for threshing outfits, quarries, brick machines, saw mills, etc. **We carry in stock the belts listed below and can ship any size promptly.** Actual lengths of endless belts are 3 feet less than stated, as it requires the price of 3 feet for lap and labor of making belts endless.

ACHINERY

WE ISSUE A SPECIAL CATALOG OF LATHES, DRILLS, SHAFTING, PULLEYS AND SHOP TOOLS. Write for It. IT IS FREE

"Expert" Lathes are unsurpassed in material and workmanship. Heavy, rigid, power-materials. All cylindrical parts are ground, insuring accuracy. All sliding and fitting surfaces are scraped to a master surface plate. The bearings of the head spindle are of the best phosphor bronze metal, large and heavy. The lead screw is cut on a special milling machine with the thread; this develops a screw having an accurate pitch, deep in thread, large in diameter and should last a lifetime.

Lathes are indexed to cut standard threads from 4 to 40, as follows: 4, 5, 6, 7, 8, 9, 10, 11 (11½ pipe thread), 12, 13, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 36, and 40. All the above threads may be cut without compounding gears.

Every part of the "Expert" Lathes is inspected by test gauges having a limit of accuracy of one-thousandth of an inch. Each lathe when finished and assembled complete is operated and tested before leaving the factory.

JENNINGS' SPECIAL HACK SAW OUTFIT. $1.85

No. 9H5245 Gives you a saw suitable for every purpose for which a hack saw is ever needed, and of higher quality than you could possibly get elsewhere. Frame is extra heavy steel, full nickel plated, and is adjustable to hold 10, 12 or 14-inch blades. Faces blades to four different angles and is instantly adjustable to hold different length blades. Blades are highest quality, made of best spring steel, tempered very hard, so hard they cannot be filed, but last four times as long without filing as an ordinary blade with one filing. Outfit consists of frame and six blades as follows: one 10-inch coarse (14-tooth), one 10-inch fine (24-tooth), one 12-inch coarse (14-tooth), one 12-inch fine (24-tooth), and two 14-inch coarse (14-tooth). FULTON DROP FORGED SQUARE SHANK SCREWDRIVER.

OUR PRICE, 14c USUAL 25-CENT VALUE.

No. 9H55806 A strong, substantial screwdriver of highest possible quality, made for machinists, carpenters, electricians and others whose work requires the very best tools. Shank is square, for use with a wrench on heavy work. The blade, shank and head are forged from one solid piece of steel. Shank extends entirely through handle, is flattened on top and it cannot turn, and handle cannot come off. Shanks are made of refined crucible steel, carefully forged, properly tempered and well finished. Handles are hardwood, finished in black. Ferrules are polished steel, immovably shrunk on.

Samson Strong Solid Bench Vises

Strong, durable and substantial, built for heavy every day shop use. We do not fit extra wide jaws on small size vises in order to quote a lower price. Our 3½-inch vise weighs as much as 4-inch vises offered by other concerns; and so with every size. This extra weight is distributed at points of greatest strain, making our Samson the strongest vises on the market. Samson Bench Vises have cold rolled steel screws and handles, tempered tool steel jaws and every one is warranted perfect. Dull black finish. Polished jaws, knobs and handles.

Blacksmiths' Hand Feed Post Drill

$3.60

A good, well made substantial drill at a price so low as to be within reach of everyone. If this drill saved you but one cent each day, it would pay for itself in less than one year. If you have even a small amount of drilling to do and have been using a brace or a bench drill it will save you far more than its cost in a short time. It is the same grade usually sold for $5.00 to $6.00 at retail. Upright column and feed screw are made of steel. Has long bearings, which insure easy running and prevent springing. Crank is adjustable to long or short turn as desired. Drill table can be raised or lowered, swung around out of the way, or removed so that fork can be used as a wheel holder. Drills holes up to ¾ inch and to center of 12-inch circle. Drill spindle is made of 1-inch steel, bored for ½-inch round shank drill bits and has up and down run of 3 inches. Weight, crated, about 58 pounds.

No. 9H3806 Price.....$3.60

Acme Two-Speed Self F Post Drill

$5.10

Note the Weights of Our Drills.

At $5.10 this drill represents more real val do more work with less labor and last long any drill you can buy elsewhere for less tha This is a strictly high grade self feed drill at price than is usually charged for a hand fe It is made of the best material, is strong, sub and durable, and fully capable of meet requirements of the average blacksmith steel upright column, shaft and feed **Bearings are all bored true to size and n** bitted, which makes the drill much more serv Self feed attachment can be set to fast or slo or thrown out entirely. Has steel extensio which can be adjusted to long or short turn table can be raised, lowered, turned out of or removed entirely when drill is to be u boring holes for tire bolts. Drills ¾-inch h to center of 12-inch circle. Spindle has r inches and is bored for ½-inch round shan Weight, crated, about 81 pounds.

No. 9H3807 Price.....

Acme Special Self Feed Blacksmiths' Post Drill.

$6.40

The largest, heaviest, strongest, highest class drill ever offered at anything like our price. Has steel upright column, drill spindle and feed screw, four long and perfectly straight bearings that cannot spring or get out of line, automatic self feeding device located behind the spindle and out of the way of the operator. Self feed can be set fast or slow, or thrown out entirely and drill changed to hand feed. Steel crank, adjustable to long or short turn as desired. Fast or slow speed instantly obtained by changing crank from one shaft to another on same side of drill. Table can be raised, lowered, turned aside or taken off entirely and fork used as a wheel holder. Spindle has run of 3 inches and is bored to take ½-inch round shank drills. Drills up to 1¼-inch holes and to center of 15-inch circle. Weight, crated, about 120 pounds.

No. 9H3816 Price.....$6.40

Acme Ball Bearing Self Feed Third Gear Blacksmiths' Post Drill

Drills Faster, Runs Easier, Is Better Constructed, of Higher Grade Material and Has More Good Features Than Any Drill Ever Offered for Less Than $10.00.

$7.10

BUILT AFTER OUR OWN DESIGN, made extra **strong at points of greatest strain and combines all the good features of the different drills of this pattern now being sold,** together with our **improved third gear** and other points which no other drills possess. Adapted to all kinds of work and especially recommended for general blacksmith and repair shops.

THE BALL BEARINGS, which are made of **the best die steel,** are placed between the chuck and headpiece of spindle, receive all the pressure and reduce the friction to almost nothing. The running of the drill is made a great deal easier and its life is more than doubled by these ball bearings.

THE SELF FEED ATTACHMENT can be set to a fast **or slow speed as the nature of the work requires,** or the dog can be thrown back and the drill fed by hand. Gives almost a continuous feed, thus preventing the drill bit from jamming into the work.

OUR IMPROVED THIRD GEAR enables the operator to **change from fast to slow speed by simply changing the crank from one shaft to another on the same side of the machine.** There is no left handed turning. The third gear also steadies the drill, an advantage when accurate work is to be done.

DRILL TABLE IS EXTRA HEAVY, can be raised **or lowered,** swung around out of the way or removed entirely so that fork can be used as a wheel holder. Has a strong steel crank, adjustable to long or short turn. Shaft and spindle are made of high grade steel. Spindle turns one and one-half times to each turn of crank on high speed; crank turns one and one-half times to each turn of spindle on low speed. Drills up to 1¼-inch holes and to center of 15-inch circle. Has up and down run of 3½ inches and is bored for ½-inch round shank drills. Weight, crated, about 113 pounds.

No. 9H3812 Price.....$7.10

STRAIGHT SHANK TWIST DRILLS.

Cannot be used in the ordinary bit brace. Must be used in a chuck made for round shank drills. The shank and twist are the same size. Hot forged from the finest steel, accurately ground and will outlast the ordinary milled drills offered by others, two to one. We guarantee the quality equal to any made. We recommend the purchase of a complete set with stand, as it is the handiest way to keep these drills. Stand has a hole for every size, with size marked near it.

Chucks with ½-inch shanks to take above straight shank drills shown on page 1066.

HOT FORGED BIT STOCK DRILLS.

No. 9H56720 These drills fit any bit brace and will drill steel, iron or other metals. Will bore any kind of wood without splitting and are not injured by contact with screws or nails. Our drills are hot forged and are tougher and stronger than milled drills as the best part of the steel is not cut away. All drills are accurately ground to micrometer gauge and sizes are exact. All our drills 3-32 and larger have solid forged steel shanks, thereby giving increased strength. Points of drills should be kept well oiled when drilling metal.

FORGES—EXCELLENT VALUES

Invincible Forge

$3.98

Compare this forge with others offered at the same price. Others would ask $5.00 to $8.00 for a forge not as good. A neat, compact light running agricultural forge. Strongly built, and all parts well fitted. This Invincible Forge has lever motion and well braced U shaped steel legs; castings are heavy and gears are properly fitted to assure easy running. Has hardwood handle and oak tanned leather belt.

DIMENSIONS: Forge stands 30 inches high, has 18-inch fire pan, 8-inch fan case. Weight, crated, about 83 pounds.

No. 9H31006 Price, with shield, as illustrated $3.98

No. 9H31013 Same as above, except has full enclosed hood, made of heavy sheet steel and with two sliding doors. Weight, crated, about 90 pounds.
Price $6.47

Whirlwind Forge

$5.13

Generates more blast with less labor and is the largest, heaviest and best constructed forge ever sold at anything like our price.

Not to be compared with the cheap light weight forges of similar design offered by others. No other forge at this price or near it will equal it for durability, quality and capacity.

WORKING PARTS. Made of highest grade material and fully warranted. Has self acting ratchet (no springs to get out of order). Handle made of varnished hardwood, belt of oak tanned leather.

HEARTH. Made of heavy cast iron, 21 inches in diameter, and fitted with first class tuyere.

LEGS. Mounted on three 1¼-inch U shaped steel legs, firmly braced, making it convenient to use on uneven foundations. These legs are very stiff and rigid and have spread enough to prevent tipping.

DIMENSIONS: Height, 30 inches; hearth, 21 inches in diameter; fan case, 8½ inches in diameter. Weight, crated, about 94 pounds.

No. 9H31008 Price.....$5.13

Direct Blast For

$8.25

Especially adapted for the larger contractors, bridge builders, repair and anywhere a high grade, medium forge is required. Has our new gear, which reverses the motion of giving a direct blast up through the instead of down and then up, as forges. Made of high grade throughout. Has very heavy hearth and center blast tuyere ball, extra fly wheel and U shaped steel legs, braced.

DIMENSIONS: Height, 30 inches; ter of hearth, 21 inches; diameter case, 9½ inches. Weight, crated, ab pounds.

No. 9H31011 Price, with half as illustrated.....

No. 9H31010 Price, with shield

Improved Vulcan Forge

REGULAR $15.00 VALUE.

$10.40

No. 9H31019 TANK.

Heavy, strong and durable; built for everyday shop use. Especially recommended for blacksmiths, machinists, miners, contractors and others who require a good, strong, dependable fire.

OUR VULCAN FORGES HAVE

Extra heavy castings.
Friction clutch gears.
Tempered steel ratchets.
Perfect anti-clinker tuyeres.
Varnished hardwood handles and oak tanned leather belts.

Each one is warranted perfect and guaranteed satisfactory.

A SIMILAR FORGE if bought elsewhere would cost you not less than $15.00.

A HIGHER PRICE doesn't mean greater value. A better forge for medium and light work cannot be made.

DIMENSIONS: Height, 30 inches; hearth, 35½x24½ in.; fan case, 12 inches in diameter. Weight, crated, about 180 pounds.

No. 9H31017 Price, with shield.....$ 9.50

No. 9H31018 Price, with half hood, as illustrated..... 10.40

No. 9H31019 Extra for water tank, to fit either of the above forges..... .90

TIGER STEEL FORGE.

$13.50

A SPLENDID FORGE FOR THE MONEY.

$13.50

Best for contractors, boiler makers, iron bridge and ship builders. A powerful blast forge, light enough to be moved about easily, yet strong enough for every purpose. Quickly taken apart and set up.

DIMENSIONS: Has 18-inch hearth, 9-inch fan case and is 32 inches high. Weight, crated, about 107 pounds. Shipped from factory near Chicago.

No. 9H31021½
Price $13.50

Acme Combination Fo

$18.00

REGULA $25.00 VALUE

Especially designed for use in large black shops, plow or railroad shops, or anywhere heavy work is done and a strictly first class is required. In this machine we have com our Tiger Steel Blower and our Coal Saver with a high grade cast forge, which combi gives the blacksmith the very best results. Tiger Blower has straight cut gears, steel shaf composition bearings, made and assembled per It can be turned forward or backward and duces a powerful blast. Our Coal Saver does not get clogged with clinkers and coal as it does a center and side blast, will get more out of the coal than any other and save you dollars in cost of coal alone. The forge is made of cast iron and should last a lifetime. blower is extra large and the blast is direct to fire, easy to operate, and the after blast is and lasting.

DIMENSIONS: Size of hearth, 45½x31½ in diameter of fan case, 11 inches; height, 30 in length over all, 53 inches. Weight, crated, abo pounds. Shipped direct from factory near Ch

SLATE SURFACED ROOFING, Lasting Colors, $2.25 per Roll, Worth $4.0

Digitized by Google

OUR TIGER BLOWER

For the up to date blacksmith who builds his own forge of brick, clay or stone. For those who require a strong, steady, even blast there is no better blower made at anything like our price. It will easily take care of any work that comes to the ordinary blacksmith shop.

OUR TIGER BLOWER has flat, straight cut gears, steel shafts and composition bearings, properly assembled and geared up so that a strong, powerful blast is furnished with but little labor and almost no noise. Gear case is oilflight and dustproof, permitting gears to run in continuous bath of oil. Blower case can be raised or lowered. Crank turns forward or backward.

DIMENSIONS: Height, 43 inches; fan case, 11 inches in diameter; fan, 9¾ inches in diameter. Weight, crated, about 115 pounds.

No. 9H3926 Price, complete with piping and heavy anti-clinker tuyere, as shown **$10.92**

NIAGARA SPIRAL GEARED BALL BEARING BLOWER

$14.98

The best hand blower made. Runs easier, develops more blast and is better in every way than the blower which was heretofore thought the best. Constructed on exactly the same principle as other spiral geared blowers, but there is a more liberal use of phosphor bronze and Swiss steel than in other makes. Has cut spur and spiral gearing and gears are so arranged that bronze comes in contact with steel, which makes them last longer and run smoother than steel against steel. Shafts, ball bearings and gears run in a continuous bath of oil, which prevents heating and greatly adds to the life of the blower. Fan case can be raised, lowered or turned in any direction, and the crank can be turned forward or backward as best suits the operator.

DIMENSIONS: Tuyere is extra large, size 10x8¾x4½ inches (inside measurement). Blower has 12-inch fan case and can be adjusted from 44 to 48 inches in height. Weight, crated, about 137 pounds.

No. 9H3935 Price, complete with piping and tuyere, as shown **$14.98**

BLACKSMITHS' HOOPED BELLOWS

The leather on most bellows is nailed to the wood, with nothing between the nail heads and the leather. Our bellows are all **hooped,** then nailed, which prevents the nail heads from pulling through the leather. In making our bellows we use only the best specially prepared cowhide leather and thoroughly seasoned white-wood, basswood and pine. There are no better bellows made.

ACME AMERICAN WROUGHT ANVILS

Superior in design, material and finish to any other wrought anvils on the market. Made especially for us and sold only by us under our own guarantee. Our Acme anvils at prices quoted below represent more real value than you can possibly secure elsewhere.

Our ACME ANVILS are made of two pieces of tough wrought iron welded at waist. The face is made of a single piece of tool steel securely welded to the body and warranted not to come loose. The face, trued by a special machine so there are no hollow or uneven places, is perfectly tempered, making it hard without being brittle, and tough without being soft. Has long, perfectly shaped horn and heel and the base has sufficient spread to insure stability and prevent tipping.

ONLY 8½c A POUND

Price, elsewhere, a 12c pound

To prove that our Acme is the best wrought anvil ever offered, we sell it under our guarantee to take any one of them back at our expense within thirty days after you receive same if it is not equal to **or better than any anvil you ever used.**

FULTON ADJUSTABLE IRON BENCH PLANES

WITH SMOOTH OR CORRUGATED BOTTOMS.

All castings are heavy and well proportioned, smooth and nicely finished, strong and durable. The faces are ground perfectly true. Working parts made by automatic machinery and are all interchangeable. Cutters of best double refined crucible cast steel are carefully made and tempered to cut and hold an edge. Handles and knobs genuine rosewood, trimmings highly polished and in general appearance and finish Fulton planes are the handsomest and most attractive line made.

Illustration of Corrugated Bottom

OUR ECONOMY FLOOR SCRAPER, $11.50

Does the work of three men with hand scrapers; saves time and labor; leaves the floor smooth and level; does away with the hard back breaking job of scraping floors by hand. As operator draws scraper toward him, the blade works upon the floor similar to the action of a hand scraper, the weight of the machine giving force to the pull. This scraper does as fine work as any similar tool on the market, no matter what price may be asked for it.

Blades are 6 in. wide, made of best refined crucible steel, tempered very tough and hard. Wheels are rubber tired to prevent scaring floor. Entire tool is neatly finished. Shipping wt. about 125 lbs. Price includes one extra blade.

No. 9H55639 Price, complete. $11.50

Starrett's LEVELING INSTRUMENT

$9.63 OUR PRICE

Others ask $12.50 for this same level.

Invaluable for leveling foundations and walls, setting machinery, floor timbers and sills, running lines, ditches and drains, grading roads or hillsides. Instrument complete consists of upper plate with graduated arc divided by degrees, tripod, tripod head, plumb bob and line. Tripod is made of iron, japanned, improved extension legs are separate from tripod. With this improvement over the old style you can make the height from 2 feet 6 inches to 4 feet 6 inches. Sight tube, 12 inches long, is brass, nickel plated, with small eye opening at one end and usual cross wires at other. Level case and graduated arc are also nickel plated and the other parts are nicely japanned. No magnetic needle or complicated mechanism about this instrument and, with the complete directions we furnish with each one, anyone can use it and get perfect results.

BIGGEST VALUES — BIT BRACES — GUARANTEED GOO

The Improved Fulton Special Ratchet Bit Braces

FRICTIONLESS ROLLER BEARINGS Heavily nickel plated and nicely finished throughout. For beauty, strength and workmanship there are no superior braces made.

GUARANTEE—Order one of these braces, give it a fair trial. If you are not satisfied in every way, return it to us and your money will be returned to you.

SWEEP—Special high grade steel, 15-32 inch in diameter. Will not bend or give way under heaviest pressure.

HEAD—Polished cocobolo, nicely finished and steel clad to protect it from being split or bruised. It is attached to the sweep by means of a steel quill that revolves on roller bearings. The rollers revolve between hardened steel washers which prevents any friction or wear.

HANDLE—Cocobolo, with brass bushings inserted in the ends to prevent it from splitting. It revolves on patent adjustable tapered steel collars and bearings. By means of set screws, any looseness from wear may be instantly taken up. The ends of the handles bear on the tapered shoulders of these adjustable collars and not on the sweep. This is the latest improved and finest working handle made.

Sectional view of head, showing roller bearings.

Sectional view of handle, showing adjustable collar and bearings.

10-Inch, $1.45 EQUALS ANY $2.50 BRACE.

RATCHET—Simple in construction, easily operated, strong and durable. The ratchet teeth are cut on the end of the steel body that revolves in the socket attached to the sweep and are concealed and protected by this socket. The ratchet pawls are solid blocks of steel fitting squarely into the teeth of the ratchet. (The hook pawl opener is shown in illustration.)

SLEEVE—Made of malleable iron, octagonal pattern. Nickel plated and highly polished. Handsome in appearance.

CHUCK—Has forged steel jaws, which open automatically to receive the shank of the bit. Takes regular square shank bits, and round shank bits up to ⅜ inch in diameter. Will take a large size expansive bit.

FINISH—All metal parts are highly polished and nickel plated. Head and handle are natural finish, nicely polished.

HERCULES DOUBLE BALL BEARING RATCHET BIT BRACES. $1.77

Most ball bearing braces have ball bearings in head only, but our Hercules has steel ball bearings in both head and chuck. Ball bearings in head make this brace run with almost no friction, while ball bearings in chuck enable jaws to be clamped on to a bit or drill with a never slip grip. Our Hercules brace has heavy cold rolled steel sweep and polished cocobolo head and handle. Metal parts nickel plated, chuck knurled full length. Has forged steel alligator jaws, holds either round or square shank bits or drills.

$2.25 BRACE AND BIT SET IN HARDWOOD BOX.

No. 9H56551 The highest grade and most complete brace and bit set ever offered at anything like our price. Fully equal to sets sold by others at $3.50 to $4.00. The tools alone if bought elsewhere would cost considerably more than we ask for the complete outfit, to say nothing of the stained hardwood box. Consists of one high grade ball bearing brace, 10-inch sweep, cocobolo wood parts, steel clad head and alligator jaws. Eight extra selected cast steel double spur auger bits, sizes ¼, 5-16, ⅜, ½, ⅝, ¾, ⅞, and 1 inch. Three German pattern solid steel gimlet bits, sizes, 1-16, ⅛ and 3-16 inch. All in neat, strong hardwood box with brass hinges and hook.

Price, per set.....$2.25

No. 9H56553 Brace and Bit Set as described above, except has Irwin pattern auger bits.

Price, per set.....$3.05

$5.75 FULTON BRACE AND BIT OUTFIT COMPLETE.

66c Fulton Special Nail Hammers

Solid tool steel, full nickel plated, black enameled handles; the best and handsomest hammers possible to produce. Fulton Special Hammers are forged from best refined crucible cast steel. Faces and claws are tempered just right, heads are so proportioned as to give them the proper hang. Claws are split to such a fine point they will draw the smallest brad as well as the largest nail; handles are made of selected second growth white hickory put in with iron wedges, so they will not become loose. We could not sell you a better hammer if we asked twice our price; a better hammer cannot be made at any price.

No. 9H57702 Size No.	1	1½	2

Price	68c	67c	66c

53c Fulton Utility Nail Hammer

A high grade combination nail hammer, nail puller, wrench and staple puller.

Our Fulton Utility Hammers are forged from best refined crucible cast steel with faces and claws tempered tough and hard. Heads are properly shaped; claws are carefully split and handles are selected second growth white hickory tightly wedged. The right claw is made longer than the left and shaped so as to go under and draw any ordinary staple. Under side of claws is notched to form a wrench which takes and turns nuts on all size bolts from ¼ to ½ inch. Head is full polished and handle is smoothly finished. Weight, including handle, slightly over 1 pound.

No. 9H57716 Fulton Utility Hammer. Price.....53c

SPRINGFIELD FORGED STEEL HAMMERS.

26c

Excellent value for the price. Made for mechanics' use. Springfield hammers are forged from solid cast steel, are nicely polished and are much better than those usually sold at 48 to 60 cents each. C. E. JENNINGS & CO.'S FINE MECHANICS' TOOLS

"ARROW HEAD BRAND."

An old established, well known line of mechanics' tools that have been on the market for years. The name Jennings on a tool is all the guarantee anyone need want.

All Jennings "Arrow Head Brand" Saws are made in the good old way, by hand.

JENNINGS No. A7½ NARROW BLADE HAND SAWS.

Patent ground and tempered, full polished. Runs as easy and smooth as a fine saw worn narrow by use. The 26-inch size is 6 in. wide at butt and tapers to 1½ in. at point (other sizes in proportion). Made of extra refined spring steel, ground thin on back, hand made throughout, has carved handle, improved screws and is fully warranted.

No. 9H5225 Jennings No. A7½ Panel or Hand Saws.

Length	Points to inch	Price

JENNINGS SPECIAL HACK SAW OUTFIT.

Gives you a saw suitable for every purpose for which a hack saw is ever needed, and of higher quality than you could possibly get elsewhere. Frame is extra heavy steel, full nickel plated, and is adjustable to hold 10, 12 or 14-inch blades. Frame is well finished, strong and durable. Faces blades to four different angles and is instantly adjustable to hold different length blades. Blades are highest quality, made of best spring steel, tempered very hard, so hard they cannot be filed, but last four times as long without filing as an ordinary blade with one filing. Outfit consists of frame and six blades as follows: One 10-inch coarse (14-tooth), one 10-inch fine (24-tooth), one 12-inch coarse (14-tooth), one 12-inch fine (24-tooth), and two 14-inch coarse (14-tooth).

No. 9H5245 Outfit, complete as above.....$1.85

JENNINGS SOCKET FIRMER CHISELS IN SETS.

No. 9H5280 One of the best and handsomest sets of chisels ever offered. Blades are made of best double refined crucible tool steel, properly tempered, highly polished, ground sharp and hand honed. Edges are beveled, sockets perfectly formed. Each chisel tested in hardwood before leaving the factory. Handles are selected white hickory, tipped with four layers of solid sole leather and held on with three hardwood dowel pins. Case is made of selected wood, has locked corners, spring to hold each chisel and is handsomely finished. Sold only in full sets of twelve chisels. One each size, ⅛ to 2 inches.
Price, per set, complete.....$5.50

JENNINGS SHORT SOCKET FIRMER CHISELS.

No. 9H5320

Light, short, handy to use. Same high quality as other Jennings chisels on this page; ground sharp, hand honed and fully warranted. Handles polished cocobolo, blades highly finished. Blades about 3½ inches long from shoulder, very convenient for getting down close to work. In sets of six, one each ¼, ½, ¾, 1, 1¼ and 1½ inches, in handsome wood case.
Price, set.....$2.75

JENNINGS SHORT SOCKET FIRMER GOUGES.

No. 9H5325

Easy to work with. Blades about 3⅝ inches long from shoulder. Best crucible tool steel, sharpened and hand honed, outside beveled. Handles selected hardwood, tipped with four layers of solid leather. In sets of six gouges, one each ¼, ½, ¾, 1, 1¼ and 1½ inches, in wood box.
Price, set.....$3.25

JENNINGS SOCKET BUTT CHISELS.

No. 9H5330 Extra short. Total length, including handle, only about 8 inches. Best crucible tool steel; ground, hand honed and ready for use. Blades bevel edged, handles knob pattern, tipped with four layers solid leather. In sets of five, one each 1, 1¼, 1½, 1¾ and 2 inches, in handsome hardwood case.
Price, set.....$2.70

JENNINGS FOLDING HANDLE DRAWING KNIVES.

Folds into small space, goes into hand tool case or shoulder chest; folded handles protect cutting edge. Blades made of best crucible steel, properly tempered and hand honed. Tangs extend through handles.

No. 9H5300 Same as above, fitted with first quality hardwood handles.

Length cut, inches	8	10	12
Price	$1.30	$1.50	$1.70

No. 9H5305 Same as above, but fitted with polished cocobolo handles. Handsomest and best drawing knives made.

Length cut, inches	8	10	12
Price	$1.60	$1.90	$2.20

JENNINGS RAZOR BLADE DRAWING KNIVES.

No. 9H5310 An extra quality hand forged, hand honed draw knife, finely finished and with polished cocobolo handles. Unexcelled for quality, and one of the handsomest tools ever produced. For evenness of temper and cutting qualities this knife has no superior. Fully warranted.

Length cut, inches	8	10	12
Price	85c	$1.00	$1.15

No. 9H5315 Same as above as to quality and finish, but fitted with plain hardwood handles instead of cocobolo.

Length cut, inches	8	10	12
Price	65c	80c	95c

JENNINGS No. 1½ SINGLE TWIST EXTENSION LIP AUGER BITS. $5.50

No. 9H5260
Set of Thirteen Bits. One each, ¼ to 1 inch, in heavy canton flannel lined canvas roll. Rolls up into space 11x3 inches. A handy outfit of the finest auger bits made.
Price.....$5.50

For all kinds of boring, in hard or soft wood, but especially adapted for hardwood and end boring. Having but one lip and one spur they offer but little resistance in working. Will lead into end of hard wood without being forced and, being open in the twist, clear easily. They cut with the grain or across the grain, bore a smooth hole and will not split even thin seasoned panels. Full polished finish. Sold only in full sets of thirteen bits.

No. 9H5265
Set of Thirteen Bits. One each ¼ to 1 inch in hardwood case. Case very strong, has locked corners springs to hold bits in place, and is handsomely finished.
Price.....$5.50

Fulton Nail Cutter Saw

$1.40

No. 9H59036 Mechanics, don't spoil your high grade saws on repair work, housewrecking or second hand lumber, BUY ONE OF OUR NAIL CUTTER SAWS. They are especially suited for carpenters, plumbers, electricians, tinners or any one who requires a saw that will cut right through wood, nails, sheet metal, wire, gas pipe, etc., quickly and without injury to the saw. Like our other Fulton Saws, this Fulton Nail Cutter Saw is made of the very best crucible saw steel, hand made, hand filed and tempered by a special process which makes it exceedingly hard but very tough. Not brittle, like most of the metal cutting saws sold elsewhere. The Fulton Nail Cutter Saws can be filed when they become dull, but do not require setting, being taper concave ground. Made in one size only, with 18-inch blade. Price..... **$1.40**

FULTON SPECIAL BUCK SAW.

Cuts fast and easy, runs a long time without filing and setting and is equal in every way to saws sold by others for $1.00 and up. Blade is extra thin and narrow, offers but little resistance to the wood and cuts well without bearing down on frame, making our Fulton Special a great favorite with professional wood sawyers, but it is equally as well suited for farm and home use. Anyone who wants a strictly high grade buck saw will do well to order our Fulton Special. Frame is made of carefully selected hardwood, with double riveted brace, is smoothly sandpapered all over, then varnished two coats. Has loop pattern rod, heavily tinned with japanned turnbuckle. Blade is best clock spring steel, tempered and hardened, and fully warranted. Teeth are V shaped, five points to the inch, full bevel, hand filed and hand set. Blade is 1½ inches wide, blued finish and handsomely etched, the one we recommend for general use.

GENUINE LANGDON ACME MITER BOXES.

The most accurate, convenient and complete miter boxes made. Possess all the best features in other boxes and besides have the following improvements: Guides for holding saw up out of way, stock guides for holding work in place, length gauge for duplicate lengths and lock for instantly securing saw at any angle. Notches for positive angles and graduated arc are in front with degrees plainly marked. Ribbed back and bed give ample clearance for sawdust, and ribs on bottom help hold work without marring it. Size 1 provided with solid swinging lever and has capacity of 7½ inches at right angles and 5 inches at miter. Sizes 2 and 2½ provided with extension levers by which front post can be extended, giving a capacity of 10¼ inches at right angles and 7 inches at miter. Price includes high grade back saw. Weight, boxed, about 37 pounds.

CARPENTERS' STEEL SQUARES

Well made, nicely finished, accurate and give satisfaction. Every steel square is guaranteed as to quality, finish, and warranted true.

$1.44 Royal Copper Finish Square.

Factory No. 100, R. C. R. An extra fine square for high class mechanics. The very best in quality and the handsomest finished steel square made. Heavily copper plated and is as nearly rustproof as a steel square can be made. Has deep, clear figures and graduations filled with white enamel, which makes them easy to read. Body, 24x2 inches; 16-inch tongue. Marked on face 1-16, ⅛ and ¼-inch spaces; on back, 1-32, 1-12 and 1-10-inch spaces. In addition it has brace measure, eight square and patent rafter table, as shown in illustration, which gives the measure of rafter for any one of seven pitches of roof.

No. 9H57324 Price, including full directions for using $1.44

JENNINGS TAKE DOWN STEEL SQUARES.

The first really successful take down square ever brought out and the greatest improvement ever made in steel squares. Easy to take apart and put together, absolutely accurate. Spring takes up wear and keeps square tight and rigid as when new. Goes into space 4x24 inches, has canvas bag to protect square from rust and damage. Unlike other folding and take down squares, there are no screws or bolts to get loose and there is absolutely no play, the solid shoulder insuring accuracy. Guaranteed satisfactory or money returned. Has 16-inch tongue and 24-inch body. Spaced on front in 1-16 and ¼-inch spaces; on back in 1-12 and ¼-inch spaces. In addition it has brace measure and Essex board measure tables. Marks are deep and plain, figures clear and distinct. Full directions with each square. Illustrations show manner of putting square together and canvas bag for carrying.

RAFTER SQUARE.

89c BLUED FINISH RAFTER SCALE STEEL SQUARE. Factory No. 3 B. R. A mechanics' square, in a durable finish that always looks well. Marks are deep and plain, figures stand out clear and distinct. Body 24x2 inches, tongue 16 inches long. Face marked 1/16 and ¼-inch spaces, back 1/32 and ¼-inch spaces, and in addition has brace measure and rafter scale as shown in upper illustration with feet and inches in full. A usual $1.25 value.

No. 9H57344 Price 89c

SPECIAL SIZE SQUARES

69c A NEW SIZE in high grade steel squares. Body 18x1½ inches; tongue, 12x1 inch. Blued finish, marked deep and plain. Large enough for all ordinary work. The lightest and most convenient square on the market for tool boxes, shoulder chests, etc. Marked on face 1-16, ⅛ and ¼-inch spaces; on back 1-12 and ¼-inch spaces. Usual price, $1.00.

No. 9H57322 Price, only 69c

51c NICKEL PLATED STEEL SQUARE. Body, 12x1½ inches; tongue, 8x1 inch. A convenient size for small tool chests, shoulder boxes, home use, etc. Marked on face in 1-16, ⅛ and ¼-inch spaces; on back in 1-100, 1-12 and ¼-inch spaces. Warranted accurate. The usual price of this square is 75 cents.

No. 9H57374 Price 51c

64c POLISHED FINISH STEEL SQUARE. Factory No. 100. A first quality square in a plain polished finish, absolutely accurate, a regular mechanics' tool. Size body, 24x2 inches. Face marked 1-16 and ¼-inch spaces. Back marked 1-100, 1-32, 1-12 and ¼-inch spaces. Also has brace measure, eight square and Essex board measure. This square considered a bargain in regular stores at $1.00.

Length of tongue	16 Inches	18 Inches
No. 9H57338 Price	64c	65c

86c BLUED FINISH STEEL SQUARE. Factory No. 100 B. An extra quality steel square in a pleasing durable finish, the kind of square that good mechanics use. Markings are deep and plain. Figures stand out clear and distinct. Exactly the same as our No. 9H57338 above, except blued instead of polished. Regular price elsewhere, $1.25 to $1.50.

Length of tongue	16 Inches	18 Inches
No. 9H57334 Price	86c	87c

46c POLISHED FINISH STEEL SQUARE. Factory No. 3. A first quality steel square, with plain simple markings. Preferred by many carpenters, and the very square for use about the home or farm. Body, 24x2 inches. Tongue, 16 inches long. Face marked 1-16 and ¼-inch spaces. Back 1-12 and ¼-inch spaces. Markings are deep and plain and absolutely accurate.

No. 9H57354 Price 46c

39c POLISHED FINISH STEEL SQUARE. Factory No. 7. One of our most popular sellers on account of its low price and good quality. Absolutely accurate, and the very square for use on wet timber, in dirty places or where a finer finished higher priced square might be rusted or soiled. Tempered steel, excellent value. Body, 24x2 inches; 16-inch tongue. Face marked ⅛, ¼ and 1-inch spaces. Back, ¼ and 1-inch spaces. Has Essex board measure.

No. 9H57364 Price 39c

24c POLISHED IRON SQUARE. Factory No. 24. Size body, 24x2 inches; tongue, 12x1½ inches. Marked in ⅛-inch spaces on both sides. The best square made to sell at such a low price. We do not warrant it, however, and always recommend the purchase of a steel square.

No. 9H57388 Price 24c

Machinists' Steel Squares and Rules on page 1063.

THE STEEL SQUARE AND ITS USES, INCLUDING ROOF FRAMING, PITCHES, HOPPERS AND STAIR BUILDING, WITH COMPLETE QUESTIONS AND ANSWERS. IN TWO VOLUMES. JUST PUBLISHED.

A complete, thoroughly up to date Encyclopedia on the practical uses of the Steel Square. Treats on all subjects to which the steel square can be applied. Every subject covered in the original Fred T. Hodgson "Steel Square" books is to be found in this work, but these subjects have been greatly enlarged and thoroughly revised. **Special chapters are devoted to Roof Framing and Stair Building. There are complete questions and answers covering every use to which the steel square can be put.**

The set (2 volumes; size, 6x9 inches) contains over 600 pages, being the largest books on the steel square published. Bound in cloth.

No. 3H9110 Price, per set (two volumes) **$1.33**

If mail shipment, postage extra, per set, 30c.

DAVID BRADLEY FARM IMPLEMENT

The Only Line of High Quality Standard Farm Implements Sold Direct From Factory to U

We own and operate the big eighty-year old David Bradley factory. We have eliminated all the profits of middlemen. The farmer now buys these famous farm tools direct from the makers at factory cost with but one profit added. Such incomparable quality and values as you w throughout our line of David Bradley implements, backed by the a protection of our unlimited guarantee, certainly merit your orders.

OUR PURCHASE OF THE BIG DAVID BRADLEY FARM IMPLEMENT FACTORY HAS PROV ONE OF THE GREATEST OF MODERN BENEFITS TO FARMERS.

We have made possible to them a yearly saving of millions of dollars. No longer are they required to pay the exorbitant profits of middlemen in order to obtain high quality, standard farm implements; nor need they content themselves with obsolete or inferior makes of goods, to which a dealer's limited stock may be confined.

The success which has attended our efforts to give our customers quality, value and service in Bradley goods, such as no other implement manufacturer or dealer had ever given, has greatly exceeded even our own expectations. From every section of the country comes a constant flow of orders and every mail brings us expressions of satisfaction from our customers, telling of the superiority of Bradley quality, the surprising savings in price we have made them, and congratulating us upon the efficiency of our service. Read some of them on the following page.

No one else is so well qualified to serve your needs in farm implements. We have the best equipped factory and most competent implement manufacturing organization in the world at our command. Our prices speak for themselves, and need but a comparison with those of others to prove the money we can save you.

We promise your order the consideration and intelligent handling it deserves, while the Bradley reputation for quality, backed by our guarantee of absolute satisfaction or your money back, insures you against any possible loss or disappointment.

The big David Bradley factory is the oldest plow and implement factory in America. It was founded by David Bradley, America's pioneer plow maker, in 1832 (eighty years ago), and in all this time its product has been confined entirely to farm tools of the very highest class. This big plant covers nearly forty acres of ground and there is not a more perfectly equipped factory of its kind in existence. Our purchase included not only the grounds and buildings shown in the illustration, but all machinery, dies, patterns, etc., designed especially for producing David Bradley goods, together with the many valuable patents which cover them and prevent their manufacture by others. We retain in our employ the complete organization of expert plow makers and other mechanics, most of whom have worked a lifetime in this big plant. Every one of these men knows the high standard of quality demanded in David Bradley goods and with their faithful co-operation we not only continue to make David Bradley plows and implements just as good as David Bradley ever made them, but we are striving to better them wherever such a thing is possible. The David Bradley factory is located 54 miles south of Chicago and freight rates from there are the same as from Chicago. This central location is favorable to everyone. It not only means a low rate of freight to all our customers, but it means a low rate of freight to us on all raw materials, which assists us greatly in economical manufacture. This you get the full benefit of in our low prices.

For Eighty Years David Bradley Implements Have Been the Accepted Standard.

Other implement manufacturers have endeavored to copy them, and while they might to a certain extent copy the design, they cannot copy Bradley quality. No other factory can lay claim to such far reaching experience in designing and building farm implements, and it is just as impossible for less experienced manufacturers to duplicate the quality of a Bradley implement as it is for them to duplicate the low prices we name.

On our 18-acre experimental farm we thoroughly test out and perfect David Bradley implements. No improvement is adopted, no change made, and no new tool is offered our customers until it is thoroughly tried out, not only in our own experimental grounds, but in different sections of the country, so that we know it suits all soil conditions and the purpose for which it is intended. David Bradley experimented at the expense of his customers, neither do we. When buy a David Bradley tool from us, you can rest assured that its struction has been thoroughly tested and tried out, not only factory for quality of materials, etc., but in the field for working wearing qualities, and proven absolutely perfect.

Our guarantee affords you greater protection than that of any manufacturer or dealer. Most makers agree to replace defective ma within a year; so do we. And, moreover, we **pay the transport charges** on parts sent to replace any proving defective in matern workmanship. But we guarantee more than this. We guarantee **your order correctly,** and hold ourselves responsible for all mistakes carefully do our implement men supervise the orders that it is al impossible for a shipment to go out wrong, even should our cos make a mistake. We guarantee to **fill your order promptly,** becaus big David Bradley factory carries tremendous stocks of everything there. We guarantee every implement shipped you to be new and fresh from factory. We guarantee that the **shipment will reach promptly and in perfect order without loss or damage.** If by any c your shipment should go wrong or any part of it be damaged, we replace it free of all charge to you. Such protection is worth a deal to you and is something to consider when buying implements. run absolutely no risk when buying implements from us. We assum full responsibility for making every transaction with you a satisfa one. No farmer acting in his own interests can afford to place a do worth of his implement business elsewhere.

Try Any David Bradley Plow or Implement Our Risk.

We accept your order with the understanding that you are to take any David B plow or other implement purchased from us and try it out thoroughly in your own and under any conditions that one could impose upon a tool of its kind. Try it out side of any similar tool of other make. Give it every test you can possibly think of. the David Bradley tool does not satisfy you absolutely and convince you beyond all that it is in every way the superior tool we claim, and as good a tool as you can buy elsewhere at any price, we expect you to send it back to us at our expense and return to you the full price you paid for it and freight charges.

REPAIRS: HOW TO ORDER

You are always sure of repairs when you use David Bradley I ments and you are sure of getting them quickly. We have patterns every David Bradley implement ever made and can always suppl repair, no matter when the tool was made or where you bought it David Bradley user need ever worry about repairs. We sell repair about half what a dealer charges, so you save money on extra parts as you do on complete David Bradley implements. Our factory has a complete stock of repairs so we can serve you quicker than a dealer, who seldom, if ever, has the particular part you need. You not waste time writing for repair prices; if you do not know our for the part wanted just write and tell us the name of the imple give name or description of part and all numbers, letters or other appearing on the old part and enclose an amount of money whic think will cover the cost. We will immediately ship the part to y return any difference in your favor. If you are in urgent need of you may **telegraph us,** being careful to state names and numbers completely as you would in a letter, and we will make immediate ment. Address all such orders, telegrams and correspondence to

WRITE US—Our Implement Experts Are at Your Service

We have in our employ several of the best informed farm implement specialists in America. It is their pleasure to answer inquiries and give advice to our customers. If you are in doubt as to the exact plow or implement you should buy, do not hesitate to write us, giving us complete information regarding the kind of work you wish to do, soil conditions, etc. We will gladly favor you with our experts' advice.

SAVED 30 PER CENT. RECEIVED BETTER GOODS AND BETTER SERVICE.

Thompson, Iowa.

Sears, Roebuck and Co., Chicago, Ill.

Having thoroughly tried out the Bradley implements bought of you this spring, I wish to say that every one is satisfactory and cannot be excelled. Before placing my order with you I examined and priced similar goods in all nearby towns and found dealers' prices as follows:

For a 16-inch sulky plow, with 4-horse eveners, $47.00; tongueless cultivator, $15.00; two-row cultivator arranged to work three horses, $55.00.

I could not see where any of them were better in any way than the Bradley goods, so I placed my order with you. Your Bradley sulky plow with 4-horse eveners and attachment cost me $38.40. Your tongueless cultivator $9.93, and your Tu-Ro Cultivator with 4 and 5-horse attachment, $43.86. The freight on the three implements was $4.91 and my postage expense was 9 cents, making a total of $91.19, a saving of $26.81 on three ordinary farm implements, or about 30 per cent on the investment.

But this is not all. I have tried other makes and have the first one to find that I would think of trading for. I have now broken over 125 acres of tame sod with the Bradley sulky plow, some of it in extremely bad shape, much of it so rough that it looked foolish to try to turn it over, and I have not had to stop a minute to fix anything or tighten a bolt. Part of the time I use three ordinary farm horses and part of the time four very light ones, but it moves right along at the rate of about three acres per day of nine hours. I have done a perfect job in every way and can throw the plow in or out of the ground while moving a distance of one foot. The levers are so handily arranged that it is a pleasure to work with it and the draft is 25 per cent lighter than any 16-inch sulky I have ever run. I am now running the Bradley Common Sense Cultivator with a pair of ponies whose combined weight is 1,800 pounds and a fourteen-year old boy is handling it. I put him in a field of exactly 20 acres, so badly infested with quack grass that it looked hopeless. He cross plowed this field with this light team, very soddy ground and hard plowing, in three days and the quack grass will be whipped by one more such plowing. The boy will use no other cultivator, although we have two other good ones with tongues. For a perfect corn plow give me the Bradley Common Sense.

We are using the Bradley Tu-Ro Cultivator with three colts, weighing less than 1,800 pounds each, and my son, who uses it, declares they furnish all the power needed, but owing to our ground being new sod, I am inclined to think four horses would be better. No one-row riding cultivator can do better work or be handled easier than a Bradley Tu-Ro. I have had all kinds of objections offered by local dealers to buying out of town goods, principally that it is impossible to get repairs, but I have dealt with Sears, Roebuck and Co. for fifteen years and have found it much easier and far cheaper and quicker to get repairs from you than from any local dealer I ever bought of.

Your method of doing business is only one of the evolutions of time and saves the purchaser an average of 20 per cent on his goods. The Bradley goods are unexcelled; in fact, the world's standard, and the saving to the farmers by your purchase of this factory cannot be computed. Wishing you success, I remain,

Yours very truly,
R. F. OBR.

THE FINEST IMPLEMENT HE EVER USED.

Hebbronville, Texas.

Sears, Roebuck and Co., Chicago, Ill.

Gentlemen:—I received the Little Jap Cultivator in good condition. I had been waiting for a little rain so I could give it a good test, but got tired waiting. Our last rain was nearly two months ago, so I gave the cultivator a trial today in perfectly hard dry ground. I tried it in clean dry soil, very grassy, and I want to tell you that the Little Jap is the finest implement I ever used. Both the shovels and the Gopher blades do fine work. What will it do in soil in good condition? I have used several standard makes of cultivators, but none of them will at all compare with the Little Jap. The pivot arrangement of the gangs and seat is fine. The whole machine is substantial, strong and well finished. I have three other riding cultivators which weigh 360 pounds each, and I thought they were the lightest draft that could be made. Imagine my surprise when my team walked off with the 460-pound Little Jap with hardly any effort. It is the lightest draft cultivator I ever used. I want to congratulate you for putting out such a fine implement. No other on the market today will approach it. I ordered the Little Jap to test out before the approach of the New Year, as I wanted several new cultivators in the spring. You will certainly receive my order. I wish every farmer in the country could see the Little Jap work.

Yours truly,
A. J. AYRES.

HIS NEIGHBORS ALL WANT A BRADLEY TU-RO.

R. F. D. No. 4, Box 82, Blissfield, Mich.

Sears, Roebuck and Co., Chicago, Ill.

Gentlemen:—I want to say that the David Bradley Tu-Ro Cultivator I bought of you is the most satisfactory cultivator I ever owned. No more single row cultivators for me. I hitched three horses to the Tu-Ro, one an unbroken colt, and started in to work. My boy learned to operate it in no time and the work he did with the machine was an eye opener to my neighbors. At least twenty-five farmers have been over to see my Tu-Ro work, and I think nearly every one of them will get one. If anyone wants to know how good a machine your Tu-Ro is, tell him to write to me.

Yours truly,
A. J. SELL.

WHAT AN EXPERIENCED FARMER SAYS.

R. F. D. No. 1, Mt. Vernon, Iowa.

Sears, Roebuck and Co., Chicago, Ill.

Gentlemen:—I am fifty-two years old and did my first plowing with a single shovel plow, then the double shovel, next the walking cultivator and then the sulky plow. Have used more different kinds of cultivators than most men, and think I can plow corn as good as any man living, and I must say that the Little Jap is the best I ever used for good work and easy running, both on man and team. It is the only cultivator for the hired man. You regulate it and send him into the field and he has simply got to plow corn.

Yours truly,
A. H. KNAPP.

Edwin Spindel, Edinburg, Ill., says—I have a Bradley Planter that I have used for fifteen years and it does the work as good as ever.

J. M. Arnold, Iuka, Ark., says—Your Bradley Stalk Cutter reached me in perfect order and works perfectly, and I do not see how it could be any better. I would have to pay one-fourth more at home than you ask for your cutter.

Marion Allen, Caddoa, Col., says—I like your David Bradley Reversible Disc Harrow for this country. It can be used for so many things. It makes a good lister, harrow or plow and you can make small ditches with it to water your crops.

Wm. Green, White Rocks, Utah, says—The David Bradley XX-Rays Plow I bought from you gives the best of satisfaction. I have broken up 50 acres of new ground and it does as good work as any plow you would have to pay $63.00 for here. I shall recommend the David Bradley Plow to all in my part of the country.

Jas. Davison, Opal, Wyo., says—The Bradley Prairie Breaking Plow came all right. I don't know of any better.

Axel Nelson, Hebo, Ore., says—Your David Bradley Plow arrived in good order and I am well satisfied with it.

J. A. Harding, Oroville, Wash., says—The shipment reached me in good condition and everything very satisfactory. I know of no cultivator adapted to my use that I like as well as the Bradley Ten-Shovel Cultivator, and I have used very near all kinds made. I saved at least $10.00 or $15.00 on the cultivator.

L. Fashauer, Santa Cruz, Cal., says—The David Bradley Reversible Disc Harrow reached me in good order. We are always well pleased with your goods and they always are as good, if not better, than others at sometimes double the price you ask.

D. Crook, Litchfield, Mich., says—We have tried out the David Bradley Spreader we purchased from you and are much pleased with it. Think the David Bradley Spreader quite an improvement over other spreaders.

A. W. Eager, New York City, N. Y., says—We are very much pleased with the David Bradley Spreader, and cannot say but it does as good work as a $100.00 machine of other make. You can refer to us at any time you wish, if you have any inquiries as to the work it gives.

Wm. Krumrei, Sanger, Mo., says—The David Bradley Plow and Harrow reached me in fine condition. They are far better than all other kinds that are around here.

F. M. Johnson, Bowersville, Ga., says—The David Bradley Cultivator reached me on time and in good shape. I know of none that is near as good. My 16-year old son set it up and experienced no trouble whatever. I think the Little Jap will easily monopolize the trade in this section.

A. T. Brodaux, Gallion, La., says—Your David Bradley Stalk Cutter has given good satisfaction. It is the best I ever used at any price. I paid you $19.90, and would have to pay from $30.00 to $35.00 to local dealers.

W. H. Joseph, Tuscola, Ill., says—I want to thank you for your prompt shipment of the repair for my cultivator. I received it the next day after ordering it by mail.

W. J. Odom, Eldorado, Okla., says—Received my shipment in good order and the David Bradley Cultivator was perfectly satisfactory. I know of no other implements that are equal to the Bradley and they are well adapted to the soil of this country. Other cultivators are selling for $37.50 and I paid you only $25.95 for mine.

R. P. Allison, Loving, N. Mex., says—The David Bradley Planter reached me all O. K. and everything was satisfactory. I don't believe it could be improved on, as everything works to perfection. I have seen several different makes, but they don't suit me half as well as yours.

John Brutcher, Clyde, Ohio, says—Received David Bradley Spreader all O. K. Have set it up and tried it. It works fine and I would not take double the price I paid for it if I couldn't get another like it. I have saved just $35.00 through this deal.

BRADLEY REPAIRS SHIPPED THE DAY WE GET THE ORDER.

It is the duty of our Bradley Repair Department to ship every order the day it is received. No one else can serve you so promptly or furnish repairs at such low prices as we do. Read "How to Order Repairs," on opposite page.

DAVID BRADLEY,
America's Pioneer Plow Maker.

DAVID BRADLEY
GARDEN CITY CLIPPER PLOWS
FOR 80 YEARS THE STANDARD PLOW OF AMERICA

The David Bradley Trade
The Honor Mark of Q

Direct From Factory to User
Prices Lower Than Dealers Paid

The plows offered in this catalog are the original David Bradley Garden City Clipper shapes, designed and perfected by David Bradley, America's pioneer plow maker. Through eighty years of severest tests in the hands of farmers throughout the civilized world, they have proven to be the lightest draft, easiest scouring and most perfect working plows made. The fame of David Bradley implements is not confined to any state or to any country, they till the soil in every section of the globe. They have time and again carried off first honors at the greatest of world's fairs, among them the Centennial Exposition, 1876, The Columbian Exposition, 1893, The Pan-American Exposition, 1901, and others too to mention. No matter what section of the country you live in, no matter what your soil or what kind of plow you need, you will, among our line of David Brad find the exact plow for your requirements; the plow which will serve you best saving of from one-third to one-half, compared with the price you would have any other standard make of plow.

DESCRIPTION OF DAVID BRADLEY GARDEN CITY CLIPPER STUBBLE AND STUBBLE AND SOD PLOWS.

Bottom Construction.

The plows shown on this page are without doubt the most popular walking plows in America, and a careful comparison of them with other makes will convince you that their quality cannot be surpassed. Every David Bradley plow is sold subject to a fair test in your own field and with the understanding that it must please you perfectly, that it must satisfy you better than any other make of plow you can buy at any price, or we expect you to return it to us at our expense and we will return to you the full purchase price, together with the freight charges you paid.

MOLDBOARDS, SHARES AND LANDSIDES are made of the very best hard tempered soft center steel. SHARES are 5-16 inch thick, and have reinforced points, insuring long wear.

MOLDBOARDS are double shinned, that is, an extra thickness of hard steel is welded on top of the front of the moldboard, the point where the wear is greatest. This insures double the wearing qualities obtained by placing the shin underneath, as most makers do.

LANDSIDES are medium high, as shown in illustration, and are of double thickness at the heel, where the wear is greatest. They are bolted to an inner steel landside bar, which is securely welded to the steel frog underneath the moldboard and share.

LANDSIDE VIEW.

TEMPERING: Moldboard, share and landside are all uniformly hard tempered by the David Bradley secret process, insuring the best wearing and easiest scouring qualities. They are carefully ground and highly polished, the grinding of the plow bottom being done in the same direction as the land or furrow slice follows the mold. That is one reason why David Bradley plows scour quicker and better than others. The entire bottom is strongly braced, as shown in illustration.

STEEL BEAMS are made of the very best double beaded high carbon steel. They are heavy enough to insure ample strength and are formed with high arch so as to trashy land. Clevises are malleable iron, broad and adjustable in all directions.

HANDLES are first quality steam bent oak, securely attached and braced to the beam with flat steel braces. The plows are finished in the standard David Bradley colors red, yellow and black. Not only the highest grade, but the best finished and most attractive in appearance of any plows made. Aside from the shapes of the moldboards and bottom construction of the four styles of plows shown on this page is identical.

David Bradley Garden City Clipper. Right Hand. Steel Beam. Stubble Plow.

$8.68

SHIPPED FROM KANSAS CITY, MO.

These plows are intended for use in old stubble ground. They have a bluff or short turn moldboard which pulverizes the soil, turns under stubble, weeds and corn stalks more thoroughly than any other shape. We recommend this shape for all old ground which has been highly cultivated. It will scour in black, sticky or clay soil. We do not recommend this shape for sod plowing.

This plow is made of the very best material. A complete description of the construction is given above. Cast or chilled shares can also be used on this plow, as the heavy steel frog reinforces the share point.

Prices are for the plows complete with soft center steel moldboard, landside and share. Shipped from Kansas City, Mo.

David Bradley Garden City Clipper. Right Hand. Steel Beam. Stubble and Sod Plow.

SHIPPED FROM KANSAS CITY, MO.

This shape of plow is also known as the Turf and Stubble or General Purpose shape. It differs from the stubble plow by having a longer turn moldboard which turns the furrow slice clear over. We recommend this shape for turning under very weedy ground, clover, timothy or blue grass sod and for deep stubble plowing. It is not intended for the average stubble or old ground, unless it not difficult to turn, as the moldboard is long and in wet or sticky stubble ground do as satisfactory work as the regular stubble shape. Cast or chilled shares can also on this plow as the heavy steel frog reinforces the share point. A complete descripti construction of these plows given above.

Prices are for the plows complete with soft center steel moldboard, landside an Shipped from Kansas City, Mo.

David Bradley Garden City Clipper. Left Hand. Steel Beam. Stubble and Sod Plow.

$8.78

While right hand plows are almost universally used, some sections of the country still demand the left hand plow and to accommodate such customers we furnish this shape of plow in left hand.

These plows are the same shape as our right hand stubble and sod plows described above, except that they turn the furrow to the left or just opposite from the right hand plow. They are intended for use in heavy stubble, clover, timothy or blue grass sod and for deep stubble plowing. A complete description of the construction of these plows is given above. Cast or chilled shares can also be used on this plow, as the steel frog reinforces the share point.

Prices are for the plows complete with soft center steel moldboard, landside and share. Shipped from the big David Bradley factory at Bradley, Ill.

32A112	L577	16	120	11.28	2.23	1.83	70c

Crucible steel shares are best for stony and stumpy ground, especially in the Northwest, as they have a mild, natural temper, and while they will not wear so long as the hard tempered soft center steel share, they are not as liable to break should the plow strike an obstruction.

David Bradley Garden City Clipper. Right Hand. Wood Beam. Stubble and Sod Plow.

$9.23

These plows are of the same shape and construction as the steel beam stubble and sod plows described above, except that they have wooden beams. While steel beam plows are generally used, there are still some sections where wood beam plows are preferred, and to meet such demand we make this plow with wood beam. It is intended for use stubble, clover, timothy or blue grass sod and for deep stubble plowing. It has a long moldboard, which turns the furrow slice clear over. Beams are made of first quality are rigidly braced, as shown in illustrations, and are adjustable to cut more or less or chilled shares can also be used on this plow, as the heavy steel frog reinforces the Complete description given above. David Bradley Royal Blue Plows.

Beam. Right Hand Only.

$7.46

PRICE INCLUDES ONE EXTRA STEEL SHARE

This plow is a great favorite in all sections, especially in mixed land country. Does fine work in stubble or tame sod, and, as the moldboard, landside and share are crucible steel, mild or natural temper it gives splendid service in stony land. The bottom construction of this plow is one of its special features, the moldboard, share and landside being securely bolted to a steel frog, and outer landside secured to a cast inner landside which has an extra slip heel. Bottoms are perfectly ground and highly polished. Moldboards are chamfered on top, insuring great wearing qualities. Beam is heavy double beaded forged and highly arched, so as not to foul in trashy land. Handles are of first quality oak, well braced to beam by flat steel braces. Clevis is malleable, broad and adjustable. Price is for plow complete with one extra share. Shipped from the big David Bradley factory at Bradley, Ill.

David Bradley Chilled Plows.

$3.68

Without Wheel and Jointer

PRICE INCLUDES ONE EXTRA SHARE

David Bradley Chilled Plows are favorably known in all sections where chilled plows are used. They are noted for perfect shape and scouring qualities, which contribute to light draft. Extreme hardness of wearing parts is assured by the special process employed in their manufacture. The share and shin (sometimes called cutter shares) are in one piece, so in renewing one you renew the other. Materials used in the bottoms are a special mixture of metals of extreme hardness, yet possessed of strength and toughness. That is why David Bradley chilled plows will stand double the wear of others. Beam is first quality oak, thoroughly seasoned and bolted to slotted braces on the handles, making it adjustable for more or less land. Handles are thoroughly seasoned oak, braced by heavy rounds and a steel stay rod. A jointer should be used with No. D19 and larger plows when plowing trashy ground. Nos. D19, D20 and D40 are made with either wood or steel beam; other sizes wood beam only. NOTICE—Chilled plows are intended for use in sand or gravel soil and only under such conditions are they to be preferred to a steel bottom plow. They should never be used in black or sticky soils. This type of plow is always made with slanting landside, and is measured by all manufacturers from the top of moldboard to outer end of share. The bottom of share measures about 2 inches less than the full cut of plow. Price is for plow with one extra share, wrench and adjustable malleable clevis. Jointer and gauge wheel are extra. Shipped from Bradley, Ill.

David Bradley Prairie Breaking Plows.

Shipped from Kansas City, Mo.

$10.99

COMPLETE WITH COULTER, GAUGE WHEEL AND ONE EXTRA SHARE

ADJUSTABLE BEAM

This plow is well known throughout all prairie states, where thousands of them are giving the best of satisfaction. It is of exceedingly light draft, having a long tapering moldboard and slanting share which lies nearly flat and turns a smooth furrow. Intended for breaking original prairie land at a depth of 2 to 4 inches, but does good work in old sod. Moldboard, share and long bar landside are crucible steel, natural tempered; share is left soft enough to sharpen with a file. Standard and standard cap are steel and the entire bottom well braced throughout. A special feature is the flat bar steel brace running from beam to standard and bolted to the inside handle. This insures great rigidity and makes the David Bradley the most strongly braced prairie breaker made. Beam is extra heavy seasoned oak with convenient adjustment to make plow cut more or less land. Handles are selected seasoned oak, well braced and bolted to bottom and beam. Price is for the plow complete with rolling coulter, gauge wheel and one extra share. Shipped from Kansas City, Mo.

David Bradley Hillside or Swivel Plows.

$3.95

PRICE INCLUDES ONE EXTRA SHARE

These plows are intended for side plowing, and at any time can be used on slopes or level land. The bottom operates on a swivel held in place by a latch at the rear. By releasing the latch the bottom can be instantly reversed from right to left. The swivel is easily and the latch is positive. Moldboard, landside and share are of chilled metal, the same as used in the David Bradley chilled plows, giving extreme hardness of wearing parts and a long lived perfect scouring plow. Bottoms are fully ground and polished and the entire plow is very strong and well braced. These plows turn a furrow from 1 to 3 inches wider than the plow, according to condition of the soil or sod on which they are used. Jointer can be used on 10 or 12-inch plows. Gauge wheel can be used on all sizes. Beam and handles are heavy first class oak. Clevis is malleable and adjustable. Price is for plow complete with one extra share. Shipped from the big David Bradley factory at Bradley, Ill.

David Bradley Northwest Breaker.

$12.45

COMPLETE

For Use With 3 or 4 Horses

An exceptionally strong and well braced plow, designed for a heavier class of work than the standard type of prairie breaker. A splendid plow for heavy prairie sod and brush work, also extensively used for road making and grading purposes. Beam is extra heavy and made of selected oak. Standard is extra heavy steel, solidly braced. Moldboard, share and long bar landside are of crucible steel, with natural temper. The heavy steel coulter is made with a shoe at the point, into which the point of the share is inserted, making it absolutely solid. Rolling coulter cannot be used. Gauge wheel is adjustable up and down and back and forth on the beam. Handles are steam bent selected oak, extra heavy, strongly braced. Price is for the plow complete with wheel and coulter. Shipped from the David Bradley factory at Bradley, Ill.

David Bradley New Ground Plow.

$7.42

COMPLETE WITH JUMPING COULTER

Designed especially for use in new ground where stumps and roots are too plentiful to permit the use of the regular type of breaking plow. It is not intended to serve the purpose of a regular moldboard plow. Jumping coulter either severs the root or carries the plow over it, after which the plow immediately enters the ground. Moldboard and share are in one piece and are mild or crucible steel with natural temper. Carefully ground and highly polished. The moldboard is welded to a narrow steel landside which is bolted to the beam, the lower end of which curves to conform to the shape of the moldboard. Beam is heavy forged steel, highly arched. Shipped from Bradley, Ill.

David Bradley Steel Beam Middle Breakers

$8.53

These plows have the celebrated Garden City Clipper Middle Breaker Bottom, acknowledged to be the most perfectly shaped bottom of its class. Thousands used throughout the cotton country; everyone considers them the best. Used for breaking or bursting cotton ridges, also for opening furrows in which to plant corn, potatoes, etc. **Moldboards are hard tempered, soft center plow steel** and share is crucible steel with mild or natural temper, all carefully ground and highly polished. Beam is highly arched double beaded forged steel, bent to follow the moldboard nearly to the heel, to which a steel frog is attached and moldboard bolted thereto, the most rigid construction possible. A curved steel rudder back of the moldboard steadies the plow and makes it run straight. This is adjustable up and down and regulates depth. Handles are flat steel, with malleable hand pieces and securely braced to the beam. Price is for the plow complete with steel rudder and malleable clevis. Shipped from the big David Bradley factory at Bradley, Ill.

David Bradley Rod Breakers

$6.32

Shipped from Kansas City, Mo.

COMPLETE WITH GAUGE SHOE, FIN CUTTER AND ONE EXTRA SHARE.

The best plow of this class made. For use in shallow plowing of original prairie sod, tough enough to hold together while turning. Works best where there are no stones or roots and should not be used for heavy work for which a regular moldboard breaker is required. Curved spring steel rods take the place of a moldboard and contribute to light draft. Share and landside are crucible steel, with mild or natural temper. Beam is heavy double beaded forged steel, solidly braced. Handles are oak, steam bent. Price is for the plow complete with fin cutter, gauge shoe, malleable clevis and one extra share. David Bradley Walk Vineyard G Plo

$17.95

These are also known as pony gang or orchard gang plows. They do splendid work in all kinds of shallow plowing, but were designed especially for use in vineyards, hop fields and orchards. They can be used close up to trees or vines without roots. In many sections they are also used in plowing fields, corn fields, summer fallow, and for putting grain, etc. Plow has three bottoms, each bottom row 8 inches wide and is intended to plow from 2 to deep. The rear bottom or gang can be detached, two-furrow plow if desired. This does not interfere with the other mechanism of the plow. By setting bottom nearest the vine to cut shallow, while the deeper, the plow can be adjusted to throw the dirt or toward the vines. The plow is furnished with and share of mild or crucible steel with natural temp fully ground and polished, or with crucible steel and cast shares of the same metal used in David chilled plows. Handles are flat bar steel with malle hand pieces. The entire plow is well braced and are positive and easily operated. Wheels are 19 and have half oval tires. Price is for the plow illustrated. Three extra cast shares are furnished 32A188. Shipped from the big David Bradley Bradley, Ill.

DAVID BRADLEY PERFECTION SULKY PLOWS

$22.95

HAND LIFT.

This is the best frameless Sulky Plow you can buy. It cannot be excelled for a light, medium high lift plow, and possesses more good features than can be found on other plows of its kind. All parts subject to strain are made of steel or malleable iron, relieving any possibility of breakage. The beam is of heavy first quality high carbon steel with high arch and ample clearance. Bottoms are the famous Garden City Clipper shapes, the same as used on our other David Bradley sulky plows. Levers are within convenient reach of the operator and have such leverage that they can be easily operated by a boy. Rear wheel is connected to beam by two heavy steel plates, securely bolted and extremely strong. The rear wheel casters and locks in line with the plow after turning corners. Rear wheel lock casting is adjusted by two set screws, enabling operator to set plow to carry the landside away from the land, relieving friction and insuring light draft. The hand lever on top of front furrow axle is for adjusting the front furrow wheel and the plow can be successfully guided for more or less land. The operator can do this from the seat while plow is in motion; a convenience not found on any other frameless plow. Wheels have staggered spokes and are very strong. Land wheel is 30 inches in diameter, rear and front furrow wheels are 20 inches in diameter. Wheel boxings are dustproof with 7¼-inch wearing surface and so constructed that it is only necessary to occasionally fill the cups with hard oil to insure proper lubrication. The rolling coulter permits of any adjustment desired. The blade is of high carbon steel that will hold an edge. It turns on a chilled cone dustproof bearing. Clevis is made of steel and malleable iron, of simple and strong design. By loosening one bolt it can be quickly changed for two, three or four horses. The nine-hole drop clevis permits any adjustment that may be required. The plow is furnished with three-horse evener, coulter, wrench and weed hook, but without a pole, although you can easily attach one if wanted. Jointer will be furnished in place of coulter, if so ordered. Shipped from the big David Bradley factory at Bradley, Ill.

DAVID BRADLEY No. 7 SULKY PLOWS $27.85

BEAM HITCH—FOOT LIFT.

To anyone preferring a beam hitch sulky plow, we recommend this as the best plow of its type that money can buy. It is a great favorite in all sections, and will be found equal in every way and superior in many ways to any of the standard riding plows of other makes. The frame is exceedingly strong, being formed from one solid bar of heavy steel ⅝ inch thick. It has no chance to become loose. It will not sag, and insures proper working position of the plow at all times. Frame is up 23 inches from plow bottom, affording ample clearance for trash. The beam is unusually heavy and is suspended from the frame by two heavy steel bails, which hold the plow rigidly in place. The adjustable foot lift lever responds readily to the slightest tread and plow can be raised or lowered with ease. Lift is 5½ inches from ground. The beam can be locked so that bottom is held firmly in the ground, it can't jump out. Tension on the lifting spring can be relieved and the plow left to float in stony ground. All levers are conveniently located near the seat. The depth regulating lever is at the right and keeps the bottom level at any depth plowed. The cushion spring on the land lever insures a smooth furrow, even on rough ground. A connecting rod governs rear wheel. It is connected with the pole plate and in such a manner that plow can be turned or backed up in the shortest possible circle. Operator can adjust pole plate to shift tongue to any desired position while team is moving. Wheels are steel with wide oval tires. Land wheel is 34 inches in diameter, and rear wheel is 20 inches in diameter. Furrow wheel is 24 inches in diameter. Wheels are all steel with heavy oval tires and staggered spokes, and all hubs have the Bradley patent oiltight dustproof bearings, the best on earth. Price is for the plow complete with pole, three-horse evener, neckyoke, weed hook, wrench and rolling coulter. We will furnish with four-horse hitch instead and an attachment which permits one horse to walk in furrow and three on unplowed ground for $1.15 extra. This hitch is desirable for plows with breaker ...and for use in listed ground. Jointer will be furnished in place of coulter if so ordered. ...from the big David Bradley factory at Bradley, Ill.

It contains every good feature a plow could possibly have and many distinctive B features all covered by United States patents which their use on any other plow. Year by year this plo been perfected until in its present form there seems absolutely no room for improvement.

THE FRAME is wide with plenty of room for coult is made of extra heavy high carbon ⅝-inch thick, securely bolted and rigidly braced. Whe high, giving a clearance to the frame of 23 inches fro bottom of the plow and point of plow lifts 7 inches fr ground. This plow differs from all others inasmuch beam is contained entirely within the frame, the hitch made from a forward point on the frame directly with the point of the plow beam, thus affording any tage which could possibly be found in a beam hitch but at the same time relieving the plow bottom of the of heavy eveners. Just so much less weight for the r lift, one reason why this plow can be easily raised fr ground by the slight foot pressure of a small boy o As an illustration of the ease with which the X-Ray lever operates, a 200-pound man can stand on the wing moldboard when the plow is in the ground and, with slight pressure on the foot lever, the driver can ea plow, man and all with horses at a standstill. We de other plow maker in the world to produce a foot lift which will accomplish this.

WHEN THE PLOW BOTTOM IS LOWERED into the ground the point of the beam rests against a patent stop inside the frame which loc plow in the ground. There is absolutely no side motion to the beam, it being held firmly in by a heavy bail with wide bearings and is unaffected by position of the hitch. The frame and wheels carry the entire load; the plow ite nothing to do but plow, which it does with lighter draft than any other plow made, and turns a smooth, even furrow at all times. Th accomplished easily with team either at a standstill or in motion, and when plow is lifted while in motion it can be returned to the ground but a few inches of travel, making it one of the greatest stone dodgers on earth. The land wheel is 34 inches in diameter; the front furrow 24 inches; and the rear furrow wheel, 20 inches in diameter. Wheels are all steel, with oval tires and heavy round steel staggered spokes welded into the Bradley patent long distance grease retaining dustproof hubs; absolutely the best and most lasting hubs made. The bearing inches long. When they are properly oiled, one oiling is sufficient to plow a 40-acre field. Boxes are removable and easily and cheaply replace plow enters the ground point first, and raises in immediate response to the slightest pressure on the foot lever, this being accomplished heavy coiled lifting spring and compound arrangement of levers, constituting the foot lift.

LEVERS ARE CONVENIENTLY LOCATED so as to operate easily from the seat. The land lever controls the position of the plow bottom and keeps it running level. The front furrow lever regulates the depth. The lifting lever locks the plow in the ground and if desired can be used in connection with the foot lift. A noteworthy feature of this plow is the shortness of hitch. This couples plow and team up close, does away with side draft, and makes the handling of the X-Rays No. 2 an easy matter for man and team even under the most unfavorable conditions. A pole plate adjuster enables the driver to adjust pole from the seat with team in motion.

DAVID BRADLEY'S CELEBRATED PATENT SPRING CLEVIS is furnished with the X-Rays No. 2 when fitted with three-horse evener. This is a very desirable feature. It often prevents breakage of shares, lightens the jar in event of plow striking obstructions, makes work easy on your horses' shoulders and it is also a good indicator of draft.

PLOW BOTTOMS FURNISHED with David Bradley riding plows are all of the celebrated Garden City Clipper shape, the most perfectly formed plow shapes known. They meet the various conditions of soils throughout the entire country, and from the bottoms shown below you can select the exact shape of bottom you require. Prices are for the plows complete with three-horse hitch, spring clevis, pole, neckyoke, rolling coulter, weed hook and wrench. Jointer will be furnished in place of coulter if so ordered. We will furnish instead with four-horse hitch an attachment which permits one horse to walk in the furrow and three on unplowed ground for $1.45 extra. This hitch is desirable for plows with breaker bottoms and for work in listed ground. When four-horse evener is furnished we do not supply the spring clevis. Many purchase a stubble or stubble and sod plow and in addition order a prairie breaker bottom. This gives them practically two complete plows by merely switching bottoms and for a very small outlay. For the convenience of those wishing such a combination we list extra breaker bottoms below. An extra share free with all prairie breaker bottoms.

SEND FOR OUR BOOK OF DAVID BR PLOWS if you want more complete informa contains colored illustrations and pictures of plows at work in the field, tells how they and what users think of them.

DAVID BRADLEY GARDEN CITY CLIPPER BOTTOMS

FURNISHED WITH DAVID BRADLEY SULKY AND GANG PLOWS. SHARES 5-16 INCH THICK.

We show below the shapes of plow bottoms furnished on the David Bradley Sulky and Gang Plows shown on pages 1093, 1094 and 1095. They are the celebrated Garden City Clipper bottoms, designed and perfected by David Bradley, the pioneer plow maker of America. These shapes have been used for years by farmers in all sections of the country and with the greatest success. A farmer once using a David Bradley plow is never satisfied with any other. Underneath each bottom illustrated we show Bradley's catalog number, and ring to the price lines of the David Bradley sulky and gang plows you will readily numbers and determine the plow to order. See page 1090 for details of constructio are made the same as the bottoms described there, excepting that malleable frogs a the construction of David Bradley riding plow bottoms.

Stubble Shape.

The best for stubble plowing and in sticky soils.

Bradley's Nos. 33BX, 45BX or 70BX Soft Center Steel Moldboard, Share and Landside. Right Hand Only. The best bottom for old land, corn stalk and stubble plowing; especially in sticky soil, they scour where all other fail.

Stubble and Sod or General Purpose Shape.

For clover, timothy and tame sod plowing. Can also be used in stubble.

The best for deep plowing.

Bradley's Nos. 20-127BX, 20-147BX or 20-167BX, Right Hand, or Nos. 20-128BX, 20-148BX or 20-168BX, Left Hand. Soft Center Steel Moldboard, Share and Landside.

Style of Landsides on Plow Bottoms Shown to the Left.

No. 1 is the shape of landside used on sulky plow bottoms and on the rear bottom of gang plows. No. 2 is the landside on front bottom of gang plows. The frogs in these bottoms are malleable, giving great strength at this point.

Prairie Breaker Shape

Bradley's Nos. B12X, B14X or B16 cible Steel Moldboard, Share and La Mild or natural temper. Right Ha One extra share furnished with each bottom.

$10.00 to $28.50, Men's All Wool Made to Order Clothing. Get Sample Book No. 8

vid Bradley XX-Rays No. 2 Frame Hitch Gang Plows $50.75

High Lift. Foot Lift. Hand Lift. Fully Covered by United States Patents.

plow is a favorite in many sections and has all of the superior features by the X-Rays No. 2 Sulky Plow, described on the previous page. It only by having two bottoms and a frame which is necessarily wider and This plow is of exceedingly light draft and the ease with which it operated is surprising to all who use it. It requires little exertion on of the operator to raise or lower the bottoms, this being accomplished pressure on the foot lift lever, which is assisted by a powerful lifting The forward motion of the team also contributes toward the lift. Being hitch plow the weight of the bottoms is carried on the frame and which contribute to steady running and light draft. Both plows enter and together, point first. The lift can be made while the plow is in and the bottoms will again take the ground within a few inches of Frame is made of high carbon bar steel, 2¼ inches wide by ⅝ inch Wheels are of the same dimensions and construction as those on the No. 2 Sulky Plow, bringing the frames high up from the ground, ample clearance in trashy patches. Points of plows lift 6 inches from The plow is provided with a hand lift lever to assist the foot lift in motion. This plow is easy on operator and team. No jolting or turns square corners either way, and as the frame supports the plow independent of the eveners, the operator does not have to lift them the plow from the ground. Neither is the team affected in any way by the of the bottoms. We recommend this plow for the most difficult work, knowing do perfect work and give as good satisfaction as any other make of gang plow, of price.

RIGHT HAND OR LEFT HAND.

The construction of the XX-Rays is of the highest quality throughout. It is made of the very best steel and malleable iron. Every part designed for strength and service. Bottoms are the famous Garden City Clipper shapes, the most perfect plow shapes known. You will find them fully described on previous page.

Prices are for the plows complete with four-horse hitch, pole, neckyoke, two rolling coulters, two weed hooks and wrench. Jointers will be furnished in place of coulters, if so ordered. We will furnish a five-horse string-out hitch instead for $1.75 extra.

DAVID BRADLEY IDEAL DISC HARROWS

The perfected result of eighty years' experience in designing and building farm implements. They possess every known improvement in disc harrow construction, many of which are found in no other harrow. When you buy **the David Bradley Ideal you have the very best tool of its class on the market. The frame is made of heavy steel throughout.** It is rigidly braced in all directions. The gangs are operated by independent levers; either can be set at any angle without interfering with the work of the other. Levers are conveniently placed in front of the seat within easy reach of the driver. The steel bars connecting the levers with the disc sections are placed under a heavy steel yoke, which is adjustable up and down on the frame. This holds the discs level, keeping them from buckling up at the middle and makes them cut a uniform depth. **Hitch is low,** relieving horses of neck weight, and the pull is direct from the gang bearings. The harrow is of **perfect balance,** which insures unusually satisfactory work. **Weight** boxes are pressed from a single sheet of heavy steel. Discs are the very best steel, carefully tempered and highly polished. Spools are solid iron. **Bearings run in oil soaked maple boxes,** and are provided with oil tubes extending up through the weight boxes. These tubes are closed at the top by a spring cotter. Bearings are absolutely dustproof. Axles are steel, ⅞ inch square. The **oscillating spring steel scrapers** are operated by slight foot pressure on a foot lever at each side of seat post. They are also provided with a **throw-off lever** at the rear, so that the operator can free the scrapers from the discs at any time. This feature not only saves wear on scrapers and discs, but lightens the draft when the use of the scrapers is not required. **The spring seat post** is fully covered by Bradley patents. It can be used on no other disc harrow. This feature, together with the large roomy seat, makes the David Bradley Ideal the easiest riding disc harrow made. Prices are for the harrow complete as illustrated, including tongue and weight boxes, a two-horse evener with harrows having eight or ten discs; a three-horse evener with set over pole and irons with harrows having twelve discs, and a four-horse evener with harrows having fourteen or sixteen discs. At following prices 16-inch disc harrows are shipped from Kansas City, Mo.; other sizes are shipped from Bradley, Ill.

DAVID BRADLEY TONGUELESS DISC HARROWS

$21.70 AND UP

F. O. B. KANSAS CITY.

COMPLETE WITH EVENERS, SCRAPERS AND WEIGHT BOXES.

Harrows with 16-inch discs shipped from Kansas City, Mo.

These harrows are of the same construction throughout as the Ideal harrows with tongue described above, excepting that they have no forward pole or tongue, but have a David Bradley adjustable oscillating tongue truck, secured to the stub tongue. The advantages of a tongueless disc harrow are so readily appreciated by farmers that it is coming into almost universal use.

We recommend by all means that you purchase this harrow. You will then have the most satisfactory and up to date disc harrow made, a machine which does the most uniform work, relieves your horses of worry and neck weight, and makes it possible for you to work clear out to the edge of plowed ground, close to fences, and to turn corners easily. The tongue truck can be easily detached and used on numerous other implements. A forward pole can be used on the truck if desired. This will add no neck weight, merely serve to better control the team, and if you wish us to furnish a pole with the harrow we will do so for $1.00 extra. If you intend to use a forward pole, you should order extra either our No. 32A348 Pole Plate, or No. 32A349 Offset Pole Attachment, listed below with the David Bradley tongue truck. Prices are for the disc harrows complete with tongue truck. We furnish a two-horse hitch with harrows having eight and ten discs, a three-horse hitch with harrows having twelve discs, and a four-horse hitch with harrows having fourteen or sixteen discs. At following prices harrows with 16-inch discs are shipped from Kansas City, Mo.; other sizes from Bradley, Ill.

DAVID BRADLEY REVERSIBLE DISC HARROW AND CULTIVATOR

Shipped From Kansas City, Mo.

$14.36

One of the handiest implements on the farm and is becoming more popular every year. Designed for gardeners and small farmers, but it is useful on even very large farms. It serves the purpose of a disc harrow or a disc cultivator. The discs can be set at any angle desired and can be reversed to throw the dirt in or out. Can be set close together for harrowing or separated so as to straddle the row. Distance between gangs adjustable up to 18 inches. When discs are close together the six-disc machine cuts about 3, and the eight-disc machine about 4 feet. Discs are 16 inches in diameter, made of the very best steel and finely tempered and polished. Aside from cultivating grain, hilling potatoes, cultivating tobacco, etc., this tool can be used to run between rows of berries, grapes, etc., for which work the ordinary disc harrow is too wide. Discs can be tilted at either end to run on an incline, so as to hill or trench. They have oil soaked maple bearings and scrapers. Neckyoke and two-horse hitch furnished. Shipped from Kansas City, Mo.

No. 32A345 Reversible Disc Harrow, with six 16-inch discs. Wt., 225 lbs. Price..... $14.36

No. 32A346 Reversible Disc Harrow, with eight 16-inch discs. Wt., 240 lbs. Price..... 15.53

DAVID BRADLEY IDEAL CUT OUT DISC HARROWS

FURNISHED WITH TONGUE OR TONGUELESS.

$16

COMPLETE WITH SCRAPERS AND WEIGHT BOXES.

The general construction of these harrows is identical with the David Bradley Ideal Disc Harrows, described above, the only difference being the shape of the discs. This type of harrow is preferred in many sections of the country. They are desirable for use in wet or sticky soil, as the discs do not clog or foul so quickly as the full round disc. They are also extensively used in soft ground to prepare for cultivation without plowing. Discs are made of the very best steel, carefully tempered and highly polished. The spring steel scrapers clean the disc perfectly and at a point just above the ground so that dirt and trash are not carried above and over the bar to fill up the discs before they again enter the ground. The eveners furnished with these harrows are the same as furnished with the corresponding sizes of David Bradley Ideal Disc Harrows described above. We can also furnish tongueless disc harrows fitted with a David Bradley adjustable oscillating tongue truck instead of a pole or tongue for $3.95 in addition to prices quoted below. Shipped from the big David Bradley factory at Bradley, Ill.

David Bradley Adjustable Oscillating Tongue T...

$4...

For use with disc harrows, mowers, grain and corn binders, seeders, land rollers, etc. The same truck furnished with the David Bradley Tongueless Disc Harrow. Can be used to advantage on almost every farm implement. Relieves the team of neck weight, and does away with the constant worry of an unwieldy tongue. Simple construction, nothing to break or get out of order, and it contains many features superior to any other tongue truck made. Wheels are dustproof, and have wide oil retaining hubs. Furnished with steel wheels with 2¼-inch half oval tires, as shown in illustration, or with cast wheels with flanged tires for use with binders or other machines with side draft. Distance between wheels is 21 inches. The high arch steel axle allows the wheels to pass clear under the tongue, permitting short turns either way. The casting which attaches to the stub pole is adjustable up or down on the standard, so as to accommodate all heights of hitches and insure direct draft. The construction of this casting is such as to permit the wheels to oscillate and adjust themselves to uneven ground. Each wheel carries its own load and either can be run over an obstruction several inches high without disturbing the position of the tongue. This insures uniform work and relieves the team of side draft. We furnish at ... quoted a pole plate, which can be used with two or four-horse hitch, ... desired to use a forward pole with the truck, or an offset pole attachment ... pole with three or five-horse hitch. The truck is easily attached to any ... It is only necessary to saw off all but about 4 feet of the tongue and bolt the ... stub with bolts we furnish. Shipped from Kansas City, Mo.

DAVID BRADLEY GUARDED END STEEL LEVER HARROWS.

$4.43 AND UP PER SECTION.

FLEXIBLE TOOTH BARS. RUNNER TEETH AT EACH CORNER.

Popular in timber countries and for use in new or stumpy ground. The sides and front end of the harrow are protected by a heavy steel I beam which forms the frame. The steel tooth bars are fastened to this frame at each end, making a very rigid construction. This outer frame serves to prevent the harrow from catching on trees, stumps, stones, or other obstructions. It prevents breakage of the harrow itself and also damage to harness, which so often occurs with ordinary harrows. The spring lever connection makes the teeth flexible, so that they will pass over obstructions without damage. This also eliminates strain on the harrow frame. The teeth are triangular in shape. They are 7 inches long and connected to the bars with the celebrated Bradley steel tooth clip, the same as used on the Bradley U-bar harrow. This clip enables one to place the teeth as far apart as desired, or to use as many teeth on a bar as wanted. Teeth are swedged to prevent falling out should they become loose. Made in sections, having either 25 or 30 teeth; each section has five tooth bars and a runner tooth at each corner. The 25-tooth sections cut 4 feet 3 inches and the 30-tooth sections 5 feet wide. Illustration shows a 60-tooth two-section harrow. Levers are conveniently located and provide for all needed adjustment of teeth. Wood drawbar and draw irons furnished with all sizes. Shipped from the big David Bradley factory at Bradley, Ill.

DAVID BRADLEY BOSS HARROWS.

$5.19 AND UP

SEASONED HARDWOOD FRAMES, RIVETED AT EACH TOOTH

Positively the strongest and best finished wood frame harrows made. Frames are made of the best quality seasoned hardwood, strongly riveted at each tooth and firmly braced. All wood parts are well painted with a **first quality oil paint**, which serves as a great protection against action of the weather and increases the life of the harrow. Others offer harrows made of cheap grades of lumber, painted with low grade mineral paint, and in many other ways inferior. Do not be misled; insist upon getting a harrow of quality equal to the Bradley; one made of the best quality of timber. Teeth are ½ inch square. Sections are independently connected to drawbar with drop link clevises, allowing flexibility. The 60-tooth harrow cuts 10½ feet, has one center and one side section and a two-horse drawbar; the 78-tooth harrow cuts 13 feet, has one center and two narrow side sections, and a two-horse drawbar; the 102-tooth harrow cuts 16½ feet, has one center and two wide side sections, and a three-horse drawbar; the 150-tooth harrow cuts 26 feet, has one center, two wide and two narrow side sections, and a four-horse drawbar which is fitted with a **sheave pulley and roller chain draft equalizer.** If you purchase a 150-tooth harrow, you can use it as a 78-tooth or as a 102-tooth harrow by separating the sections and using a shorter drawbar. ...D BRADLEY ALL STEEL HARROW CART.

...39

Any farmer who has ever walked behind a drag harrow all day can appreciate this Bradley labor saver. Can be attached to any style of drag harrow, and will save many a hard day's tramp. The Bradley is the only harrow cart made with axle pivoted to the frame. It is strongly built and simple in construction, no wear out to it. The driver is always in line with and facing his team. The seat is mounted on a steel seat spring which is attached to the frame and axle. As the axle is pivoted to the frame, there is no cramping or straining in turning. By tripping a foot lever when turning, the axle pivots, to allow the cart to follow around after the harrow, and when straightened it automatically locks itself. The cart rides steadily and does not drift on side hill work. Furnished with either 24 or 42-inch wheels with 3-inch oval tires. The 42-inch wheels are preferred by many as they bring the rider well up out of the dust. The shafts or connecting bars are heavy angle iron attaching to the harrow evener by means of steel clasps. Distance between wheels of 24-inch cart is 25½ inches and on the 42-inch cart, 43

ALFALFA CULTIVATOR OR RENOVATOR

Designed Especially for Work in Hard, Baked Soil.

$34.50

Shipped From Kansas City, Mo.

This is a splendid tool to use in the alfalfa field after cutting your crop. Without cutting the roots like a disc, its many sharp teeth cultivate them thoroughly without injury. It will stir up the hard soil as nothing else will do. Discs merely cut the hard earth, but the spiked teeth break up every foot of soil thoroughly. This renovator will rid your fields of weeds; it will quickly kill out crab grass and exterminate gophers. It is constructed on the lines of a disc harrow, the only difference being the spiked wheels. They are heavy castings, each having eighteen teeth, ⅝ inch square, cast solid in the wheels and extending 4½ inches out from the wheel. Gangs are independently operated by two levers conveniently located in front, always in easy reach of the driver. One gang may be shifted without any effect on the work of the other. Gangs and levers are connected by steel bars under a heavy adjustable yoke. This construction holds wheels in alignment and insures uniform depth of cut. Low hitch, no neck weight, draft direct on four bearings running in hard maple boiled in oil, and dustproof boxes. Oil cup on each bearing. Solid iron spools separate the wheels. Weight boxes are pressed steel made from single sheets. Nicely striped and finished. Prices include four-horse evener and neckyoke. Shipped from Kansas City, Mo.

Illustration Shows Check Rower Planter. No. 32A466 Price.....$30.40

TILTING SEED BOXES

David Bradley Planters Are the Only Force Drop Planters Made.

A SUP NO 3CA

The plates deposit the corn into the boots, where it is held by valves until the check is made, then the plunger forces the lower valves open and deposits the corn in the furrow without scattering.

An absolutely reliable two-horse flat drop corn planter which we recommend to the farmer who does not ma tice of carefully sorting and grading his seed corn. For use with all kinds and sizes of seed it cannot be excell oughly tried out and perfected through years of severest tests. You cannot buy a better planter at any price strong and rigid construction, yet light enough to be easily handled by any ordinary team. Simplicity of mecha of adjustment and uniformity of drop are its striking features. The frame is made of heavy square iron pip nections are steel or malleable iron, a positive guarantee against breakage. The runners are larger and str found in ordinary planters. They are strongly connected and their depth can be regulated ind **Seed boxes are hinged and tilt forward,** making it an easy matter to change plates. Wheels a strong construction. The planter is regularly furnished with 30-inch wheels with concave tires, a illustration. Will furnish with open wheels instead of closed wheels for $1.00 extra. If other than style of wheel is wanted, be sure to so order. **An automatic axle clutch shifter** stops the planting d the front frame is raised, and when the frame is again lowered the sprocket wheel is automatic in and the planting mechanism again operates.

The planter fitted for drilling only does not have check rower and its attachments. It is furnished with four plates to drill one kernel of corn 12, 14, 17 or 28 inches apart, and one blank plate. **The Check Rower Planter** is complete with 80 rods of wire, automatic reel, which distributes the wire evenly, so that it never catches in unwinding, anchor stakes, and seven plates, to drill one kernel of corn 12, 14, 17 or 28 inches apart, and to drop two, three and four small or medium kernels; and one blank plate, which can be drilled as desired. Special plates can be furnished if you will send samples of your seed. (See description of No. 15 Planter.)

No. 1 Check Rower Planter, with open tire fertilizer attachment. The same style of fertilizer is also furnished for the No. 15 planter listed below

Adjustable for rows 3 feet 4 inches, 3 feet 6 inches, or 3 feet 8 inches apart, but planters shipped from Kansas City, Mo., are always set for rows 3 feet 8 inches apart.

At extra price quoted we furnish a steel fertilizer attachment which attaches to the rear frame between seed boxes and wheels. When used with check rower planter this attachment drops the fertilizer 2 inches to the rear of the hill and when used with the drill planter it drills the fertilizer continuously in the rows. The most approved method.

Prices are for complete planters, including pole, disc marker and arch for marker rope to pass over. Neckyoke and evener not furnished. Shipped from Kansas City, Mo.

No. 32A465	No. 1 Corn Planter, fitted for drilling only. Weight, 363 pounds. Price	$24.50

No. 32A469	Check Rower Wire with buttons 3 feet 8 inches apart. This wire is of standard size and make and can also be used on any of the other standard makes of planters. Weight, per rod, ½ pound. Price, per rod	.03¾

DAVID BRADLEY No. 15 Edge Drop Force Drop CORN PLANT

VARIABLE DROP. PLANTS EITHER TWO OR THREE KERNELS TO THE HILL.

$31.25 COMPLETE WITH CHECK ROWER.

NO STOPPING TO CHANGE PLATES.

PATENTS PENDING.

Be sure to state width at which you want planter set and distance between buttons on check rower wire.

This is the most steadily accurate and reliable planter ever produced by any maker, and to the farmer exercise care in selecting his seed, using nothing but corn of a uniform size and which has been well graded ommend it in preference to the flat drop planter. No edge drop planter will do good work with other than graded seed. Butts and tips or large and small kernels cannot be handled together and unless you intend to ing but carefully sorted and graded seed, we recommend that you buy our David Bradley No. 1 Flat Dr No. 32A466, illustrated and described above.

The greatest advantage of the No. 15 planter over all others is its wonderful accuracy. One kernel of time is arranged edgewise into the plate cells in the rim of the plate and is carried forward to the cut with the assistance of a spring knocker, passes one kernel at a time to the valves in the boots which hold the check is made at each second or third kernel, according to the wishes of the operator; then the plunger lower valves open and the entire accumulation is dropped into the hill without scattering. Mud cannot ch boots. Hopper tilts forward for changing or examining plates and is very large around, so as to take in which give more time for the corn to work down into the cells, assuring a perfect drop.

VARIABLE DROP. **The strength of the soil varies in the different parts of every field, and and dropped accordingly.** The variable drop feature of the No. 15 planter enables th to change the number of kernels to the hill while the planter is in motion by shifting a lever, which ch number of kernels dropped to either two or three kernels to the hill and without changing plates. We also fu each planter a special plate for dropping four kernels to the hill. This method of up to date planting shou your corn yield sufficiently the first year to pay for the planter.

THE FRONT FRAME **is flexible and permits the self adjustment of runners to uneven ground.** corn always at a uniform depth. The adjustable tongue keeps planter run no matter what height the team may be. The three-piece clutch has a positive lock which holds the dra after it has made a revolution until corn is again dropped by the check wire, when clutch is then thrown ou No tools are needed to change from check drop to drill, simply fasten open both valves in each boot and the clutch stop with the small lever on under side of shaft.

THE AUTOMATIC REEL **is operated by friction.** To wind or unwind the check wire the reel is b an easily reached foot lever, so that the friction wheel fits outer rim wheel, which revolves it. An anchor stake is placed through the eye on seat bracket. The check wire is the hook on end of anchor stake and the stake shifted back and forth, which insures even winding of wire.

PLATES. **Regularly furnished with each check rower planter are a pair for small kernels, a pair for medium and a pair for large size kernels.** In order to get good results the plates must fit the corn you are to plant. Should none of these plates fill your particular need, we can furnish, upon receipt of a sample of your corn, plates that will drop it accurately. Can furnish the following special plates for kaffir corn, shoe peg, yellow dent, popcorn and special plates for Maryland, Kentucky and Tennessee corn.

WHEELS **regularly furnished 30 inches high with concave tires, as shown in illustration,** but we will furnish the planter with open tire wheels for 75 cents extra. If other than regular style wheels are wanted be sure to so order. Wheels and runners are adjustable for rows 3 feet 4 inches, 3 feet 6 inches, or 3 feet 8 inches apart. Can furnish check rower wire with buttons 3 feet, 3 feet 4 inches, 3 feet 6 inches, 3 feet 8 inches, 3 feet 10 inches, or 4 feet apart. **When ordering state distance at which you wish the planter set and the distance between buttons on check rower wire.**

FERTILIZER ATTACHMENT **is furnished with this planter only when ordered extra.** It is a profitable attachment to own and we recommend its use to every farmer. This attachment drops the fertilizer 2 inches to the rear of the hill, the most successful way. **Hand drop is furnished only as an extra,** as the foot drop shipped regularly is most generally used. **Price is for the complete planter, including pole, disc marker and marker arch.** Neckyoke and evener are not furnished. Shipped from the big David Bradley factory at Bradley, Ill.

DAVID BRADLEY No. 1 CORN DRILL.

For simple and substantial construction this drill cannot be excelled. It is made entirely of the very best iron and steel and possesses more convenient features than any other drill of its class. It has the popular Bradley force feed drop, which insures positive work. It is furnished with three plates, dropping one kernel of corn 12, 14 or 16 inches apart, and a blank plate which may be drilled to plant cane seed, peas, beans or other seed. Holes in the plate are larger at the bottom than at the top. This prevents the corn lodging when being carried to the opening of the boot. A brush and metal cut-off are provided in the steel hopper; either can be used when wanted, change being made by the lever while machine is in motion; the same lever also throws the drill in and out of gear. Handles are flat steel with malleable hand pieces. Shipped from Kansas City, Mo.

No. 32A450 No. 1 Corn Drill. Weight, 100 pounds. Price...$7.43

DAVID BRADLEY Nos. 2 AND 3 PRESSER WHEEL ONE-HORSE CORN DRI

The most complete and satisfactory corn drill made. A high grade in every respect. Meets all requirements. This machine has the celebrated Bra force feed dropping device, which is controlled by sprockets made to drop corn 10, 15, 20 or 26 inches apart. We furnish four sprockets, two plates, suitable for dropping large or small corn and blank plate which can be drilled to plant peas, beans, cane or other seed. An opening in the boot enables the operator to see the corn at all times as it leaves the hopper. By means of a slip clutch the drill can be backed without throwing out of gear. The wide presser wheel is provided with a steel scraper. It properly covers every hill. No. 2 drill is shown in left hand illustration. The No. 3 drill is the same, excepting that it is provided with a fertilizer attachment. It sows any quantity of fertilizer desired. Machine is strongly made of the very best iron and steel. Handles are wood.

$2.50 DAVID BRADLEY NEW No. 12X RIDING COTTON AND CORN PLANTER.

This is a two-horse single row riding planter which furrows, plants and covers at one operation. It will plant cotton or corn in bedded or surface soil. It has Bradley's celebrated Champion force feed which is positive, cannot clog, and will not crack the seed. Distributes seed evenly in drills directly back of the opening shovels and it is at once covered with moist soil. Drop is at all times in view of the operator. A slide in bottom of seed box regulates the amount of seed dropped. Plants cotton seed just as it comes from the gin. No preparation necessary. For corn planting we furnish two plates, to plant one kernel 17 or 26 inches apart, also one sorghum plate. The Bradley rotary force feed, the same as used in the Bradley No. 1 Corn Drill, is used. Has chain drive. Main sweep standard is adjustable forward and backward to give the middle breaker the desired pitch. DAVID BRADLEY No. 3 CHAMPION COMBINED COTTON AND CORN PLANTER.

$7.46

STEEL FRAME.

The only absolutely satisfactory combination cotton and corn planter made. It has the celebrated Bradley Champion force feed which has made David Bradley cotton planters the most successful of all. A slide in the bottom of cotton box regulates the amount of cotton seed dropped. Machine can be regulated to plant from 1 peck to 2 bushels of cotton seed to the acre. Cannot clog, does not injure or bunch the seed, and plants it as it comes from the gin, without any previous preparation. For planting corn, the same seed box is used and we furnish plates for drilling one kernel of corn 17 or 25 inches apart, and a blank plate which you can drill for small seed or grain to suit. The change from a cotton to a corn planter is quickly made. Shovel shanks have a friction break, and a depth gauge runner is at the rear of each shovel. The machine is made of the very best iron and steel, excepting handles which are oak, well formed and securely attached to the frame. Shipped from the big David Bradley factory at Bradley, Ill.

No. 32A459 No. 3 Combined Cotton and Corn Planter. Weight, 83 pounds. Price **$7.46**

$27.95 DAVID BRADLEY No. 6 TWO-ROW CHAMPION COTTON AND CORN PLANTER.

38-Inch Open Wheels

State distance apart you want runners set.

For many years this machine has been a great favorite among Southern planters. It is a two-row combination cotton and corn planter of the same general construction as the David Bradley No. 1 Corn Planter. Wheels are 38 inches in diameter, with 6-inch open tires. Seed boxes are steel. The corn plate carrier and cotton planting mechanism are contained in the same box. Four plates are furnished to drop one kernel of corn 14, 17, 21 or 28 inches apart. Also one sorghum plate and one blank plate which can be drilled to plant other seeds as wanted. Frame is adjustable to plant rows 3 feet 4 inches, 3 feet 6 inches, or 3 feet 8 inches apart. It is a positive force feed, cannot clog or injure the seed. Plants cotton just as it comes from the gin, and distributes it evenly in the hill. A slide in bottom of box regulates the amount of cotton seed dropped. To change from a corn planter to a cotton planter, the corn plate carrier is thrown out of gear and the cotton planting mechanism connected with a sprocket wheel on the drive shaft. This is a drill planter only, never furnished with checkrow. Price is for the machine complete with pole, but does not include eveners or neckyoke. Shipped from the big David Bradley factory at Bradley, Ill.

DAVID BRADLEY COMBINED LISTER AND DRILL.

Adjustable for Deep or Shallow Planting —Does Not Break Seed; Can't Clog—

Shipped from Kansas City, Mo.

$17.85 COMPLETE

Shipped from Kansas City, Mo.

A combination of three complete and practical tools in one. Can be used without the drill attachment and subsoiler for hilling up potatoes and similar work and is splendid for such purposes. Also used as a combined lister and drill, as shown in illustration, and as such constitutes the most perfect and efficient tool of its kind. By detaching drill parts from lister and attaching extra pair of wood handles and front gauge wheel parts you have a first class one-horse corn drill. Frequently the lister plow alone is used and followed with the corn drill. Ten or more acres per day have been planted in this manner, using three horses and two men. Price is for the complete combined lister, and drill consisting of a steel beam single lister plow with 14-inch Garden City Clipper steel lister bottom. A drill attachment, the main shaft of which is propelled by flat steel drive wheels with notched edges. A subsoiler attachment forms part of the equipment, and a pair of perfect working shovel coverers serve to replace earth after corn is dropped, also wooden handles and front gauge wheel attachment for separable one-horse corn drill. Three plates are furnished to drop one kernel 12, 14 or 19 inches apart; also a blank plate which can be drilled to suit small seeds. Lister plow handles are steel with malleable hand pieces.

No. 32A415 Combination Lister and Drill. Weight, 188 pounds. Price.....**$17.85**
Extra share for above (Bradley's No. 14-6). Price..... **2.57**

DAVID BRADLEY COTTON AND CORN STALK CUTTERS.

$21.00 STEEL DECK.

Shipped from Kansas City Mo.

The highest grade stalk cutter made. Does perfect work under all conditions, and on account of its stanch construction will give long and satisfactory service. In fact, it will outlast two ordinary cutters. The diameter of the cylinder heads is larger than usually found in other cutters and as no center shaft runs through the cylinder, the clearing space is great, and clogging next to impossible, even in heaviest work. The cylinder revolves easily and the blow which cuts the stalks is accelerated by two spiral springs which can be compressed or adjusted to suit the work. A lever operates the crank. When pushed back it forces down the rods around which the springs are coiled. This compresses the springs and gives a heavy or light stroke as required. When lever is thrown forward, frame and cylinder are raised from the ground. A ratchet holds lever in position to give downward pressure to cylinder, or to hold it from the ground when going to and from the field. Drag hooks raise automatically with the cylinder. They can also be raised by hand. Knives of the 6-knife cutter are 13 inches apart and on the 7-knife cutter, 11 inches apart. Wheels are steel, 36 inches high, strongly built, with 2-inch tires. Price includes pole, but not neckyoke or evener. Shipped from Kansas City, Mo.

DAVID BRADLEY WOOD BEAM POTATO HILLER AND DIGGER.

$5.42

A practical hiller and digger and wing shovel plow combined. A splendid combination tool and one that every farmer or gardener should own. The variety of uses to which it can be put makes it one of the most useful and profitable implements you can buy. Has heavy oak beam and standard. Handles are well formed and braced. Equipped with adjustable gauge wheel and rear depth shoe. The adjustable wing shovel blade leaves the soil loose and destroys the weeds, providing perfect cultivation. The digger works perfectly, leaving the potatoes in excellent condition on top of the soil and runs as steadily as a plow. Either blade can be attached or detached easily. One of the very best potato tools on the market. Shipped from the big David Bradley factory at Bradley, Ill.

No. 32H428 Potato Hiller and Digger. Weight, 68 pounds. Price.....$5.42

SCHOFIELD POTATO PLANTERS AND DIGGERS.

$19.85 Very Latest Model.

SEE THE NEW SPRING PRESSURE DEVICE.

The Schofield is the most reliable and satisfactory combination potato planter and digger on the market. These are the very latest models. They contain every modern improvement and are stronger, better and more perfect working than ever. The dropper is fed by hand, is automatic and insures more perfect work than can be done with a self drop planter. Axle is tubular and spindles can be set so the wheels will run any distance apart from 30 to 42 inches. Distance between the wheels determines the distance between rows, as one horse follows the last wheel track. The driver walks and consequently is better able to keep the horses on the wheel track. Will plant 13, 16 or 19 inches apart at any depth from 3 to 6 inches. When used as a digger the driver rides and has perfect control over both team and machine. The digger can be set to run any desired depth and will not run too deep or too shallow. The separator bars are of tempered steel, set edgewise. These machines are well known and are used in every section of the country. They have earned the reputation of being the only successful combined planter and digger made. We recommend that you buy the combined machine, for you get two perfect machines in one for the price usually paid for one, and it stands to reason that if you have use for one of the machines you will have use for the other. The machine is constructed entirely of steel and iron (except pole), is very substantial, cannot easily get out of order and with fair usage will last for years. Shipped from factory in Northern Illinois.

DAVID BRADLEY SHAKER POTATO DIG

$8.65 WITHOUT TRUCK.

The most satisfactory walking potato digger made. It brings potatoes out clean and whole on top of the ground. The rolling weed fender parts the weeds and vines, leaving the way clear for the blade. Blade is solid hardened polished steel and will scour in any soil. It is flat in shape, 17 inches wide and 15 inches long. The rod platform which hinges to the blade is operated by a trip shaker wheel underneath, which travels on the ground and gives an up and down shaking motion which shakes the dirt from the potatoes, cleaning them as they are dug. The rods on the shaker platform are malleable, 20 inches long and will not break. Beam is of heavy steel, high arched and will not clog. Clevis is adjustable. Handles are first quality oak with adjustable braces. We furnish this digger with an adjustable double gauge whe shown in illustration. The truck straddles the row and holds the digger at a uni It is very desirable in hard ground. We recommend that you buy digger con truck. Shipped from the big David Bradley factory at Bradley, Ill.

THE GENUINE DITTO FORCE FEED ENDGATE SEEDER.

$8.95

STATE WHETHER WANTED FOR WIDE OR NARROW TRACK WAGON.

Another example of the extremely high quality of our entire line of farm implements. This seeder is known everywhere as the **highest grade and most perfect working endgate seeder made.** Sows the correct measurement per acre of any kind of seed and sows it evenly, no matter whether team is driven fast or slow or over rough or smooth ground. Feed can be regulated to sow almost any desired quantity per acre from 15 to 40 feet width, depending upon kind of seed. **Can be successfully used in much stronger winds than others,** as the distributer is at the bottom of the endgate, distributing the cast near the ground, where the wind is the least liable to affect it. Can be set so that the seed will be delivered on only one side of the distributer, either right or left, enabling you to sow full or half width. No other seeder possesses this advantage. Furnished either with or without grass seed attachment, **but recommend that seeder with grass seed attachment be ordered.** Hopper is made of heavy galvanized sheet steel, unlike the flimsy, light weight hoppers on other seeders. Workmanship is of the highest class and every machine is tested before shipping. Price includes endgate, chain, sprocket wheel and clips for attaching to wagon wheel. **State whether wanted for wide track or narrow track wagon.** Shipped from factory in Northern Illinois.

X-L-ALL HOE AND DISC GRAIN DRILLS.

$10.40 UP.

DISC DRILL WITH FERTILIZER ATTACHMENT.

PLAIN HOE DRILL.

Used principally for sowing grain between rows of standing corn. They have the well known fluted feed and will sow any small grain, wheat, oats, flax, barley or beets in drills 7 inches apart, but are not suitable for sowing corn, cow peas or other large seed. The feed is driven by a chain from axle on front wheel and amount sown is indicated on a gauge, which can be changed with drill in motion. Drill is thrown out of gear by a hand lever at rear. Frame is seasoned hardwood strongly braced. Lighter than steel, always in line, and operator and one horse handle it easily. **Handles have guards to protect knuckles from rubbing against corn stalks.**

The Hoe Drill has adjustable frame which by a convenient lever can be adjusted from 31 to 40 inches in width, and while in motion. Hoes are 7 inches apart. Boots are hinged to frame and have wood break pins, making this the best drill for stony or sticky soil.

The Disc Drills have five high quality steel discs with hard chilled dustproof bearings, and runners have ample clearance, allowing discs to readily clean themselves. Oil tubes insure perfect lubrication. Outside discs are mounted on self adjusting wings, springs of which hold them out to cut extreme width. When they come in contact with corn rows they swing in and immediately return to natural position. Width of cut is 38 inches.

The Fertilizer Drills are the same as the plain drills, excepting that they have fertilizer attachment. The fertilizer feed can be regulated to sow all kinds of commercial fertilizer from 50 to 300 pounds per acre. It drills grain and fertilizer together through the same tubes and can be thrown in or out of gear independent of the grain feed. Revolving agitator keeps fertilizer from sticking to sides of hopper. Shipped from factory in Central Indiana.

NEW BRADLEY WALKING CULTIVATOR.

$12.86

SHIPPED FROM KANSAS CITY, MO.

Of more simple and less expensive construction than the Highball Cultivator. Designed to meet the demand for a medium weight cultivator to be used with the lighter styles of gangs. It has many splendid features and gives the best of satisfaction.

The arch is continuous and of solid steel, its ends forming the axles. It is fastened and braced to the pole, making a very strong and substantial frame. Tension can be quickly increased or decreased at the top of the lifting springs, while at the bottom the leverage can be with the gang in use. Action of these springs is perfect, no jerking as with an spiral spring, but an easy continuous lift that makes its use easy for even a boy. of cultivation can be conveniently regulated by adjustment of the spring, by raising the front ends of the beams on the coupling sleeve and by setting the shovels. are of steel, 30 inches high. Straight spokes and 1¼-inch flat tires. Price cultivator complete with shovels, fenders, pole, handles, hang up hooks, whiffletrees Illustration shows cultivator with No. 8½ four-shovel gangs. ID BRADLEY COMBINED LAND ROLLER, PULVERIZER, CRUSHER AND PACKER.

$32.50 AND UP

For thorough preparation of seed bed and pulverizing and packing the soil about the roots of growing without an equal. The heavy cast iron discs turn independently steel shaft, which runs in hard wood boxes. Discs are 18 inches in diameter, and have crushing lugs, as shown in illustration. These catch and pulverize instead of pushing them along. Run the smooth face of the lugs forward an ideal smoothing roller. Transfer the pole to other side and run in and the machine acts as a pulverizer and sub-surface packer. Works the and leaves small loose ridges on the surface so rain can soak away, instead a crust to be harrowed, as do smooth rollers. For rolling young corn, wheat, meadow in the spring, preparing seed bed for wheat in the fall, and for use in and alfalfa culture, it is indispensable and will often pay for itself in a single a 50-acre crop, because ground will hold moisture better and cause grain to germinatwo earlier. Frame is heavy bar steel to which are attached end and center through which shaft runs. By removing some of the discs and using a pair of hitched, operator can shorten length of roller and straddle rows as desired. Price includes eveners and neckyoke. Shipped from Bradley, Ill

DAVID BRADLEY HIGHBALL WALKING CULTIVATOR.

BALANCE FRAME.
Shipped from Kansas City, Mo.

$14.03 AND UP

ADJUSTABLE ARCH.

Illustration shows Cultivator No. 32A627. Price.$15.50

The strongest and best walking cultivator made. On account of its large coil lifting springs it works as well with heavy as with light weight gangs and it stands up under the most difficult kind of work. It is strictly a balance frame cultivator. This is accomplished by giving the axle a sufficient rearward bend to set the wheels well to the rear, thus bringing them underneath the central balancing point.

The steel arch is in two sections, the top ends fitting a sleeve casting underneath the pole, permitting adjustment of distance between wheels of from 31 to 46 inches. The arch sections are amply strong and will not become loose or get out of position, and there is no danger of lifting spring raising gang from the ground, the method of attaching avoiding this difficulty. Wheels are of steel, 30 inches high with 2-inch flat tires, staggered spokes and dustproof oiltight hubs. The evener is a wood bar with pendant steel bars. Price is for the cultivator complete with shovels, fenders, pole, handles, hang up hooks, whiffletrees and neckyoke. For illustration of gangs see following page. Shipped from Kansas City, Mo.

Our Catalog No.	Bradley's No. and Style of Gang	No. of Shovels	Weight	Price

DAVID BRADLEY CRICKET LISTED CORN CULTIVATOR.

$10.47

SHIPPED FROM KANSAS CITY, MO

For years this tool has been a great favorite throughout the listed corn country where thousands are in use. The discs are adjustable in or out on the arch to vary the distance from the corn. Inner discs are 10 inches; center discs, 11 inches, and outer discs, 12 inches in diameter; made of finely tempered polished steel. They are securely mounted on the axles and have chilled bearings of extreme hardness which insure splendid wearing qualities. The discs are controlled by a lever by which they can be easily raised to clear trash and at the end of rows. The shields raise automatically with the discs. The arches are high enough to permit the working of corn of good height. This cultivator is strongly built of the best of materials, and light draft. Runners are wood, 3½ feet long and shod with heavy steel plates. This is positively the best tool of its class made. Shipped from Kansas City, Mo.

No. 32A600 Cricket Listed Corn Cultivator. Weight, 197 pounds. Price.... $10.47

DAVID BRADLEY STEEL FRAME WEEDER AND SURFACE CULTIVATOR.

$6.15

Adjustable Handles and Shafts. Cuts 7½ Feet.

Flat Spring Steel Teeth With Round Points.

A wonderful improvement over the old style square or round teeth weeders, and a tool that is growing in popularity every year. The flat oval spring steel teeth possess greater elasticity than any other form; create a finer mulch and do not injure crops. The frame is made of heavy angle steel and is strongly braced. Weeder has thirty-nine teeth, held firmly by individual fastenings. Teeth can be removed as desired to straddle rows. Adapted for use in any soil. Shipped from the big David Bradley factory at Bradley, Ill.

No. 32A595 Steel Frame Weeder. Weight, 85 pounds. Price.....$6.15

STEEL LAND ROLLERS.

$20.75

OIL SOAKED HARDWOOD BOXES.

F. O. B. factory near Kansas City, Mo.

The strongest and best rollers made. Drums are 24 inches in diameter, made of 12-gauge high carbon steel. Frame is made of heavy steel angles and arranged so that a bottom can be placed inside and the roller weighted as desired. Frame ends are heavy castings with lugs into which the steel hangers are securely bolted. Steel hangers are as stiff and rigid as any cast hanger, and are far stronger and also unbreakable. Drums turn independently on heavy steel shaft and shaft turns in the wooden boxes. Boxes are oil soaked hardwood and will outwear any cast or steel box. Draft is light, the hitch being under the tongue. Seat post is strongly braced. We furnish these rollers with pressed steel heads like used on a steam boiler. We recommend the pressed steel heads as they are stronger and less liable to break than cast heads, and besides are lighter, thus saving you freight charges. You can weight the roller as desired by loading into the platform frame. Shipped from factory near Kansas City, Mo.

David Bradley Little Jap Riding Cultivat

PRICES REDUCED

$22.65 AND UP

SHIPPED FROM Kansas City, Mo.

PATENTED.

COMBINED RAISING AND BALANCING LEVER.

BALANCE FRAME.

IN STRAIGHT OR CRO ROWS IT BEATS TH ALL. A WONDE AT HILLSIDE WORK.

ILLUSTRATION CULTIVAT
No. 32A666
PRICE,
$23.6
COMPLETE, INCLUDING FENDE
F. O. B. Kansas City.

MONEY CAN'T BUY ITS EQUAL is the verdict of every farmer who sees the Little Jap work. It accomplishes many things impossible with other cultivators; cultivates crooked rows as easily as straight ones, having the easiest dodge, the quickest dodge and farthest dodge of all. It saves nearly every out of line hill; almost no effort required of the driver and is so simple that any boy or girl old enough to drive can easily handle it. It does the best of work on hillside or in any kind of work and sends operator and team home fresh at night. There is no other cultivator made like it and it is just as superior to other cultivators as it is different. It has created a sensation everywhere. Farmers are enthusiastic over it and other manufacturers are doing their best to copy it, but without success, because the easy working, quick dodging features of the Little Jap are fully covered by United States patents and will be found in the Little Jap alone.

TRY THE LITTLE JAP AT OUR RISK, take it into the field and try it out under all conditions, favorable or unfavorable. Try it out alongside of any other cultivator made and if the Little Jap does not prove to your entire satisfaction that it is the strongest, simplest and best of all cultivators, return it to us at our expense and we will return to you every cent you paid for it, and freight charges.

THE SEAT BAR DODGING LEVER places the Little Jap in a class by itself. The axles are pivoted, working in malleable sockets which are part of the frame. They are connected with and operated by the seat bar, which is also pivoted and swings laterally. To the front end of the seat bar is connected the arch, to which the gangs are attached by means of a coupling. This coupling permits them to raise or lower at their rear end, and they are held squarely in line of draft and kept at right angles with the frame, which position causes the shovels to cut wider and do the best work. **TO OPERATE,** the rider places his foot either on the stirrups or on the gangs; and to follow crooked rows or to dodge an out of line hill he **merely pushes with his foot against either gang.** This slight push, together with his weight, shifts the seat bar to the right or left and causes both gangs and wheels to move at the same time in the opposite direction, this without affecting position of cultivator or changing the course of the team. After the out of line hill is cultivated, another slight push against the opposite gang swings the gangs back into line with the straight row; all done while the team is in motion, no time lost. The ease with which this is accomplished and the immediate response of the machine to the operator's slightest effort are remarkable.

ON HILLSIDE WORK the tendency of the cultivator is naturally downward, but the seat bar lever causes the weight of the operator to toward the lower side and inclines the wheels to run up hill, holds them steadily to their work, prevents drift keeps gangs in proper position with shovels, cutting an even depth. Foot stirrups on gangs are adjustable so that machine can be used either by boy or man. Seat is also adjustable up and down or in and out, to suit all heights of operators.

THE BALANCING LEVER is a great convenience. At the end of a row it raises both gangs; and to return them to the exact depth, you raise this lever again. No calculation necessary, no trying to remember notches, just throw up the bala and shovels go back to the exact same depth. It works either as a combined balancing gang raising lever or as a balancing lever only, leaving t levers to raise and lower the gangs independently. When the gangs are lifted by the balancing lever the frame is balanced, pole does not rise horses' necks, and the arch is automatically locked so gangs cannot swing. **All levers are conveniently reached from the seat and operate easily.**

THE HITCH is the shortest in use on any cultivator and is always in direct line of draft, making the Little Jap not only easy on but also on the team. The draft of the team helps lift the gangs and the draft springs hold them in the ground, but the guided independently of the horses.

THE BEST OF MATERIALS are used in the Little Jap Cultivator. All parts, except tongue and hitches, are steel and malle Every part designed for convenience, strength and service, and guaranteed to do absolutely satisfactory all conditions of soil and in all classes of cultivating. Every detail of the machine has been thoroughly tested out and its construction proven perfect. **Wheels** are made entirely of steel, 42 inches high, with 2½-inch tires and heavy staggered spokes. Hubs have long bearings fitted with caps and are oiltight. Distance between wheels is adjustable from 44 to 52 inches. **Tires regularly furnished** are concave, as shown in Illustra when so ordered we will furnish flat tires with half oval back. Shovels are finely tempered, soft center steel, carefully ground and polished. Jap is finished in the standard David Bradley colors, bright red, yellow and black. Complete directions for putting together and operating access cultivator. These are hardly necessary, because the simplicity of the Little Jap is one of its striking features. It is prepared for shipment in such as to make it an easy matter to put together, and its operation can be learned in half the time it would take to become familiar with the ordi of riding cultivator. Illustration shows cultivator with No. 124 6-shovel gangs. **Prices are for the cultivators complete with pole, neckyoke, whiffletree shovels and fenders.**

"THE LITTLE JAP IS FAR AHEAD OF ALL OTHERS."

R. F. D. No. 6, Box 2, Milford, Ill.

Sears, Roebuck and Co., Chicago, Ill.

Gentlemen:—My Little Jap Cultivator purchased from you is far ahead of any other cultivator I have ever seen. The seat bar guiding motion is the best thing out, and the advantage of being able to raise and lower the gangs with the balancing lever after having set them to exact depth with the raising levers makes it superior to all other makes. That is saying a good deal, but it's true. The good features of the Little Jap make me feel like striking out with it and working in fields along the road, so as to convince people of the superiority of the Little Jap over all other makes of cultivators.

Yours truly,
CHARLES TANSEL.

HIS FIFTEEN-YEAR OLD BOY RUNS IT.

R. F. D. No. 3, Beardstown, Ill.

Sears, Roebuck and Co., Chicago, Ill.

Gentlemen:—The Little Jap Cultivator you shipped me came in good order. I must say that I never saw anything like it. My fifteen-year old boy handles it easily. I want another one just like it next year. I have tried it in sand, on black ground and on hillsides. It works to perfection. Everybody I have showed my Little Jap to says they never saw anything like it. There are a lot of farmers around here who are going to buy one next year.

Yours truly,
W. F. BROWN.

DAVID BRADLEY LITTLE JAP DISC CULTIVATORS

$28.65 Shipped From Kansas City, Mo.

PIVOT AXLES. SEAT BAR DODGING LEVER. BALANCE FRAME.

Buy with this cultivator an extra pair of shovel, surface blade or spring tooth gangs and you have both a disc and shovel cultivator in one.

Aside from the gangs, this cultivator is of exactly the same construction as the Little Jap Shovel Cultivators described on previous page. It is the most easily handled and best working disc cultivator made and the only cultivator upon which it is possible to successfully use either disc or shovel gangs. It has a flexible arch, as shown in illustration, which permits either gang to work high places or to pass over obstructions without affecting the work of the other. Gangs are adjustable sideways to many angles and swivel in either direction so as to throw the dirt in or out. We furnish, at extra prices quoted, blade, rake and rotary levelers to attach to the rear of the gangs. These level the soil after it is disced. We also furnish a barring off attachment for use in young corn and which also converts the cultivator into a perfect working disc harrow. Another desirable attachment is the No. 150 spring tooth gang, which can be used in place of the disc gangs, constituting a perfect spring tooth cultivator. Any of the shovel, spring tooth or surface gangs listed with Little Jap Cultivators on this or the preceding page, can be used on this cultivator by simply removing the disc gangs and bolting the others in place. Order a pair or more of extra gangs with the cultivator and you will have both a shovel and disc cultivator in one. Prices are for the cultivators complete with pole, neckyoke, whiffletrees, gangs, scrapers and fenders. Shipped from Kansas City, Mo.

No. 32A690 Little Jap Cultivator with No. 148 six 14-inch disc gangs. Weight, 535 pounds. Price **$28.65**
No. 32A692 Extra pair of No. 148 six 14-inch Disc Gangs. Weight, 209 pounds. Price **12.35**
No. 32A694 Pair of Flat Blade Levelers. Weight, 25 pounds. Price **1.32**
No. 32A698 Pair of Rake Levelers. Weight, 17 pounds. Price **1.44**
No. 32A695 Pair of Rotary Levelers. Weight, 40 pounds. Price **2.33**
No. 32A696 Barring Off and Disc Harrow Attachment. Weight, 50 lbs. Price. **2.68**
No. 32A697 Pair of No. 150 Spring Tooth Gangs. (Can be used only on Little Jap Disc Cultivator.) Weight, 38 pounds. Price **4.37**

DAVID BRADLEY LITTLE JAP SPRING TOOTH CULTIVATORS

$25.80

Identical with the Little Jap Cultivators described on preceding page, the only difference is the gangs and shovels. This type of gang is used in nearly all sections. It is especially desirable in stumpy fields, as the spring teeth afford great elasticity for the shovels to pass over low stumps or roots without damage. Very effective in killing weeds and gives splendid results in shallow cultivation. The gangs each have five spring teeth or shanks, to each of which is attached a 2x8½-inch double pointed steel shovel. If you order any other style of Little Jap cultivator and a pair of the spring tooth gangs listed below you can make one cultivator do the work of two or more machines by merely changing gangs. Prices are for the cultivators complete with pole, whiffletrees, neckyoke, shovels and fenders. Shipped from Kansas City, Mo.

32A685 Little Jap Cultivator with No. 96 10-shovel spring tooth gangs. Weight, [illegible] pounds. Price **$25.80**
32A686 Extra pair of No. 96 10-shovel spring tooth gangs. Weight, 121 pounds. Price **9.50**
32A687 Extra Shovels, 2x8½-inch, double pointed, set of ten. Price **2.60**
32A688 Center Attachment, consisting of gang with three spring teeth, between the regular gangs and makes cultivator serve the purposes of a riding spring tooth harrow. Weight, 44 pounds. Price **2.85**

WOULDN'T DO WITHOUT IT.

[illegible] Chicago, Ill. R. F. D. No. 2, Owaneco, Ill.
Gentlemen:—I have owned five other cultivators, but I think my Little Jap is the best I recommend it as the best and easiest handling cultivator made. It beats them all for keeping the weeds out of corn. The pivot axles and balance lever make it a model plow. I would not exchange it for any other surface cultivator I ever saw; in fact, I would not do without the Little Jap. Yours truly, JOSEPH MINKS.

DAVID BRADLEY LITTLE JAP SURFACE CULTIVATOR.

$23.75 Shipped from Kansas City, Mo.

Of exactly the same construction as the Little Jap Shovel Cultivators described on previous page, excepting that it is furnished with gopher or surface blade gangs and with the flexible arch described above in connection with the Little Jap Disc Cultivator. Blades are of very best steel, 3 inches wide and 20 inches long. We furnish at extra price quoted a pair of blade levelers to attach to rear of gangs. These level the soil after it is worked. If you select one of the Little Jap Shovel Cultivators from previous page or one of the Little Jap Disc Cultivators described above, and an extra pair of No. 69 gangs, as listed below, you can make one machine serve the purpose of two by merely changing gangs. Prices are for the cultivators complete with pole, whiffletrees, neckyoke, gangs and fenders. Flat blade levelers and rake levelers listed above with Little Jap Disc Cultivators can be used with these cultivators. Shipped from Kansas City, Mo.

No. 32A680 Little Jap Cultivator with four No. 69 flat gopher or surface blade gangs. Weight, 438 pounds. Price **$23.75**
No. 32A682 Extra pair of No. 69 Gangs with four flat blades. Wt., 107 lbs. Price **7.45**
No. 32A684A Set of four 3x20-inch flat gopher or surface blades. Price **2.55**
These blades can be used only on No. 69 Gangs.

COMPLETE WITH HANDLES, HOBBLES, FENDERS, WHIFFLETREES AND NECKYOKE.

DAVID BRADLEY SENTINEL BALANCE FRAME COMBINED RIDING AND WALKING CULTIVATORS.

To those who prefer a combined riding and walking cultivator, we cannot too strongly recommend the David Bradley Sentinel. It is a rigid axle balance frame cultivator which excels all other cultivators of this type in strength, convenience and ease of handling. It will stand up under the severest strain and never fails to satisfy where this style of cultivator is the choice of the user. Wheels are steel with staggered spokes; they are 42 inches high with 2½-inch concave tires and are fitted with dustproof, oiltight bearings. Adjustable to a distance of 40 to 54 inches between the wheels. The open seat and frame allow a clear view of the row all the while. Seat is adjustable in and out and up and down, to suit operators of various heights, and when the operator wishes to walk, seat can be folded forward without obstructing view of row. Always well balanced whether operator is heavy or light weight. Every lever is effective and works freely. Illustration shows the Sentinel fitted with No. 123 4-shovel gangs. Prices are for the cultivators complete, including whiffletrees, pole, neckyoke, handles to attach to gangs, hobble or spreaders, and fenders. Shipped from the big David Bradley factory at Bradley, Ill.

$44.65 David Bradley Tu-Ro Riding Cultivat

Shipped from Kansas City, Mo.

The Only Successful TWO-ROW Cultivator Made. Cultivates Two Rows at the Same Time.

A Great Economizer of Horse Flesh, Time and Labor.

Pivot Axles—Seat Bar Dodger—E ing Lever.

Crooked Rows as Easily as Straight Ones.

With one David Bradley Tu-Ro Riding Cultivator one man or a boy and three horses can do the work of two single row cultivators, two drivers and four horses. This means a saving of one horse and the wages of one man. To the farmer whose crop is big enough for two single row cultivators we recommend the Tu-Ro. It will pay for itself the first season.

The David Bradley Tu-Ro Cultivator is not only the simplest but it is the most practical and durable, and when once any man or boy becomes familiar with working two rows at a time, he will find it easier to operate than any other two-row cultivator made, and easier than many single row cultivators for that matter. We have yet to see the purchaser of a David Bradley Tu-Ro who would exchange it for any other single or double row cultivator made. Send us your order and test the Tu-Ro to your own satisfaction. We guarantee it to be all we claim or you may return it to us at our expense and we will gladly return your money, together with the freight charges you paid.

THE SEAT BAR DODGING FEATURE

and pivotal axle feature of the David Bradley Little Jap and Tu-Ro Cultivators are practically the same, in fact, both cultivators operate on the same principle. The Tu-Ro is simply the Little Jap in an enlarged form. With his feet on the gangs, in the loops or out, as he may prefer, the operator gives a slight push, just enough to start the side motion of the seat bar with the weight of his body, and the seat bar, being pivoted at its center and connected by means of steel straps with the malleable sockets which connect the pivot axles to the frame, also connected at the front end with the two arches, instantly shifts the gangs sideways to pass the out of line hill. This moves the wheels slightly out of their regular co well as changes the position of the cultivators, but does not affect the travel of the team either as to gait or direction. When the out of line hill h cultivated the operator straightens up and the seat bar is instantly swung again into line with the pole, the time consumed being scarcely no The Tu-Ro works as well on hillside cultivation as on level ground, no drifting, as the operator's weight gravitates to the lowest side of the cu and makes the wheels run uphill at the proper angle to keep the machine working right. No other two-row cultivator will do as good work side. The gangs are parallel at whatever position the cultivator works, and shovels always cut a uniform depth.

THE EXPANDING LEVER

regulates the distance between gangs for rows of varying distances. It is located directly in front of the easily reached, and by moving it back and forth the distance between gangs can be increased or decrea desired. This is a splendid feature, and one you will not find on other two-row cultivators.

HITCHES.

Unless otherwise ordered, we furnish the Tu-Ro with three-horse hitch, as shown in illustration. In light soils three horses ha machine with ease, but in difficult soils and particularly on large Western farms, four or five horses are generally used. The hitch you order depends upon the nature of your soil. **The five-horse hitch** is accomplished by adding a long drawbar with singletrees on each end fastens underneath the double tongue and brings another horse on each side of the three-horse hitch shown in illustration. **The four-horse hitch** same as the five-horse hitch, excepting that the center singletree of the three-horse hitch is not used.

OUR NEW BRADLEY FOUR-HORSE BALANCE HITCH

is an improvement which has met with great favor wherever introduced purely a Bradley invention and cannot be obtained elsewhere. It consis 10½-foot evener with two-horse whiffletrees at each end, a steel caster wheel and standard with irons and braces to attach it between the pole 7½-foot neckyoke. With this hitch the horses always pull by straight line of draft and with no neck weight. The forward weight of the culti borne entirely by the caster wheel, which also makes the machine work steadily and gangs are not affected by up and down motion of poles over rough ground. This type of hitch can be furnished only for four horses.

THE TU-RO IS THE STRONGEST

and best built of all cultivators. It is made to stand up under the hardest kind of work and we guarantee every part of it to give the best of service. It is made throughout of the very best steel and malleable iron. We couldn't make it any better if we got double the price. Wheels are of steel, strongly made, 42 inches high, with staggered spokes and have 3-inch concave tires. They have dustproof, oiltight, long distance bearings which will work through a season with but occasional lubrication. Illustration shows the cultivator fitted with No. 123 8-shovel gangs. **Prices are for the cultivators complete with shovels, fenders, double tongue, three-horse hitch and neckyoke.**

READ WHAT TU-RO USERS SAY.

R. F. D. No. 22, Burnetts Creek, Ind.
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—Am glad to know you are handling David Bradley implements. The David Bradley Tu-Ro is not new to me. I bought one four years ago, the first one bought at this place. I want to say it is the best implement I ever bought and easiest operated. Yours truly,
WILLARD MILLION.

R. F. D. No. 1, Terril, Iowa.
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—My David Bradley Tu-Ro Cultivator was a great surprise to me and my neighbors said there was not a better put up cultivator in this country. Everyone is interested in it. Mr. ——— says he is going to send you an order for a Tu-Ro just like mine. Yours truly,
HARRY GREENE.

Bridgeport, Ill.
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—The Bradley Tu-Ro Cultivator I got from you last year is the best cultivator I ever saw, regardless of price or make, and I would not take $100.00 for it and do without it. Yours respectfully.
FELIX C. VANCE.

Tunnelton, Ind.
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—The David Bradley Tu-Ro is a dandy. It is the only two-row I ever saw that will plow checked corn the crooked way. I plowed alongside of two one-row cultivators in the same field and did as much plowing as both of them, and just as easy on me and team. Three horses are all that are needed. Yours truly,
CHAS. E. ALLEN.

R. F. D. No. 4, Box 41, Marion, Iowa.
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—Am well pleased with my Tu-Ro Cultivator. I plowed 8 acres the first half day, the first time over the corn. It does not cover up any more than a single row. I can always see both rows.
Truly yours, LEWIS WEIS.

Tuscola, Ill.
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—I don't use anything but Bradley Tu-Ros, in fact, would not have a one-row cultivator on my farm. A man or fourteen-year old boy can do better work with the Tu-Ro than they can with a one-row, and do as much again. Some say you cannot raise as much corn with a two-row, but our one-row neighbors don't raise any more corn per acre than I do. In 1909 I raised 21,000 bushels off 360 acres and in 1910 I got 18,000 off 260 acres.
Respectfully, A. L. MARIS.

Tus
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—I have five David Tu-Ro Cultivators on my farm say they do better work with less the man than any double row plow ever seen. I purchased two of th from our local retail implement de three of them from you since you the David Bradley implement fa find the ones you have made management not only to be of the grade quality, but you have made ments on them.
Your Bradley four-horse balance only reduces the load to a great horse, but does away with all nec and its work with the Tu-Ro make perfect. Yours respectfully,
OSCAR T.

VID BRADLEY DOUBLE CAM ALL STEEL HAY PRESS

ANGLE
STEEL
FRAME
LARGE
OPPER
TOMATIC
ING
DER

SIXTY CENTS FOR REPAIRS IN EIGHT YEARS.

San Antonio, N. Mex.

Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—Please send me two rollers for plunger head of my David Bradley hay press, for which I enclose 60 cents. My press is size 16x18. I have had it for eight years and have baled more than 1,500 tons and this is the first money I have spent on it. Yours truly,
M. APODOCA.

$135.75 AND UP

Complete With Whipping Attachment and Lifting Jack.

Dealers Asked $200.00 to $250.00 for This Same Press.

Repairs for David Bradley Hay Presses are seldom needed, but you can always get them from us at but a fraction of the price dealers ask.

D BRADLEY HAY PRESSES **forcibly illustrate the big saving made farmers by our purchase of the David factory.** Take, for example, the No. 32H930 press, which we list here at $135.75. ur purchase of the factory dealers paid $167.00 for this same press and sold it to at from $200.00 to $250.00. This is but one example of the money we save the and we effect for him a corresponding saving throughout, not only the line of David ay presses, but the entire line of David Bradley implements. We offer them all the user for less than dealers paid. There is no better line of hay presses made David Bradley presses and thousands of satisfied users throughout the world there are none so good.

RANTEE. **Our confidence in these presses is evidenced by the guarantee under which we sell them.** We offer you a David Bradley press with the ding that you are to take it into your own field and try it out in any way you Try it alongside of any other press of its type made. No matter if the other press for from $100.00 to $150.00 more, and if after such trial you feel that you would the other press, or if the David Bradley press does not satisfy you in every way you that it is the best press for you to buy, send it back to us at our and we will return you the full price you paid us for it and also the money you freight charges. We have sold hundreds of these presses on these liberal terms the past season and we have yet to hear from the first dissatisfied customer.

EXTREME SIMPLICITY **of the David Bradley double cam press places it in a class by itself.** It is strongly made, of steel. Working parts consist of but a plunger, a double cam, and plunger draw, or cogs, nothing to break, and repairs seldom necessary. Takes two feeds to Team travels in continuous circle. One horse can operate it and it is very for two. Automatic plunger draw is operated by the cam and is positive. rebounds quickly and comes up slow, allowing plenty of time to place large feeds. perfectly under all conditions regardless of expansive force in material pressed and matic spring folder makes a smooth bale. Bales hay, straw, hair, shredded fodder, pea vines, alfalfa, oat hay, excelsior, cotton, etc. An oscillating cross head on plunger end prevents breakage when hay is unevenly fed. Powerful tension bolts set perpendicularly on side of bale chamber. They conform to compression on top and bottom and prevent bulging at sides. Follower boards are reinforced by steel strips on one side, as shown in illustration. It is a low down press, easily fed and convenient for tying the bale. An alarm bell automatically rings as a signal for placing the follower board and can be set for any desired length of bale. The press lies perfectly flat when wheels are removed.

THE WHIPPING ATTACHMENT **enables the feeder to whip up the team at any point in the circle and often saves** expense of a driver. **The Lifting Jack is simple and powerful.** With it one man can lift or lower the press. Having a worm gear, you can't let the press fall.

Wheels are steel, 30 inches high, 4-inch tires. Press can be drawn by two horses on ordinary roads. Price is for the press complete with trucks, lifting jack, two bridges, three follower boards, whipping attachment, evener, neckyoke, tongue, feeding fork and wrenches.

CAPACITY of the 14x18-inch press is 8 to 10 tons; 16x18-inch press, 10 to 12 tons; 17x22-inch press, 12 to 14 tons of hay per day, depending on kind of hay and skill of operators. Shipped from the big David Bradley factory at Bradley, Ill.

No. 32H930 Double Cam Hay Press, with 14x18-inch bale chamber. Weight, 2,975 pounds. Price.....**$135.75**

No. 32H943 Tie Making Machine for making bale ties for any press. Weight, 45 pounds. Price.....**$3.70**

No. 32H945 Extra Following Boards or Blocks. (Will fit any Bradley press of corresponding size.) Price, 14x18-inch size, **96c;** 16x18-inch size, **$1.05;** 17x22-inch size, **$1.17.**

DAVID DRADLEY ONE-HORSE FULL CIRCLE HAY PRESS

$62.50 COMPLETE WITH LIFTING JACK.

f the press thousands of farmers have been waiting for. A high quality one-horse, press of good capacity which, at a very low price, perfectly meets the requirements ividual farmer who does not wish to do custom work and has only a limited of baling of his own to do. This press is not intended to take the place of our all steel full circle presses where a large amount of baling is to be done, but for farmer's requirements the one-horse press will serve every purpose and will for itself in the saving of straw, fodder and other odds and ends which would be wasted.

is constructed and operates on the same principles as our two-horse all steel full but framework is of wood, strongly bolted together. Plunger is wood, steel operated by a double cam with roller bearings and makes two strokes to every the horse. Plunger head pivots at end of beam, allowing plunger to work squarely chamber without side strain. Plunger rebounds quickly, but comes up slow enough plenty of time for placing a large feed. Rebound spring assists action of plunger perfect work when baling damp material. An automatic folder makes smooth Tension is regulated by a hand screw crank within easy reach of feeder. Hopper is square. Baling chamber is 6 feet long. Total length of press, 19 feet. Press is on strong steel wheels and axles. Wheels are 26 inches high with 3-inch tires. depends on operator's ability to keep the horse moving and a good size feed for stroke of the plunger. With a little experience a good operator should be able the 14x18-inch press from 5 to 7 tons and with the 16x18-inch press from 6 to per day. Can make bales weighing up to 100 pounds, depending upon kind of and size of horse.

is for press complete with trucks, lifting jack, feed fork, wrench, feed table, hay hook, combination pole and shafts, singletree and two follower blocks. Shipped from the big David Bradley factory at Bradley, Ill.

No. 32H950 One-Horse Hay Press with 14x18-inch bale chamber. Weight, 1,165 pounds. Price.....**$62.50**

No. 32H952 One-Horse Hay Press with 16x18-inch bale chamber. Weight, 1,175 pounds. Price.....**$67.50**

Send for our descriptive circular and learn all about our liberal proposition. **Write for our price list of bale ties.**

VID BRADLEY ALL STEEL SELF DUMP RAKE.

$18.95

**SELF DUMP
HAND DUMP
FOOT DUMP**

A fine example of David Bradley quality. The strongest and easiest working hay rake ever built. Will do perfect work in either heavy, light or tangled hay, alfalfa or clover, and will do as good work in cornstalks as any rake on the market. The head, axle, cleaner head and platform are high carbon steel. The head is strengthened with a truss rod so that head sagging. All castings which are subjected to strain are malleable. Wheels are high with 16 half-inch staggered spokes, wide double flanged hubs with removable boxes and heavy 2-inch channel steel tires. **They are the strongest rake wheels** Ratchets are protected by dump shields, preventing hay from catching and winding. high carbon spring steel tempered in oil, and are fastened to rake head with holders. Teeth cannot work loose. Cleaner is steel and so constructed as to be flexible or rigid as desired. Large comfortable seat has strong but easy seat spring.

are the easiest dumping hay rakes made. The driver simply presses the foot lever the dump rod to drop the dogs into the ratchet and the forward movement of dumps the hay, the wheels doing all the work. The teeth return to the ground easily and without jar. Can also be used as a hand dump rake. The 8-foot rake twenty-one teeth; the 10-foot rake has twenty-six teeth. Rakes have combination wood shafts so that either one or two horses can be used. Shipped from the big David factory at Bradley, Ill.

32H1202 8-Foot Self Dump Rake. Weight, 420 pounds. Price.....**$18.95**

KENWOOD IMPROVED HAY LOADER.

The Most Successful Loader on the Market.

Made by old and experienced manufacturers who in this machine have produced one of the simplest and most efficient loaders made. Loads from the swath all kinds of hay except very heavy marsh hay or very short hay, and does good work on short hay if raked into light windrows. Rakes a swath 8 feet wide. Operated with a crank shaft driven direct from the sprockets, which are attached to the wheels. Attached to the crank shaft are fork or rake arms, at the lower end of which rakes, each with six tines, are attached. Along the under side of the arms there are small carrying forks which carry the hay to the top, from which it is delivered to the wagon. Levers attached to each end of the crank shaft raise and lower the rake arms so that they may be operated at any desired height. Wheels are wood with iron hubs and have steel tires with projections which assure positive motion. Easy to set up and operate, and guaranteed to give satisfaction under all reasonable conditions. Shipped from factory in Southeastern Wisconsin.

OUR GUARANTEE.

We guarantee the David Bradley Spreader to please you in every way. Try it out in your own field, taking your own time and spreading as many loads as you wish. Put it in competition with other spreaders —your neighbor's or any agent's spreader if you can persuade him to make the test. Then if in your own opinion the David Bradley has not proved to be the strongest built, best spreading, nicest handling, easiest draft of all spreaders, regardless of price, you may send it back to us at our expense, and we will return your money and also whatever freight charges you paid. Every David Bradley Spreader is guaranteed to cost nothing for repairs if properly used. Any part which breaks or wears out through defect in material or workmanship, we will replace free of charge.
SEARS, ROEBUCK AND CO.

Four Feeds

Low Down Box, Easy to Load

Chains Automatically Locked; Can't Jump

Endless All Steel Apron and Eccentric Feed

When Not Needed to Spread, Lift Off Box and You Have a Splendid Farm Truck.

THE DAVID BRADLEY SPREADER is made by the most expert designers and manufacturers of farm implements in America. Such an experienced organization of implement specialists can be found in no other factory. Experience brings success and the excellence of the Bradley Spreader is possible only by reason of the eighty years' experience of the Bradley factory. No other factory can lay claim to such a proud record. No other factory possesses so complete a knowledge of the materials and other qualifications necessary to a perfect spreader, and for this reason the high quality of the Bradley Spreader is impossible with less experienced manufacturers.* You take no chances when you buy a David Bradley. There is not a single feature about it which is in any way experimental. From start to finish it is a demonstrated success and so pronounced, not only by the most competent implement builders in America, but by the thousands of farmers who are using them to their great profit and satisfaction.

FOR HIGH QUALITY, dependable construction, simplicity, ease and convenience of handling, and for all around satisfactory working qualities, no manure spreader of any make or price can excel the David Bradley. It is the **one best** spreader for any farmer to buy. It is the machine which pays for itself the quickest and costs the least to keep. With it two horses do the work of three and a boy in the seat does the work for which other spreaders require a man, and does it better. The David Bradley Spreader is truly a 20th century economizer. It saves time, labor, money and horse flesh. It is the spreader which will serve you faithfully day in and day out, rain or shine, winter or summer, over rough ground, or smooth and always do uniform and satisfactory work with any kind of manure. It not only does the work quicker and better, but unlike the heavy, cumbersome, complicated machines, it is easy to load and hitch on a light team and do your spreading every day, preserving and utilizing all the valuable fertilizing properties of the manure before the sun and rain drains the stack.

FEATURES OF EXCELLENCE not found in any other are embodied in the David Bradley Spreader, and so positive are we of its superiority that we place our unlimited guarantee on every machine. This we could not do did we not know that it was absolutely **the best.** Nor could we afford to send it to you to use, test and try under any and all conditions, with the understanding that it must prove to be the strongest, best spreading, nicest handling and easiest draft of all spreaders, regardless of cost, or you may send it back to us at our expense and we will return the money you paid for it and freight charges. Since our purchase of the Big Bradley factory, we have sold thousands of spreaders under this same broad, sweeping guarantee and as evidence of the satisfaction the machines have given, we refer you to the letters printed herewith. We have scores of others which we will be glad to send you if you will write for our Booklet of David Bradley Manure Spreader Testimonials.

HIGH QUALITY MATERIALS AND CONSTRUCTION

The working parts, in fact, every part of the Bradley Spreader which could be to strain or breakage, is made from high grade malleable iron (iron which annealed so it will not break). This construction costs about twice as much as the cast iron used by ordinary spreader manufacturers, and while perhaps cast iron serve the purpose under ordinary conditions, our aim is to make the Bradley an machine, one which will serve the user without delay through breakage, cause expense for repairs and at all times safely carry the unlimited guarantee we place To insure this we use only the best materials obtainable, regardless of their cost. wisdom of our policy is reflected in the expression of satisfaction we daily receive Bradley users.

The box of the David Bradley Spreader is strongly made of first quality smooth yellow pine, carefully selected and seasoned for months before using. The top edge box are protected by heavy strips of iron so they cannot become split or splintered from fork or shovel. The box bottom is made watertight so that the liquid part manure is preserved and carried to the field instead of being allowed to leak the way. This saving of the most valuable quality of the fertilizer will more than the machine itself within a short time on even a farm of moderate size.

SIMPLICITY.

This feature has played an important part in the success of the David Bradley Its mechanism has the fewest parts of any spreader, yet it is by far the most effective. The machine is absolutely free from complication. The most inexperienced master its operation in half the time it would take an expert to become familiar ordinary spreader, and a boy can handle the machine as safely and easily as a man

LIGHT DRAFT.

To the farmer who has had experience with the hard pulling, cumbersome three horse spreaders, the David Bradley is a revelation. The advantage of being able to the machine with a light team in almost any kind of work appeals to all, and the prising farmer has but to witness the operation of a **two-horse Bradley** to be convinced its desirability over all others.

Rear View of David Bradley Spreader.

READ WHAT BRADLEY USERS SAY.

Dido,

Sears, Roebuck and Co., Chicago, Ill.
Dear Sirs:—I have given my David Bradley Manure Spreader a fair test. I had anything please me as much in the shape of machinery. I was in the market years and corresponded with a good many spreader companies. I saw your advertisement in the Breeders' Gazette but doubted it because your price was so low. A friend me advised me to buy the Bradley, as he had had two years' experience with the priced spreader made, but he liked yours very much better. Two 900-pound horses will work it perfectly. I would not give it up for any other spreader made that ever seen, and no amount of money would take it off my farm and make me sign tract not to buy another. My friend's spreader costs $48.00 more than mine. I it work and it does not compare with mine. The David Bradley has less machinery the simplest I have ever seen. No farmer who ever bought and tried one would it if he kept more than four horses and four cows. Yours, respectfully,
JAMES A. ARNOLD

RIPTION OF THE DAVID BRADLEY SPREADER

Perfect Spreading, Easy Handling, Long Wear Guaranteed. No Better Spreader at Any Price.

Simple, Silent, Indestructible Eccentric Feed Spreading Mechanism.

In reading the following description of the David Bradley Spreader note the exceptionally high quality of material used throughout. The simplicity of its construction and operation, the absolute freedom from complication, which practically does away with all danger of breakage, protecting the user against delays and expense for repairs. You can safely trust the operation of a David Bradley Spreader to the most inexperienced farm hand or to any boy old enough to drive.

BODY. The stanchest construction to stand hard use. The bottom is built on two heavy hard pine sills running full length of box, held together by four hard pine girts **mortised into them.** In addition two ...ies run the entire length of sills for reinforcement. The frame is ...that hardly any collision could affect it. The box is 10 feet long ...higher at the front than rear, which helps the feed and greatly ...draft. Sides are carefully graded smooth lumber and reach 17 ...above upper surface of box bottom. They are bolted firmly to box ...posts, which are bolted to the sides. **Extra strength is given** ...a heavy iron brace bolted to middle of each side and the extended ...center girt. It positively prevents bulging. The box is 2 inches ...the beater end than at the front. This taper ...tend to travel back freely without binding. ...ves of sides are iron bound to protect from ...of fork or shovel.

...**most approved type of steel implement seat,** ...and comfortable, is mounted on a spring stand-...n folds down forward when loading. The ...d is reinforced to sustain the driver's weight. ...boards are amply strong for any weight, sup-...by double irons.

...TOM. This is made of matched flooring for ...sons: It makes it very strong, it forms a ...surface not susceptible to wear and splintering, ...ides a **watertight box.** It is a great advantage ...the liquid part of the load and get it on ...d.

...CK. We furnish the complete spreader with either wood wheel or ...**el truck.** The steel wheel truck is very strong and compact, per-...y handling of the team, short turning, and is low enough for easy ... The top of box sides is only 50 inches from the ground. The ...are 3½x4½-inch oak; the gear is hardwood and wrought iron ...except the malleable iron stakes; axles are hickory; reach, ...and bolsters are oak. Entire truck well ironed and braced. **Reach** ...**ngthened out** in case you wish to use truck for some other pur-...requiring long wheel base. Wheels are practically unbreakable; ...inches and rear 40 inches diameter. Tires ⅝ inch thick and 4 ...wide. **Permanent mud lugs** or traction cleats are riveted to rear ...insuring positive traction. The bearings are 11 inches long, hubs ...y heavy cast, and the wide oval spokes are let into and upset in ...front and rear wheels track; don't make unnecessary tracks in ...field. The wood wheel truck is substantially the same as the steel ...truck, excepting that it has 30-inch front and 42-inch rear wood ...and mud lugs are clamped on instead of riveted.

...STEEL APRON. An endless apron of steel; not a piece of wood ...No "follower board," no "force feed," nothing to set or adjust, ...needed to help it out, because it is correct in principle. It is made ...endless malleable chains connected at short intervals by steel angle ...which pull the load toward the beater evenly. When the beater has gone through the last of the load the box bottom is cleared of all manure. Holding apron snugly on bottom are front and rear steel shafts with four sprockets over which chains travel. **Chains are protected** when running under box bottom by steel angles. Apron is easily adjusted by turning bolts in the heavy corner castings at front of box. Consult illustration for this feature. Note the big solid casting bolted to front post and distributing pull of apron; on other spreaders this strain is usually permitted to fall on one sawed out spot in box side. Note also the steel angles, heavy chain and matched, tongued and grooved box bottom boards.

...orner of Box.

Bottom of David Bradley Spreader. Showing endless steel apron, and angle steel protecting tracks underneath. Note the watertight floor and heavy side sills.

ECCENTRIC FEED. This feature has put the David Bradley Spreader in a distinct class. It simply wipes out feed troubles. When set in motion by the hand lever, the beater shaft turns the heavy malleable eccentric which pulls the pawl against the large ratchet wheel, causing it to advance the apron. It gives it a barely perceptible movement or pulls it along several inches, spreading from a thin dressing up to a heavy coat of manure, as operator wishes. The stop pawl prevents apron "edging back" any of the distance gained. That is all there is to the feed mechanism. It is simplicity itself, and yet it distributes far more uniformly than complicated devices. It works the same up or down hill, on rough ground or smooth. It cannot feed unless beater is revolving. No cramming load against an idle beater by forgetting feed lever. Set it once and pay no further attention to it.

Positive Chain Lock.

BEATER. Here is the "business" part of a spreader. We have made it the strongest we know how. Eight oak crossbars are bolted into heavy **malleable** spiders. **Steel** teeth, ⅝ inch round and shear pointed, are set into these oak cross pieces, which are cross riveted to prevent splitting. Teeth do not track, but are so arranged that every bit of manure must be torn to shreds as it passes between them. Beater revolves in high carbon bearings. Directly above is suspended a **spring trip rake,** which assists in thoroughly pulverizing manure. It automatically trips if any unyielding substance is encountered and permits it to pass without injury to beater.

DOUBLE CHAIN DRIVE. Each rear wheel carries a large, heavy iron sprocket with a 1½-inch flange to enable it to be drawn up tight to wheels without springing. Over these run No. 62 malleable drive chains, between beater sprockets and idlers. The chains engage seven teeth of each large sprocket; the construction of ordinary spreaders allows but three teeth to pull. Beater sprockets are not fast to shaft, but are held in mesh with the **equalizer clutches** which are tight on shaft. Consult illustration of this important detail. This prevents any strain when one wheel revolves faster than another, as in turning a corner. It also permits backing spreader in gear, as the clutches simply disengage from the sprockets. These clutches, like the idler arms, are adjustable in and out.

POSITIVE CHAIN LOCK. An exclusive David Bradley feature; its importance cannot be overestimated. It makes chain troubles **impossible.** Study the illustration and you will see why. When the control lever engages drive chains the heavy malleable idler arms are automatically followed down by wrought iron lock arms that bear down **on a dead center,** completely preventing those arms rising up. The shaft holding idler arms is steel and 1⅛ inches square, on which arms are **adjustable** in and out to insure perfect chain and sprocket alignment. The chains cannot lift the arms; no sudden jolt can move them; they are positively **locked** into position. This prevents sprockets skipping a single link of either chain; the chains cannot jump the sprockets. It takes the strain off lever, rod and rack. Contrast it with the drives in which the tightness of the chain depends upon a long springy rod. Control levers, well formed of iron, nicely finished and having grip latches on each, are conveniently located for the driver. The spreading lever, being used to **engage** the drive chains and not to **hold** them in gear, is very easily thrown in and out. The rack has several notches so that just the proper set is possible. The feed lever has four different positions in feed; the first will spread a barely noticeable coat, and from that up to a heavy 2 or 3-inch coat is possible. The idler arm levers are adjustable in different holes. This provides a simple, quick means of adjustment if chain slack needs taking up. No need of shortening chains. Either lever on a David Bradley Spreader may be thrown in or out of gear with team on the go; no delicate parts to break.

GREASE CUPS. In several places we have supplanted oil holes with large grease cups. They require but occasional filling and insure perfect lubrication, whereas an oil hole takes but a limited supply of oil and by filling up with foreign substances is often neglected.

CAPACITY. We plainly state the capacity of each David Bradley Spreader and assure the purchaser that he can load as much or more ordinary manure as stated. As a matter of fact, our 55-bushel box will hold as much as many so called 60-bushel machines of other makes and our 65-bushel box as much as many 70-bushel machines.

FINISH. The standard Bradley colors, red, yellow and black, make the David Bradley Spreader handsome in appearance. The body is red with yellow striping, gear yellow, and iron parts black. **Three coats** are used: Primer, the best wagon red, varnish and stripe.

Equalizer Clutch and Sprocket.

$46.50 DAVID BRADLEY MANURE SPREADER BOX $51.50

...-BUSHEL SIZE. **SHIPPED FROM KANSAS CITY, MO.** 65-BUSHEL SIZE.

...**wish to purchase a spreader box for use on a truck you already have,** you cannot ...er selection than the David Bradley Spreader Box. It is exactly the same as that ...our complete spreaders. The price for the spreader box includes everything ...make a complete David Bradley Spreader except the truck. Drive chains, ...hinge and everything necessary to attach are included.

...**fit any ordinary farm truck you may have, wide or narrow track,** wood or steel ...run no risk as to perfect fit because of its complete **adjustability.** The clamp ...formed so that sprockets may be held out the proper distance from spokes ...or dished wheels. Idler arms are adjustable in or out on shaft, and beater shaft sprockets are similarly adjustable. Thus a **perfect** alignment is always possible; chain, idler, drive sprocket and beater sprocket all in a straight line.

We recommend purchasing complete spreader with truck, as it costs little if any more than others ask for just a box, and then you have the best spreader always ready for use. However, the David Bradley Spreader Box mounted on any truck you have on hand will make you a spreader you could scarcely equal except with a complete David Bradley. The David Bradley Manure Spreader Box is covered by the same liberal binding guarantee as our complete David Bradley Spreader. See description above.

PRICES OF DAVID BRADLEY SPREADERS SHIPPED FROM KANSAS CITY, MO.

Perfect Spreading, Easy Handling, Long Wear Guaranteed. No Better Spreader at Any Price.

Simple, Silent, Indestructible Eccentric Feed Spreading Mechanism.

In reading the following description of the David Bradley Spreader note the exceptionally high quality of material used throughout. The simplicity of its construction and operation, the absolute freedom from complication, which practically does away with all danger of breakage, protecting the user against delays and expense for repairs. You can safely trust the operation of a David Bradley Spreader to the most inexperienced farm hand or to any boy old enough to drive.

BODY. The stanchest construction to stand hard use. The bottom is built on two heavy hard pine sills running full length of box, held together by four hard pine girts **mortised into them.** In addition two ...ks run the entire length of sills for reinforcement. The frame is ...that hardly any collision could affect it. The box is 10 feet long ...gher at the front than rear, which helps the feed and greatly ...draft. Sides are carefully graded smooth lumber and reach 17 ...ove upper surface of box bottom. They are bolted firmly to box ...posts, which are bolted to the sides. **Extra strength** is given ...a heavy iron brace bolted to middle of each side and the extended ...enter girt. It positively prevents bulging. The box is 2 inches ...the beater end than at the front. This taper ...lead to travel back freely without binding. ...**of sides are iron bound** to protect from ...of fork or shovel.

...**most approved type of steel implement seat,** ...d comfortable, is mounted on a spring stand... ...h folds down forward when loading. The ...d is reinforced to sustain the driver's weight. ...boards are amply strong for any weight, sup... ...by double irons.

...TOM. **This is made of matched flooring** for ...ons: It makes it very strong, it forms a ...rface not susceptible to wear and splintering, ...kes a **watertight box.** It is a great advantage ...the liquid part of the load and get it on ...

...K. **We furnish the complete spreader with either wood wheel or** ...l **truck.** The steel wheel truck is very strong and compact, per... ...handling of the team, short turning, and is low enough for easy ...The top of box sides is only 50 inches from the ground. The ...are 3½x4½-inch oak; the gear is hardwood and wrought iron ...except the malleable iron stakes; axles are hickory; reach, ...d bolsters are oak. Entire truck well ironed and braced. **Reach** ...**ngthened out** in case you wish to use truck for some other pur... ...uiring long wheel base. Wheels are practically unbreakable; ...inches and rear 40 inches diameter. Tires ⅝ inch thick and 4 ...ide. **Permanent mud lugs** or traction cleats are riveted to rear ...insuring positive traction. The bearings are 11 inches long, hubs ...y heavy cast, and the wide oval spokes are let into and upset in ...front and rear wheels track; don't make unnecessary tracks in ...ld. The wood wheel truck is substantially the same as the steel ...truck, **excepting that it has 30-inch front and 42-inch rear wood** ...**and mud lugs are clamped on instead of riveted.**

...**STEEL APRON. An endless apron of steel; not a piece of wood** ...No "follower board," no "force feed," nothing to set or adjust, ...needed to help it out, because it is correct in principle. It is made ...endless malleable chains connected at short intervals by steel angle ...pieces which pull the load toward the beater evenly. When the beater has gone through the last of the load the box bottom is cleared of all manure. Holding apron snugly on bottom are front and rear steel shafts with four sprockets over which chains travel. **Chains are protected** when running under box bottom by steel angles. Apron is easily adjusted by turning bolts in the heavy corner castings at front of box. Consult illustration for this feature. Note the big solid casting bolted to front post and distributing pull of apron; on other spreaders this strain is usually permitted to fall on one sawed out spot in box side. Note also the steel angles, heavy chain and matched, tongued and grooved box bottom boards.

...rner of Box.

Bottom of David Bradley Spreader. Showing endless steel apron, and angle steel protecting tracks underneath. Note the watertight floor and heavy side sills.

ECCENTRIC FEED. This feature has put the David Bradley Spreader in a distinct class. It simply wipes out feed troubles. When set in motion by the hand lever, the beater shaft turns the heavy malleable eccentric which pulls the pawl against the large ratchet wheel, causing it to advance the apron. It gives it a barely perceptible movement or pulls it along several inches, spreading from a thin dressing up to a heavy coat of manure, as operator wishes. The stop pawl prevents apron "edging back" any of the distance gained. That is all there is to the feed mechanism. It is simplicity itself, and yet it distributes far more uniformly than complicated devices. It works the same up or down hill, on rough ground or smooth. It cannot feed unless beater is revolving. No cramming load against an idle beater by forgetting feed lever. Set it once and pay no further attention to it.

Positive Chain Lock.

BEATER. Here is the "business" part of a spreader. We have made it the strongest we know how. Eight oak crossbars are bolted into heavy **malleable** spiders. **Steel** teeth, ⅝ inch round and shear pointed, are set into these oak cross pieces, which are cross riveted to prevent splitting. Teeth do not track, but are so arranged that every bit of manure must be torn to shreds as it passes between them. Beater revolves in high carbon bearings. Directly above is suspended a **spring trip rake,** which assists in thoroughly pulverizing manure. It automatically trips if any unyielding substance is encountered and permits it to pass without injury to beater.

DOUBLE CHAIN DRIVE. Each rear wheel carries a large, heavy iron sprocket with a 1½-inch flange to enable it to be drawn up tight to wheels without springing. Over these run No. 62 malleable drive chains, between beater sprockets and idlers. The chains engage seven teeth of each large sprocket; the construction of ordinary spreaders allows but three teeth to pull. Beater sprockets are not fast to shaft, but are held in mesh with the **equalizer clutches** which are tight on shaft. Consult illustration of this important detail. This prevents any strain when one wheel revolves faster than another, as in turning a corner. It also permits backing spreader in gear, as the clutches simply disengage from the sprockets. These clutches, like the idler arms, are adjustable in and out.

POSITIVE CHAIN LOCK. An exclusive David Bradley feature; its importance cannot be overestimated. It makes chain troubles **impossible.** Study the illustration and you will see why. When the control lever engages drive chains the heavy malleable idler arms are automatically followed down by wrought iron lock arms that bear down **on a dead center,** completely preventing those arms rising up. The shaft holding idler arms is steel and 1⅛ inches square, on which arms are **adjustable** in and out to insure perfect chain and sprocket alignment. The chains cannot lift the arms; no sudden jolt can move them; they are positively **locked** into position. This prevents sprockets skipping a single link of either chain; the chains cannot jump the sprockets. It takes the strain off lever, rod and rack. Contrast it with the drives in which the tightness of the chain depends upon a long springy rod. Control levers, well formed of iron, nicely finished and having grip latches on each, are conveniently located for the driver. The spreading lever, being used to **engage** the drive chains and not to **hold** them in gear, is very easily thrown in and out. The rack has several notches so that just the proper set is possible. The feed lever has four different positions in feed; the first will spread a barely noticeable coat, and from that up to a heavy 2 or 3-inch coat is possible. The idler arm levers are adjustable in different holes. This provides a simple, quick means of adjustment if chain slack needs taking up. No need of shortening chains. Either lever on a David Bradley Spreader may be thrown in or out of gear with team on the go; no delicate parts to break.

GREASE CUPS. In several places we have supplanted oil holes with large grease cups. They require but occasional filling and insure perfect lubrication, whereas an oil hole takes but a limited supply of oil and by filling up with foreign substances is often neglected.

CAPACITY. We plainly state the capacity of each David Bradley Spreader and assure the purchaser that he can load as much or more ordinary manure as stated. As a matter of fact, our 55-bushel box will hold as much as many so called 60-bushel machines of other makes and our 65-bushel box as much as many 70-bushel machines.

FINISH. The standard Bradley colors, red, yellow and black, make the David Bradley Spreader handsome in appearance. The body is red with yellow striping, gear yellow, and iron parts black. **Three coats** are used: Primer, the best wagon red, varnish and stripe.

Equalizer Clutch and Sprocket.

$46.50 DAVID BRADLEY MANURE SPREADER BOX $51.50

...-BUSHEL SIZE. **SHIPPED FROM KANSAS CITY, MO.** 65-BUSHEL SIZE.

...**wish to purchase a spreader box for use on a truck you already have,** you cannot ...selection than the David Bradley Spreader Box. It is exactly the same as that ...our complete spreaders. The price for the spreader box includes everything ...make a complete David Bradley Spreader except the truck. **Drive chains,** ...ps and everything necessary to attach are included.

...**fit any ordinary farm truck you may have, wide or narrow track,** wood or steel ...run no risk as to perfect fit because of its complete **adjustability.** The clamp ...formed so that sprockets may be held out the proper distance from spokes ...er dished wheels. Idler arms are adjustable in or out on shaft, and beater shaft sprockets are similarly adjustable. Thus a **perfect** alignment is always possible; chain, idler, drive sprocket and beater sprocket all in a straight line.

We recommend purchasing complete spreader with truck, as it costs little if any more than others ask for just a box, and then you have the best spreader always ready for use. However, the David Bradley Spreader Box mounted on any truck you have on hand will make you a spreader you could scarcely equal except with a complete David Bradley. The David Bradley Manure Spreader Box is covered by the same liberal binding guarantee as our complete David Bradley Spreader. See description above.

$19.65 FOR COMPLETE 100 FT. OUTFIT Peerless Automatic Carriers FOR LITTER MANURE AN

Plain Carrier.

Install a Peerless Carrier in your barn and save time, hard work and money. It will quickly pay for itself. With it you can easily ke and yard clean and sanitary without the drudgery of the wheelbarrow method. It carries the manure far away, dumps it and automatical reloading. Or it will dump directly into spreader or wagon, in which the manure can be hauled direct to the fields, which experts say M crops. Can also be used for carrying feed from silo.

The Peerless Carriers are the best made, easiest running, and most convenient on the market, and our price is much less than other riers are sold for, and little if any more than others ask for light weight, cheaply constructed, small capacity carriers, which cannot in any with the Peerless. Compare the construction of our carriers with any others and you will quickly see the difference.

Order a Peerless Carrier and compare it in actual operation with any others and if you are not satisfied that it is the strongest, easiest convenient 16-handle carrier on the market, and that it is worth more than any other you can buy at any price, return it at our expense and your money together with the freight charges you paid.

DESCRIPTION: The measure box or bucket is 42 inches long, 24 inches wide and 17 inches deep. One piece of heavy 18-gauge galvanize forms the bottom and sides. Each end is made of two 1-inch hardwood boards cross nailed to prevent warping, and making an absolute box. The sides are protected by a strip of 1-inch angle steel. The bail is made of heavy 2-inch channel steel. Sheave wheels are iron, 2 have roller bearings, and are mounted on malleable swivel reversible brackets and will take short curves and run in either direction. Hangers have spring equalizers so that wheels are always held in line with track, regardless of movement of bucket. Each wheel has a spring track guard which makes it impossible for it to jump the track, and switches are taken automatically. The dumping device is positive and perfectly automatic in action. Set the trip on the track where you want the load dumped, give the loaded car a shove and its weight carries it out on the track, the trip dumps at the desired point and the car automatically returns to the barn. The track is No. 0000 polished steel rod, 13-32 inch in diameter.

The Peerless Carrier with automatic lift permits the raising or lowering of bucket for greater convenience in loading. Lift is very powerful and the heaviest load can be handled easily. An automatic brake and lock stops and locks bucket at any desired point.

Our $19.65 price is for a complete 100-foot straightaway rod track outfit consisting of one plain carrier complete, one trip, 100 feet of steel rod track with loops and clamps, two tension bolts, one stay loop and clamps for 20-foot anchor post, one turnbuckle, and one 6-foot anchor rod. If the automatic lift carrier is wanted, order outfit No. 32H1276. Price, $26.60. If you wish a longer track than 100 feet, order as many extra feet as wanted and allow 2¾ cents for each extra foot. There are so called complete outfits listed by others at possibly a trifle less than our price, but remember when comparing prices that our $19.65 price includes end loop clamps, stay loop clamp, turnbuckle and anchor rod. These are usually furnished by others only as extras. We consider them necessary for the best results.

Send for our special Litter Carrier Circular which shows our complete line of carriers for both steel rod track and solid angle steel track, also special feed carriers, with a complete line of curves, switches and attachments to meet all requirements. It also shows plans of different styles of barns with complete carrier outfits for them.

You can easily make up your order from this catalog for an outfit to suit any ordinary barn, but if you are in doubt what to order, send us a rough floor plan of your barn, with measurements showing location of stalls and alleys and where you want tracks to run and we will send our special circular and quote price on a complete outfit to suit.

The 45-degree curve should be ordered to run the track off to one side at an angle from the barn door. The curve or switch must be ordered if a square turn is to be made. The tracks on the two sides of a square turn must be suspended independently and you will need two No. 32H1281, and two No. 32H1283 for each line of track aside from the main track and one No. 32H1285 and one No. 32H1286 for each corner the carrier will turn. If your barn is over 50 feet long, we recommend that you order at least one spring track suspender. This prevents sagging and relieves strain on the tension bolts. Complete directions for erecting accompany each outfit. Shipped from factory in Southeastern Wisconsin.

Steel or Wood—PEERLESS ADJUSTABLE SWINGING CATTLE STANCHIONS—Pivot or Chain

We have sold more than one hundred thousand stanchions of the wood side bar and pivot hanger style alone, and they have never failed to give satisfaction. The same valuable features which have made them preferred by dairymen and stock raisers everywhere are found in the four new styles shown herewith, giving us the most complete and best perfected line of cattle stanchions on the market.

Peerless stanchions are the only truly adjustable stanchions ever produced. Easily and quickly adjusted to different widths of neck space, either 5, 5½, 6, 6½, 7, 7½ or 8 inches apart, making them suitable for any animal from a small calf to a large bull. The pivot and chain blocks can be quickly shifted so that stanchion is always supported exactly in the center of neck space. Stanchions are so braced at top and bottom, that even if bolts should get loose, or wood should dry out a trifle after long use, all parts will still be held rigidly, there can be no play or leverage, and animal cannot possibly spring any parts or pry open stanchion.

Large illustration shows two wood bar pivot stanchions set in stable frame work. One is closed and locked. When in this position, it swings freely on the pivot. When open it is held securely, animal cannot turn it and has no trouble putting its head through. Smaller illustration shows how the stanchion is adjustable to different widths and how the pivot or chain can be shifted to the center for any adjustment. The chain

No. 32H2205 Wood Bar Stanchion, Pivot Hanger. Weight, 18 pounds. Price, each..... $0.98

No. 32H2206 Wood Bar Stanchion, Chain Hanger. Weight, 18 pounds. Price, each..... 1.08

hanging stanchion is exactly the same except chain in place of pivot. Tops and bottoms of all stanchions are heavy malleables, also braces and pivots. Long loops are heavy steel strap All parts solidly bolted together. Chains are heavy steel, 6 inches long. Side bars of wood stanchions are heavy clear white straight grained hardwood smoothly finished. All metal parts are finished black japan baked on, affording perfect cleanliness and protection against rust.

Our steel stanchions are positively the strongest steel stanchions made. Side bars are heavy channel steel lined with smooth rounded hardwood strips screwed to the steel. These strips prevent contact with the cold steel and chafing of cow's neck. If you want the strongest, and most sanitary stanchion you can get, the Peerless steel stanchions will suit you.

Cows tied with Peerless stanchions are always comfortable. They can take easy, natural positions whether standing or lying down, and no matter what position taken, stanchion is securely locked and animal cannot open it.

Chain stanchions are preferred by many, because while not rigid, they always hold animal in place, also help keep animal clean by drawing forward when lying down and pushing back when standing. All styles stanchions are 49 inches high inside, giving animal greater freedom than stanchions with shorter neck space. Height from top to bottom outside, 54 inches. Usually sold in lots of six or more and shipped from factory in Southern Wisconsin, but we carry in stock at Chicago to ship in smaller quantities when ordered with other goods.

COPPER CABLE LIGHTNING RODS

Our System of Copper Cable Lightning Rods is recommended and endorsed by the leading scientific and government authorities, and in every respect our lightning rods and fixtures are fully up to the highest standards and most rigid requirements which have been set by insurance companies and experts on the subject. We furnish the most complete, most substantial and most attractive line of rods and fixtures on the market at prices which are less than the average lightning rod agent or dealer pays for his goods. You can provide this valuable protection for your property and the lives of your family, put up the rods yourself and get a better job and better goods than you could get from any agent or dealer, and save at least one-half. An expert is not needed for measuring up your building, nor for putting on the rods. We tell you below how to measure and how to order, and with every order we send plain and simple instructions for putting up.

You can easily make up your order from this page for a lightning rod outfit for any ordinary building, but if your building is of unusual construction, or you want more information before ordering, send for our free Special Catalog of Lightning Rods. This special catalog gives plans and instructions for rodding all kinds of buildings; it also shows large illustrations of our complete line of ornamental fixtures which include many designs not mentioned on this page, besides giving much valuable information on the subject of lightning rods in general.

The illustration above shows the actual size of our Copper Cable Lightning Rod, which is woven from thirty copper wires of the purest grade copper obtainable, not less than 99 per cent purity. It is a strong, solid cable, which will lay straight on buildings, and yet is flexible, so that it can be run around angles or corners without kinking or unraveling. Each wire lays to the surface and presents its entire surface as an electrical conductor, thus giving it the largest possible electrical carrying capacity. Price of cable includes sufficient copper clips and nails for fastening to building.

Complete Ornamental Top.

A complete lightning rod system consists only of the necessary amount of copper cable, with clips and nails for attaching to building, and complete plain or ornamental tops or points; the number of these points depending on the dimensions of your building and the style of construction.

The illustrations at the left show a complete plain top, and a complete top with ornamental vane with animal figure. Every complete lightning rod outfit should include one or more of these tops, either plain or ornamental, or both. The animal figures and vanes and glass balls are merely ornamental and do not affect the purpose of the system in any way. A complete top consists of a heavy pure copper tube upright, a seamless pure copper point, a galvanized brace stand for supporting the upright, a copper tee for connecting the upright to the cable and a 4½-inch glass ball. The ornamental top is the same, with the addition of the vane and animal figure. Animal figures are of zinc, full swell bodied, heavily gilded and will not rust. Complete tops stand 5 feet high from base to point.

Complete Plain Top.

While the illustration of ornamental top or point shows vane with a we will, if so ordered, furnish instead, vane with either of the following animals: Cow, pig, sheep or rooster. Vanes with animal figures are 30 inches long. Gl can be furnished in following colors: Opal, blue, ruby, silver or gold. Be sure color wanted and state figure desired.

We also furnish ornamental tops or points with glass tail arrow vane in place of the animal figure. This is a very popular ornament, suitable for residences or barns. Both animal and arrow vanes are mounted on frictionless which permits them to turn easily with the winds.

How to measure your buildings for rods. The best way is to over the building in just the same lines the rod is to be run, and where there a turn or branch, drive a nail or spike to hold the cord in place. In for cable allow enough so that all bends or turns over eaves or are will be gradual, and where cable passes close to metal cornices, ornaments, gutters, etc., it should be connected to such objects. At ground connections are needed for every building, and on large more than five tops or points, three groundings. Allow 10 feet for each connection. That is, the cable must extend into the ground 10 feet be connected with moist earth permanently. Tops or points should over 15 feet apart. Each cupola and tower should have a point or each gable or wing extending from main structure 10 feet or more also have a point or top. There should also be a top or point sides of each chimney.

The plan of barn shows how the rod is run and how the points are placed. The rod is grounded at opposite ends and Where gables or wings make branch circuits necessary, we include charge brass splicers for making these connections. All cable ordered in one piece and cut on the ground to fit its position building. If the roof is of irregular construction and broken up by small gables or hips, it is sufficient to place a point or top on each of the most prominent or elevated parts of the structure.

A complete lightning rod outfit with cable and complete tops will weigh, packed for shipment, from ¾ to 1 pound to the foot. Always shipped from the factory in Southern Wisconsin. When ordering be sure to state color of glass ball desired and the animal figure desired with ornamental tops.

$48.50

WITHOUT ELEVATOR AND COB STACKER.

A sheller of unusual high quality, strength and large capacity and should not be confused with any of the numerous light and cheaply built shellers of this type.

Frame is extra heavy, well proportioned and not being top heavy, sheller cannot rack to pieces no matter how severe the service. Shafting, chains and all mechanism are much stronger and heavier than ordinarily used in shellers of this type. Because of the perfection of its construction and the perfect adjustment of all parts, this sheller attains its large capacity with but little more power than is required to operate the smaller table feed two-hole shellers, which have about one-half the capacity. The X-L-ALL self feed sheller will perfectly fulfill all the requirements of the large farmer or stockman, warehouseman or for general custom work. It is easily and quickly adjusted for different kinds of corn, is guaranteed to shell clean without breaking up the cobs or grinding the corn, and it delivers the shelled corn free from cobs and dirt, and clean enough for market. It has an extra large and powerful fan.

Illustration shows sheller complete with cob stacker and wagon box elevator, but price is for the sheller with self feeder only. If cob stacker and elevator are wanted, these are listed separately and must be ordered at the extra prices shown.

If you need a sheller of this type and want the best you can get, the one that will give the largest capacity with the least power, shell the cleanest and last the longest, order the X-L-ALL. We guarantee it will come up to these expectations.

Sheller requires 2 to 4-horse power and has a capacity of 50 to 75 bushels per hour with 2-horse power, and from 75 to 100 bushels per hour with 4-horse power. Pulley is 12x4 inches and should run 700 revolutions per minute. Shipped from factory near Chicago.

No. 32H1430	Self Feed Two-Hole Sheller.	Weight, 705 lbs.	Price....$48.50
No. 32H1431	Wagon Box Elevator.	Weight, 165 lbs.	Price.... 14.25

KENWOOD ENSILAGE CUTTERS.

Made for us by one of the best known and most successful manufacturers of ensilage cutters in the world. They are machines of large capacity, strongly built, in every way capable of doing first class and satisfactory work and are suitable for small and medium size silos. Furnished either with regular drop leaf feed table or with traveling force feed table at the prices shown below. Have four tempered tool steel knives set spirally to make a downward shearing cut against a steel cutting bar. **Cut is clean and perfect** across the entire width. No. 13 knives are 13 inches long. No. 16 knives are 16 inches long. Cut is adjustable to ¼ inch, ½ inch or ¾ inch long, and if you remove two opposite knives cuts will be ½ inch, 1 inch or 1½ inches long.

$29.25

Without Carrier

THE EASIEST AND SAFEST TO OPERATE.

Main shafts are cold rolled steel 1½ inches diameter in the No. 13 and 1¾ inches diameter in the No. 16, and run in boxes adjustable in relation to the cutting bar. Shaft is extended on both sides of the machine so that the pulley or the fly wheel can be placed on either side. **Safety fly wheel** is large and heavy and secured to the shaft by a friction block. The tool steel cutting bar is reversible with four edges; each edge can be used before grinding is necessary. Unless very dull, knives can be ground without removing from cutting head. Cone feed gearing does away with necessity of exchanging gears when different lengths of cut are desired. Gearing is controlled by a safety stop lever, by which all running parts, except the cutting cylinder, can be instantly stopped or started. The lower feed roll is smooth; the upper roll is spiked. The upper roll is driven by expansion gearing and pressure controlled by an equalizer lever, subjected to an even tension spring pressure, which on plain table machines is obtained from a wood spring board underneath table, as shown in illustration, and in traveling table machines from a steel coil spring. Both ends of the roll raise uniformly. **Capacity** of No. 13 machine is from 1½ to 2½ tons of dry fodder or 3 to 5 tons of green fodder per hour, sufficient feed for from forty to fifty head of stock. **Capacity** of the No. 16 machine is from 3 to 4 tons of dry fodder or 6 to 8 tons of green fodder per hour, or sufficient for from sixty to 100 head of stock. No. 13 machine requires from 3 to 4-horse power; No. 16, from 4 to 6-horse power. **When ordering be sure to tell us the size, speed and kind of power with which you intend to operate the machine, and also the size of diameter and face of your driving pulley.** We will then furnish the machine with a pulley of suitable size. Our swivel carrier will deliver at any point within a half circle and can be raised or lowered as desired. Carrier extensions may be ordered in 4-foot, 8-foot or 12-foot lengths. **Illustration shows machine with drop leaf feed table** and with swivel carrier attached. The traveling force feed table is about 8 feet long. The force feed consists of a traveling apron of hardwood slats, attached to special chain belting. This apron is controlled by the same lever which controls the feed rolls, so that one movement of the lever stops or starts both rolls and the feed table. Shipped from factory near Chicago.

No. 32H1540	No. 13 Feed Cutter with drop leaf table.	Wt., 515 lbs.	Price..$29.25

No. 11 KENWOOD POWER FEED CUTTER.

$20.55

The most popular size of power feed cutter. It meets the general demand and there are many features of special merit not found in any other machine of similar dimensions. No feed cutter of its size will do more or better work. Frame is heavy hardwood, strongly braced. Feed table is long, broad and deep with fixed sides, and feed throat is large to permit quick and easy feeding.

Feed rolls are large and driven by expansion gearing. Pressure on upper roll is controlled by the long hardwood spring shown underneath the feed table, and by means of an equalizer bar an equal pressure is maintained at both ends of roll, thus both ends of roll raise equally, preventing binding in bearings. Safety stop lever instantly starts or stops rolls and gearing. Sliding cone gears provide for quick change of lengths of cut.

Has four tempered tool steel knives 11 inches long, which make a downward shearing cut. Steel cutting bar has four edges and all can be used before regrinding. Machine cuts ¼, ⅜ and ¾ inch long or, by removing two opposite knives, cuts will be ½, ¾ and 1½ inches long. Fly wheel is very heavy and has safety friction block. Machine can be operated by power windmills, horse powers or small engines. Pulley is 12x4 inches. Requires about 1-horse power and should run 400 to 600 revolutions per minute and will cut sufficient feed for twenty to forty head of cattle. Capacity per hour, 1 to 1½ tons of dry fodder or 2 to 3 tons of green fodder.

As an additional convenience, we can furnish a crank for occasional hand use, but machine is too heavy for continuous hand use. Crank is extra. Shipped from factory in Southeastern Wisconsin.

No. 32H1530	No. 11 Feed Cutter.	Weight, 380 pounds.	Price.....$20.55
No. 32H1531	Crank for hand use.	Price.....	.60

KENWOOD TWO-HOLE CORN SHELLER.

PRICE REDUCED TO $11.25

Exceedingly well made and handsomely finished. A splendid machine of good capacity. Adapted for general farm, warehouse or custom mill use. The balance wheel is large and heavy. The feed spout is directly over the shelling wheels and the rag irons and springs which control them are adjustable, so that any size of field corn can be shelled. The cob rake separates the shelled corn from the cob, delivers the cobs at a distance from the foot of the sheller and allows the sheller to be run at a good speed and with good capacity without throwing corn out with the cobs. Furnished with fan, feed table, crank and an 8-inch diameter by 4-inch face pulley. When run by power the pulley should make from 300 to 400 revolutions per minute. Capacity is from 25 to 35 bushels of shelled corn per hour. Shipped from factory in Southeastern Wisconsin or Central Ohio.

No. 32H1412 Two-Hole Corn Sheller. Weight, 250 pounds. Price.....$11.25
For Small Hand Corn Shellers see page 1032.

BRADLEY LEVER FEED CUTTER.

REDUCED TO $2.32

A much better made and more satisfactory working machine than is usually found in cutters of this type. Easily worth double the price of a three-legged machine and at least $1.00 more than the ordinary four-legged lever cutter. Frame is of heavy, carefully selected material and nicely finished. Knife is best quality steel, curved to give a shearing cut. Adjustment is positive. Gauge plate is adjustable for different lengths of cut. One of the handiest machines on the farm, always ready for work, never gets out of order. Just the thing for cutting small quantities of feed for immediate use. There is need for one or more of them on every farm. Shipped from factory at Bradley, Ill.

No. 32H1500 Lever Feed Cutter. Wt., 65 lbs. Price.....$2.32

Nos. 8 and 10 KENWOOD HAND FEED CUTTERS.

REDUCED TO $10.28

The best and most durable hand feed cutters made. Capable of greater capacity than any other style of hand feed cutters. Built of the best of materials and in a first class and workmanlike manner. Have gearing to change length of cut, and safety stop lever which instantly starts or stops feed rolls. Feed rolls are governed by an equalizer and the wood spring shown underneath feed table, permitting both ends of upper feed roll to raise equally, preventing binding in its boxes. Have two tempered tool steel knives which make a downward shearing cut against a hardened cutting bar. Will cut either ½ inch, ⅝ inch or 1 inch long, and length of cut may be doubled by removing one knife. Pulley can be attached to shaft. **Pulley is extra.** By power, machine should run 400 to 500 revolutions a minute. **The No. 8 Cutter** has knives 8½ inches long. Capacity, by hand, 200 to 300 pounds of hay or dry fodder or 400 to 600 pounds of green fodder per hour. Capacity, by power, 600 to 800 pounds of hay or dry fodder, or 800 to 1,200 pounds of green fodder per hour. **The No. 10 Cutter** has knives 10½ inches long. Capacity, by hand, 300 to 450 pounds of hay or dry fodder, or 600 to 900 pounds of green fodder an hour. Capacity by power, 800 to 1,200 pounds of hay or dry fodder, or 1,200 to 1,800 pounds of green fodder per hour. Have heavy safety fly wheel. Shipped from factories in Southeastern Wisconsin or Central Ohio.

No. 32H1515 No. 8 Feed Cutter. Wt., 160 lbs. Price.....$10.28
No. 32H1516 No. 10 Feed Cutter. Wt., 255 lbs. Price.....$14.65
No. 32H1517 10x3-Inch Pulley. Wt., 10 lbs. Price.....$1.00

X-L-ALL CORN AND COB CRUSHER AND FEED GRIND

STRONGEST, SIMPLEST AND BEST FEED MILL MADE FOR GENERAL FARM WORK.

The X-L-ALL Grinder contains more desirable features than any other feed grinder of its type. Its over all the higher priced mills of this class has been proven in actual tests, and we claim for the X-L-A more uniform product and a larger capacity with the same power than can be obtained from any other ste designed for the same range of work and power.

The cob crushers, running burr, pulley and fly wheel are mounted on a heavy high carbon steel shaft in anti-friction bearings fitted with closed oil cups. Shaft has a genuine automobile pattern ball bearing Cob crushers are made in sections so that in case of breakage only a small section need be replaced. The frame is cast in one piece, insuring rigidity and strength. The bottom is concaved with sharp ribs against cobs are crushed, and it is hinged on one side and held by wooden break pins on the other, so that in case other hard substance gets into grinder the pins break and the bottom drops down, thus preventing furthe Hopper is heavy sheet steel securely fastened by clamps and can be easily taken off to get at inside of mi

A strong point in the X-L-ALL Grinder is that all working parts are easy to get at. Take out two bo entire front of the mill can be pulled off, exposing the burrs, when they can be quickly changed or any easily made. The fineness of grinding is regulated by a hand wheel which operates against a lever; one lever is carried on an adjusting bolt, and the other end is attached to main frame by a wood break pin. obstruction should get into burrs this pin will break, thus allowing the burrs to spread apart and preventi Burrs cannot run together when empty. Two cut-off feed regulators are provided, one at end of hopper ove the other under hopper back of spout. Spout discharges the ground feed straight down from burrs, thus r burrs from back pressure and preventing clogging. Top of burr case lifts off and burrs can be examined a Legs are heavy unbreakable angle steel, strongly braced and arranged to fasten mill to floor.

The X-L-ALL Grinder will crush and grind corn on the cob or cob alone, also shelled corn, wheat, oats, rye, barley or any kind of small grain, either separately or mixed. It will grind kaffir corn heads if the stalk is cut off close to heads. The three sets of burrs we furnish with every mill provide for a variety of products, ranging from the rough feed with the coarse burrs to as good a quality of table meal with the fine burrs as can be produced on any steel burr mill.

These mills are made in three sizes and four styles. The No. 0 and No. 1 mills have 8-inch burrs and have a capacity of 8 to 15 bushels of ear corn or 15 to 35 bushels of shelled corn per hour, and require 2 to 6-horse power. Pulley is 10x5 inches. The No. 0 mill is furnished without fly wheel, the Nos. 1, 2 and 3 with fly wheel. We recommend the purchase of mill with fly wheel. The No. 2 mill has 10-inch burrs and has a capacity of 12 to 25 bushels of ear corn or 20 to 60 bushels of shelled corn per hour, and requires 6 to 12-horse power. Pulley is 12x6 inches. The No. 3 mill has 12-inch burrs and has a capacity of 40 to 50 bushels of ear corn or 70 to 80 bushels of shelled corn per hour, and requires 12 to 15-horse power. Pulley is 12x8 inches. The No. 3 mill only has a partition in hopper, which is of considerable advantage when grinding oats mixed with corn. Capacities of all mills on oats and other small grains will be somewhat less than on shelled corn, as they cannot be ground so fast. Nos. 0, 1 and 2 mills should be run at speed from 200 to 600 revolutions per minute, depending on the power. No. 3 mill can be run from 200 to 800 revolutions per minute. A forged steel wrench fitting every nut sets of burrs are furnished with every mill; one set of coarse, one set of medium and one set of fine

Prices on the feed grinders do not include the sacking elevator shown in small illustration. This is only when ordered at the extra price shown below. Shipped from factory in Southwestern Ohio.

Improved Little Wonder Grinding Mills.

This is our improved model of one of the most satisfactory grinders we have ever handled. The new improvements consist of an easy feeding sheet steel hopper in place of the old style wooden hopper; the burrs are now made flexible instead of rigid, insuring finer and more uniform grinding and the mill is now supplied with a cut-off feed regulator which permits the operator to feed as much or as little to the burrs as desired. When properly operated, burrs cannot choke and grain is not scattered about the floor. Mill requires from 1 to 3-horse power. Designed for use with power windmills, small gasoline engines, and other light powers. Burrs are 5½ inches in diameter, adjustable for grinding coarse or fine. Grinds all kinds of small grains, coffee, etc. Pulley is 7x4 inches and should run from 700 to 1,300 revolutions per minute. Capacity, 5 to 15 bushels of mixed feed per hour, depending upon speed and fineness of grinding. Burrs cannot run together when empty and nails pass through without injuring the mill. Furnished with one set of coarse and one set of fine burrs. **Fine burrs grind table meal. When ordering extra burrs, state whether coarse or fine burrs are wanted.** Shipped from factory near Chicago.

No. 32H1650 Little Wonder Grinding Mill, as illustrated. Wt., 90 lbs. Price $8.28

No. 32H1651 Pair of Extra Burrs. Wt., 4 lbs. Price 60c

GENUINE FRENCH BUHR MILLS.

STONES ARE PERFECTLY DRESSED GENUINE IMPORTED FRENCH BUHR STOCK.

The leading French Buhr mills of America. They sell under the manufacturer's name for double our prices. Designed for custom mill use where quantity as well as quality of grinding is desired. Grind cool, rapidly and evenly. Spindles are extra heavy steel, accurately fitted to the runner stones and run in long anti-friction metal bearings. Housings are lathe turned and fit perfectly tight. Stones are accurately fitted and trammed and runner stone is balanced on the spindles. These mills can be run by any kind of belt power, can be belted from any direction, will not choke and can be run empty without injury. The 12-inch and 16-inch mills should be run about 1,100 revolutions, the 18-inch and 20-inch mills should be run about 1,000 revolutions per minute. Shipped from factory in Southwestern Ohio.

ACME SWEEP FEED MILLS.

This is the best single geared sweep feed mill you can buy. It does first class work and we recommend it to those who do not require a mill of as great capacity as our triple geared mills. It has cob breakers to break the ear corn and force it into the grinding rings. Warranted not to choke on new or old corn, either damp or dry, but will not grind corn with the husks on. The grinding rings are made of our standard mixture of hard iron and steel, and with proper use they will last twice as long as other makes. They can be gauged to grind crushed cobs and corn to any fineness suitable for ordinary feeding purposes. Average capacity based on coarse grinding of dry corn and cobs or shelled corn for feeding purposes is from 8 to 12 bushels an hour. The regular grinding rings furnished with these mills are coarse and are intended for coarse grinding of corn and cobs or shelled corn for feeding purposes. For finer grinding of shelled corn or for grinding kaffir corn, wheat, oats and other small grains, fine grinding rings are required. Grinding medium or fine reduces the capacity from one-third to one-half. Illustration shows a No. 10B mill. No. 10L mill has iron legs and platform instead of wood feed box. Price is for the mill complete with one pair of grinding rings only, sweep and hitch hook. When ordering mills or extra rings, always state whether you want coarse or fine rings. **Coarse rings shipped unless otherwise specified.** Shipped from factory in Southwestern Ohio.

No. 32H1600 No. 10B Acme Sweep Feed Mill. Wt., 390 lbs. Price $14.30
No. 32H1602 No. 10L Acme Sweep Feed Mill. Wt., 450 lbs. Price 16.60
No. 32H1601 Pair of No. 10 Extra Grinding Rings. Wt., 97 lbs. Price 2.60

This mill is constructed on the ciples as our Little Wonder Grind but is of greater capacity. It is of easy of adjustment and designed to breakage. Intended for use with 6-horse power gasoline engine or of power. Will grind mixed feed corn or small grain in quantities fr 35 bushels per hour, according to fineness of grinding. Burrs are 7 diameter, flexible and self aligning is cast iron, 15x15 inches square cut-off feed regulating device, operator to feed to the burrs any desired. Pulley is 7½x5 inches run from 700 to 1,000 revolutions Mill is mounted on iron legs and per is 38 inches from floor. Furni one set of coarse and one set of Fine burrs grind table meal. When extra burrs state whether coarse or are wanted. Shipped from factory eastern Wisconsin.

IMPROVED FULTON TRIPLE GEARED BALL BEARING SWEEP FEED MILLS.

Have Double the Capacity of Ordinary Geared Mills and From One-Fourth to One-Half Greater Capacity Than Any Other Sweep Feed Mill Made.

Price Reduced from $24.75 to $22.75
No. 1 MILL.

PRICES GREATLY REDUCED.

No other sweep feed mill possesses so many improved features, is so simple to operate, so easy running or capable of as great capacity. Ball bearings support the internal revolving mechanism, do away with all friction, and make the Fulton the easiest running sweep feed mill on the market. **The mill is so light of draft that it usually requires but one horse for average work and two horses can handle it with ease under almost any condition.** The gearing is enclosed and protected from dirt and dust and is self oiling. The cob breaker breaks the ear corn and forces it into the grinding rings. **Guaranteed not to choke on old or new corn, either damp or dry,** but will not grind corn with the husks on. Grinding rings make three revolutions to one round of the horse and are made of a special high quality mixture of iron and steel and with proper use will grind from 6,000 to 8,000 bushels before they will require replacing. They can be gauged to grind crushed corn and cobs to any desired fineness, suitable for ordinary feeding purposes. Average capacity based on coarse grinding of dry corn and cobs or shelled corn for feed is from 15 to 25 bushels per hour when two horses are used. Grinding rings regularly furnished with the mill are for coarse grinding of corn and cobs or shelled corn for feeding purposes. For finer grinding of shelled corn or for grinding kaffir corn, wheat, oats, rye or other small grain, fine grinding rings are required. Grinding medium or fine with fine rings reduces the capacity from one-third to one-half. The No. 1 mill is mounted on a feed box of good heavy lumber. The No. 2 mill is mounted on iron legs and is furnished with a platform. Price is for the mill complete with one pair of grinding rings only, sweep and hitch hook. **When ordering mill or extra rings, state whether you want coarse or fine grinding rings. Coarse rings will be shipped unless otherwise specified.** Shipped from factory in Southwestern Ohio.

BINDER TWINE. Write for Our Low Prices for 1912 on BINDER TWINE.

Digitized by Google

2.50 X-L-ALL FANNING MILL AND SEPARATOR $17.45

Elevator.

grades and separates all kinds of grain and seeds. No matter what the kind or condition of seed, L with proper equipment will clean and grade it, remove all dirt, trash and weed seeds, and also luable seeds the mixture may contain. It will do the same work as high priced mills costing $25.00 and do it better.

you plant carefully selected, clean and graded seed, your crops will diminish each year in yield and ality goes back unless it is bred up. With an X-L-ALL mill you can easily breed up your seed and crops and better prices. Get rid of weeds by refusing to plant them. Take them out of your seed X-L-ALL Fanning Mill.

STRUCTION—Mill is 32½ inches wide, 43 inches long, 44 inches high. Capacity, 30 to 50 bushels depending upon the kind and condition of seed. Screening capacity is 24x24 inches. Only the very best of seed lumber is used, and mill is handsomely finished and painted, strongly put together and made to last. Fan is extra large and has a perfect feed regulator. Fan is enclosed in large sheet steel drum and capacity to give strong steady air blast, insuring uniform work. The lack of wind is a weak point other makes of mills. Driving gears are inside mill, out of way of operator. The mill has a large shoe operated by a shaker elbow. Shoe is suspended by steel spring straps, allowing perfect regulation of shake. The capacity is a great advantage in building up a combination or gang of several screens, as is sometimes necessary of undesirable mixtures which cannot be removed by mere wind blast. Screens are kept clean automatically and kept by a heavy cast iron knocker which attaches to bottom of screen and is operated by the movement of shoe.

shipped crated and all set up, except drum and sacker, which require only a few minutes to attach. Thus you lowest freight rate and are saved the bother of putting a complete mill together.

elevator is an extremely valuable attachment and we recommend that you order it. It saves time and labor, grain off the barn floor, and prevents weed seeds and dirt getting mixed again with the seed. Discharge spout is holds two sacks. When one sack is filled the grain is instantly switched to the other by turning a valve.

UIPMENT—Eight screens and riddles are regularly furnished with every X-L-ALL mill. **With this equipment the mill** and separate wheat, oats, rye, barley, peas, beans, corn, rice, cotton, buckwheat, kaffir corn and broom corn. We can furnish as shown below, other screens and riddles which adapt the mill for cleaning, grading and separating almost every We send with every mill a book of directions telling how to operate the mill for every class of work. It is the most of the sort put out with any fanning mill.

find in our list a suitable equipment, or if you have a fanning mill now of other make which does not do your satisfactorily, send us a small sample of seed and we will examine it for you and recommend an X-L-ALL mill with suitable that will do the work. If you send a sample, address it plainly, **Fanning Mill Expert, Dept. 32, Sears, Roebuck and Chicago, Ill. X-L-ALL Fanning Mills and Attachments are shipped from factory in Northwestern Ohio.**

Complete With Elevator

32H1725 X-L-ALL Fanning Mill Without elevator. Weight, Price $12.50

No. 32H1738 Bean Attachment. For large varieties such as lima, kidney, yao, etc. **When ordering state which kind of beans.** Weight, 8 pounds. Price $1.35

No. 32H1739 Pea and Corn Attachment. For large varieties such as marrowfat peas and horse tooth corn. **When ordering state which kind of peas or corn.** Weight, 8 pounds. Price $1.36

No. 32H1740 Corn Sorting Attachment. Sorts out the misshapen kernels of the tips and butts. Weight, 8 pounds. Price $1.36

No. 32H1741 Wheat Grader with spout. Separate cockle and foul seeds from market wheat. Delivers the big kernels for seed in the front of the mill, the balance of the wheat under the mill, free from foul stuff. Weight, 14 pounds. Price $1.87

No. 32H1742 Timothy Seed Saver. Saves the timothy seed when cleaning oats and wheat. Weight, 14 pounds. Price $1.87

No. 32H1750 Pulley, 8x2½ inches, for operating machine by power. Weight, 7 pounds. Price 50c

$8.75 STANDARD CIDER MILLS.

This is positively the best line of hand cider mills on the market. Strictly high grade in every particular and guaranteed to give perfect satisfaction. The frames are heavy hardwood, strongly bolted together. The mill parts are cast iron and steel. Cross heads for press screws are extra heavy cast iron. Press screws are steel, accurately threaded and fitted. These mills will grind large as well as small apples. **The Junior mill** has a capacity of two to four barrels of cider per day. Tubs are 10 inches high by 12 inches outside diameter. **The Medium mill** has a capacity of three to six barrels of cider per day. Tubs are 12 inches high and 13½ inches outside diameter. **The Senior mill** has a capacity of six to twelve barrels of cider per day and tubs are 14 inches high by 17 inches outside diameter. Each size is back geared heavy balance wheel. Hoppers are large and have The Junior and Medium mills are of the same construction, differing only in size, and are operated by crank. The Senior mill is much larger, is double back and fitted with two cranks. Tubs are strongly made of selected hardwood with heavy wrought iron hoops. No better finished, or stronger made hand cider mills Shipped from factory in Central Ohio.

FORCE FEED CIDER MILL. $6.23

A first class single tub cider mill and press for family use which will do a satisfactory quantity and quality of work. It is a geared cylinder mill which crushes the apples and automatically forces them through the grinding rolls. Large apples must be halved or quartered to obtain best results. It is strongly constructed of the best materials and nicely finished in natural wood. Adapted to a greater range of work than any other single tub mill made, and worth three of the ordinary Hutchinson pattern mills. Capacity is one to two barrels of cider per day. Tub is 12 inches high and 13½ inches outside diameter. Press screw is heavy steel accurately threaded. The ideal mill for family use. Shipped from factory in Central Ohio.

No. 32H2386 Cider Mill. Wt., 150 lbs. Price.....$6.23

BACK GEARED PUMP JACK, $5.85.

Do not confuse this jack with cheap single geared jacks. It is double back geared 1 to 6⅞ and aside from attaching to the pump standard it has two bearing standards which attach to the pump platform, taking all belt strain off the pump, and the jack does not shift its position in any way. Can be used with gasoline or steam engines, horse powers or power windmills. It is fitted with 13-inch by 2¼-inch tight and loose pulleys. Stroke adjustable to 5 inches, 7½ inches or 9¾ inches. The wood connecting rods with the iron cross head can be adjusted to fit any height of windmill pump. Driving pulleys should make about 275 revolutions per minute. Price is for the pump jack complete with pulleys, clamps, connecting rods and cross head for attaching to pump, but does not include pump. Shipped from factory near Chicago.

No. 32H1375 Pump Jack. Weight, 95 pounds. Price.....$5.85

SECURITY GALVANIZED STEEL GRAIN TANKS.

Shipped in Sections. $37.95 Complete with Filling Hopper.

Open. Closed.

Ratproof, rainproof, rustproof, fireproof and thiefproof. Steel grain tanks or granaries are coming more into general use every day. They cost little more than wood, but as they are practically indestructible and give the best protection to grain, they are by far the cheapest in the end. Our granaries are made of **No. 20-gauge** heavily galvanized steel and have galvanized hoops with draw lugs. Made in sections, easily bolted together, making watertight joints. Bottoms have a heavy galvanized angle around the edge and may be set on the ground without drawing moisture. Have four openings, each 8 inches in diameter, which close with slides. The spout may be attached at either opening and grain spouted direct into sack or wagon box. This spout also serves as a door, as shown in the small illustration, and when fastened with a padlock affords perfect protection. Cover has a 25-inch square manhole with hinged cover which can be locked. Tanks 16 feet or more in diameter have two such manholes. A steel hopper to be placed in the port holes, enabling user to shovel direct from wagon, furnished with each tank. Used in the field or in barns. Easily put together or taken down and transported from place to place. Shipped from factory in Western Iowa.

$8.82 Handy Food Cookers.

Full Capacity

In every way the best steel boiler food cooker made. Boiler is made entirely of heavy galvanized sheet steel, strongly bound at top and bottom and has a close fitting hinged cover. We furnish these cookers in two styles: One with sheet steel fire box and the other with full cast iron fire box. Grates and flues of both styles are cast iron. Buy the cooker with cast iron fire box; although it will cost you slightly more, it will last about twice as long as a cooker with sheet steel fire box. Fire flue is 4 inches deep and extends entire length of boiler. A partition in the center directs the heat from the fire box to the opposite end and then back to the smoke pipe. Can be used for cooking food, boiling water and many other purposes, and will burn coal, wood or cobs. Price includes one joint of 6-inch pipe and an elbow. Shipped from factory in Southwestern Michigan.

No. 32H1981a 60-Gallon Cooker, with sheet steel fire box. Wt., 175 lbs. Price **$8.82**

No. 32H1981b 60-Gallon Cooker, with full cast iron fire box. Wt., 200 lbs. Price **$9.95**

No. 32H2365 Rocker Furnace, for 126-inch or 128-inch pans. Wt., 250 lbs. Price **$13.15**

KENWOOD AGRICULTURAL BOILERS.

FULL CAPACITY GUARANTEED.

The highest grade, best made and the most handsome and attractively designed caldron furnaces made. Popular among both farmers and butchers. Can be used for any purpose where a fine smooth kettle is required, such as rendering lard, cooking food for stock, boiling sap, melting lead, etc. Caldrons are made of the finest charcoal iron, very smooth, with black lead finish inside and we guarantee them to be full capacity. Furnaces are cast iron throughout, put together as well as any stove made, and are so pleasing in design that they are a decided ornament to any surroundings. Price is for the furnace and caldron complete as shown, but does not include pipe. The 15-gallon size takes 5-inch pipe; the 22-gallon and the 30-gallon, 6-inch pipe; the 45-gallon and the 60-gallon size, 7-inch pipe, and the 75-gallon size, 8-inch pipe. Furnaces for coal have iron grate and heavy fire brick lining which can be taken out and replaced through the door. Shipped from factory in Central Ohio.

$7.65

For $2.00 to $5.00 less, depending on size, we could sell light weight undersize boilers with furnaces having steel jacket above the fire box and iron linings for coal. We do not consider them good in quality or value, therefore do not handle them.

FARMERS' FRIEND FOOD COOKERS.

Full Capacity Guaranteed.

$4.38

These cookers are constructed to give the best possible results from the very smallest amount of fuel. The jacket is heavy cold rolled steel plate, supported at the bottom by heavy wrought iron bands. Kettles are made of fine grained iron with black lead finish inside, and we guarantee them to be full capacity. The rim of the kettle rests on top of the jacket and the kettle can be easily removed. Cooker is intended to set on the ground. For indoor use, set on a base made of brick and sand. Can be used for cooking food, rendering lard, or for any other purpose where an ordinary kettle can be used. Prices are for the cooker for burning wood, complete with elbow, damper, and one joint of 6-inch pipe. Coal grates and covers are extra. Shipped from factory in Central Ohio.

KENWOOD CANE MILLS.

FOR SORGHUM OR SUGAR CANE.

$16.45

These are extra heavy vertical three-roll mills, possessing all the good qualities of the original Great Western pattern and all the strength of the solid gear models, but without the defects of either. They are strictly up to date cane mills of the highest quality, containing all late improvements and suitable for the heaviest work. They have a bolt at each corner of the frame and are made rigid by a panel at the end. The gears are very heavy and are separate from the rolls and connected by two clutches on each gear. Top and bottom journals run in brass boxes, are oiled from the top and constructed so that oil cannot get into juice. Shafts are steel with turned bearings. Rollers are turned with serrated surfaces. Main rollers are flanged at top and bottom, which prevents the cane from passing either up or down, and the feed guide is made so that the full length of the roll can be used. The gearing is encased. Capacity of these mills is greater than others of corresponding size, because our mills are heavier and much stronger and they press the cane dry. It is impossible to state the exact number of gallons of juice any cane mill will make. This depends upon the richness of the cane, therefore we state capacities in tons of cane per twelve hours. The regular sweep cap is single pitch, as shown in the illustration, but we can furnish double pitch cap, or level top cap if so ordered. Price includes sweep cap, bolts, oil can and wrench. Shipped from factory in Southwestern Ohio.

Catalog No.	Size No.	H. P. Required	Length of Rolls, in.	Diam. of Rolls, in. Large	Diam. of Rolls, in. Small	Capacity in Tons	Wt. Lbs.	Price

DAVID BRADLEY SAW FRAMES

No manufacturer can possibly produce a better line of wood and pole saw frames than these, and you cannot purchase for any price a more strongly made or better finished saw frame. They are the best made and best finished frames on the market and are worth one-fourth to one-half more than lightly constructed, cheaply made saw frames put out by others. Our saw frames are made in the famous David Bradley factory and they bear the David Bradley trade mark, which is a guarantee of supreme high quality. Frames are made of heavy selected hardwood, strongly bolted together, and painted with a bright red oil paint with gloss, not the cheap mineral paint which is generally used by others. Shafts are heavy 1½-inch cold rolled steel and run in ample babbitted bearings which are connected by a heavy iron frame, insuring perfect and permanent alignment. Wood and iron parts are heavy, well finished and well painted. Frames are shipped as shown in the illustration to the left, thus securing a much lower freight rate than other methods of shipping. Directions for setting up accompany each frame. **Our cut-off saws are especially made for use on these saw frames. They are filed and set, ready for use, and are fully guaranteed to give perfect satisfaction.** 20 or 22-inch saws should run from 900 to 1,400 revolutions per minute and require 2 to 3-horse power; 24 inch saws should be run from 800 to 1,200 revolutions per minute and require 4-horse power; 30-inch saws should be run from 700 to 1,000 revolutions per minute and require 5-horse power. **Rip saws cannot be used on these frames** and 30-inch is the largest cut-off saw that can be used.

DAVID BRADLEY POLE SAW FRAMES.

Right Hand Frame.

The Highest Possible Quality.

The strongest, best constructed and most popular Saw Frame in the country. Suitable for sawing cord wood and long poles of every description. The mandrel shaft is 4 feet 1 inch long with 1⅜-inch saw arbor and 5-inch arbor flanges. It has grooves in boxes to prevent end play. The mandrel shaft boxes are connected together with an iron frame which keeps them in perfect alignment. The center tightening pulley is hung on a heavy cast iron bracket with heavy steel shaft, and is so strongly made that it cannot get out of line. All pulleys are 5 inches diameter and 6-inch face. Balance wheel weighs **100 pounds.** The cast iron saw guard is adjustable to fit saws from 20 inches to 30 inches in diameter. Can furnish either right or left hand frame but **we always ship right hand frame** unless left hand frame is ordered. Shipped knocked down from the big David Bradley factory at Bradley, Ill.

HIGH QUALITY ROAD SCRAPERS.

We guarantee these scrapers to be absolutely the best and most substantial scrapers made. Made of highest grade 40 to 45-point carbon low sulphur scraper steel. Do not confuse them with low quality tank steel scrapers offered by others in order to compete with our low prices. These scrapers are made for us by old and reputable manufacturers, acknowledged to be producers of the highest grade road machinery in the world. You cannot possibly buy better than these, no matter what price you pay. Order and compare our scrapers with any you can buy, and if you are not satisfied that our scrapers are equal to, if not better than others, and that at our price they are the best value you ever saw, send them back and we will gladly return your money and pay all freight charges. **Bowls are pressed from single sheet of heavy specially hardened steel plate, making a round cornered and horsed bowl which scours and cleans easily.** The nose is rounded and enters the soil easily. Have heavy steel ball, swivel hitch and hardwood handles. Smooth bottom do not have runners on the bottom. Double runner scrapers are the favorites and have steel runners, each about 1½ inches wide and ⅝ inch thick. Single runner scrapers have broad single runner made of a single heavy steel plate. No. 3 size holds 3½ cubic feet and weighs 80 pounds. No. 2 holds 5 cubic feet and weighs 90 pounds. No. 1 holds 7 feet and weighs 100 pounds. Shipped from factory in Western Ohio.

WOOD WHEEL SCRAPERS. $55

Sarven Hub Wheels

are made from a single sheet of the grade 45 to 50-point carbon low sulphur steel 3-16 inch thick, and shaped for the greatest strength and carrying. Cannot sag under the most severe load. Hound hooks are stationary, very and carry the bowl high up from the axle is high, made of best quality steel. Spindles are turned and polished protected by close fitting sand caps. No. 1 has 9 cubic feet capacity, 36-inch wheels, 3x¼-inch tires and 1½-inch axles. No. 3 has 13 cubic feet capacity and wheels with 3x¼-inch tires; and 1½-inch axles, and No. 3 has 17 cubic feet capacity, 44-inch wheels, with 3x5-16-inch tires and 1⅝-inch axles. **Wheels have Sarven hubs.** Shipped from factory in Western Ohio.

32H2532 **No. 3 Scraper.** Price..... 37.65

ACME STEEL ROAD SCRAPERS, $3.23.

These scrapers are of the same form and construction as our High Quality Road Scrapers shown above, differing only in the quality and weight of the steel in the scraper bowl. Enter the ground easily and scour nicely, and if you do not use a scraper extensively they will probably wear long enough to satisfy you. We guarantee these scrapers to be better than any scrapers you can buy for prices less than we ask for our **High Quality** Road Scrapers. But if you want a scraper for long wear and hard usage, we advise you to buy our **High Quality Scrapers.** No. 4 holds 3½ cubic feet and weighs about 75 pounds. No. 5 holds 5 cubic feet and weighs about 85 pounds. No. 6 holds 7 cubic feet and weighs about 95 pounds. Shipped from factory in Western Ohio.

Cast Iron Stone Boat Head, $1.95

Don't pay freight on the woodwork part of a stone boat. With this iron stone boat head you can make a stone boat and use any straight plank you may happen to have and it will outwear several sets of plank. The head is 29 inches wide; heavy and strong. It will last a lifetime. Shipped from factory near Chicago.

No. 32H2550 **Cast Iron Stone Boat Head.** Wt., 70 lbs. Price.....$1.95

David Bradley Extension Table Wood Saw Frames.

100-Pound Balance Wheel. **$12.33**

Right Hand Frame.

For sawing poles or regular 4-foot cord wood. The table can be set at the side for sawing long poles, as shown in the illustration, or it can be set in front of the saw frame in the usual manner for sawing cord wood. The shaft is 4 feet 5 inches long with 1⅜-inch arbor and 5-inch arbor flanges. It has grooves in the boxes to prevent end play. The boxes are connected together by an iron frame which keeps them in perfect alignment. **Driving pulley is 5 inches in diameter, with** 6-inch face. Balance wheel weighs **100 pounds.** The cast iron saw guard is adjustable to fit saws from 20 inches to 30 inches in diameter. Can furnish right or left hand frame but **we always ship right hand frame** unless left hand frame is ordered. If machine is wanted without extension parts for table deduct 55 cents. Shipped knocked down from the big David Bradley factory at Bradley, Ill.

WRITE FOR OUR PRICES ON STEEL AND CAST IRON CULVERT PIPE

IDEAL REVERSIBLE FARM AND ROAD GRADER.

Saves Time, Labor and Horse Flesh.

Does the work of a $250.00 Machine.

Beware of Imitators

This machine has a reversible blade which sheds the dirt and can be set to throw it to the right or left. With it one man and one team will do the work of a $250.00 horse killing grader which requires three men and three teams or more, and do it better because the machine can be worked at times and in places where a large machine could not be used. Made entirely of iron and steel. Beam with blade attached is 12 inches wide and 6 feet long. Machine measures 6 feet from center of front trucks to center of rear trucks. Front wheels are 16 inches high. Rear wheels are 12 inches high and swivel to reverse with the blade. The angle at which these wheels work and the shoe back of the blade prevent the machine from sliding when properly operated. The blade can be set to work straight ahead or reversed to either angle by merely loosening the catch on the front arch and turning team to the right or left. Front wheels have both caster and ball and socket action. Levers on the rear wheels raise, lower and tilt the blade to the desired angle. Machine is tongueless and so easy on the team that it can be easily worked for ten hours at a stretch. Will turn any place a team can turn. Blade has suction point and can be adjusted to cut as deep as can be easily worked. Of great value in leveling fields and barnyards and keeping lanes and driveways in order. **Call the attention of your township officials to this wonderful machine.** Shipped from factory in Central Ohio.

Price Reduced to **$32.75**

No. 32H2542 **Farm and Road Grader.** Wt., 535 lbs. Price.....$32.75
No. 32H2543 Extra Blade. Price..... 1.90

ECONOMY FARM AND ROAD DRAG.

Can be used for leveling fields, roads, lanes, etc., for cleaning barnyards, and numerous other purposes. By means of lever blades can be pitched to angle desired. Hitch is adjustable so that the drag can be drawn at any angle so as to work the soil off the end. Frame is flexible and allows each blade independent freedom of movement. Drag is 7 feet wide and made entirely of iron and steel, excepting the foot plank. Extra blades $1.87 each. Shipped from factory in Central Ohio.

$13.35 Without Seat.

No. 32H2545 **Economy Drag.** Wt., 315 lbs. Price without seat, **$13.35**; with seat.....$14.35

48-INCH TONGUE SCRAPER

$4.63

For cutting and cleaning out ditches and moving large quantities of earth. Draw bars and bit are made of the best quality of steel. Body, tongue, crossbar and handles are made of seasoned hardwood, well ironed and bolted. Shipped from factory in Western Ohio.

No. 32H2520 **Tongue Scraper,** with 48-inch blade. Wt., 135 lbs. Price.....$4.63

DOAN DITCHING SCRAPER.

$4.33

An excellent Scraper for cleaning out and filling ditches and for leveling roads and uneven places. Is well made of seasoned hardwood. Steel bit is 48 inches long, 7 inches wide and ¼ inch thick. This scraper is well ironed, has 1¾ by ¾-inch steel hounds, with ⅜-inch cable chain. Shipped from factory in Western Ohio.

No. 32H2525 **Ditching Scraper.** Wt., 75 lbs. Price.$4.33

Our Famous Crystalline Metal Bells

Illustration shows a Schoolhouse and Factory Bell.

$6.08 AND UP.

For Schoolhouse, Factory and Church Guaranteed for Five Years Against Breakage.

Celebrated for their volume of sound and for their loud, clear, round and sweet tone. Our crystalline bell metal is a superior composition metal of high quality, and bells made from it are worth many times as much as so called alloy and cast iron bells. Our bells give almost as good satisfaction as the best copper and tin bells, which, of course, sell for much higher prices, and the same amount of money invested in one of our bells that you would invest in a copper and tin bell will secure a bell with a greater volume of sound, and a farther reaching, more satisfactory tone. Thousands of schools, churches and factories use our crystalline metal bells in preference to all others.

We allow sixty days' trial on every Crystalline Metal Bell. We expect you to give it a thorough trial, compare it in tone, volume and quality with composition bells of any other make, and if you find any reason to be dissatisfied, you can return the bell to us at our expense and we will return to you every cent you paid us for it and freight charges.

For Farm Bells See Page 1033.

We guarantee these bells for five years against breakage, and should any piece or part break through defect in material or workmanship, we will furnish a new piece or part to replace the broken part, or, if necessary, we will furnish an entirely new bell free of charge. When you buy a bell from us we guarantee absolute satisfaction, protect you against defect, save from one-fourth to one-half in price and give you greater value than you can possibly obtain elsewhere.

Our schoolhouse, factory and church bells are all of the same general design. They differ only in size and in the fact that our 44 and 48-inch bells are mounted on **indestructible roller bearings.** These bearings enable one person to ring our largest bells with as great ease and regularity as a small bell can be rung. Bells 24 inches and larger are fitted with **our improved springs and clapper,** which insure a full stroke of the clapper without the possibility of a second stroke. Iron rope wheels are furnished with 20 to 36-inch bells and sectional wood rope wheels with 38 to 48-inch bells. **A tolling hammer is furnished with church bells.** Weights and prices are for the bells complete with frame, wheel and wood sills. Shipped from factory in Central Ohio.

GENUINE DANDY GREEN BONE CUTTERS.

$8.85 and up.

Made by the Stratton Manufacturing Co. The World's Best.

Nos. 9, 10, 11 or 12 CUTTERS

$17.45 AND UP

No. 13 CUTTER

We guarantee them to be the very best, most durable, easiest running and most satisfactory green bone cutters made, and that with the same amount of power applied they will cut more green bone than any other machine made. Cut dry or green bones with the meat on just as they come from the butcher shop, without clogging, and fine enough for chicks four days old. **Nos. 9, 10, 11 and 12 machines** have three solid tool steel knives. Two are corrugated and these cut grooves into the end of the bone as it is fed up to them. **A straight knife** follows, which makes a clean, smooth cut through all the meat and gristle, obviating the stringy texture of the cut bone, which other cutters produce. **Nos. 9, 10, 11 and 12 machines** mounted on low legs, as shown in the illustration of the No. 13 machine, or on high legs, as shown in larger illustration. The feed is automatic and adjustable. Nos. 9 and 11 have a solid nut on the feed screw and the feed screw must be turned back when filling the bone box, but Nos. 10 and 12 have a split nut which allows the feed screw to be pulled back instantly. Balance wheels are very heavy and the cutters operate easily. The Nos. 9 and 10 cutters have a bone box 3½x3x11 inches inside and are suitable for a flock of from 100 to 150 fowls. The Nos. 11 and 12 cutters have a bone box 4x3x13 inches inside and are suitable for a flock of from 200 to 250 fowls. By ordering our No. 32H3233 pulley with either of these machines they can be run by power and the capacity will be fully double what it is by hand. No. 13 machines have bone box 4x4x20 inches inside. They have three corrugated and one straight knife and when run by power are suitable for a flock of 1,500 fowls. When run by hand, being geared 4 to 1, they turn easily and are suitable for a flock of 400. They have split nut and adjustable automatic feed and a safety device which stops the feed if iron or other metal gets in bone box. **No. 13H** has balance wheel and handle for hand use only. **No. 13HP** has balance wheel, handle and 12x4-inch pulley and is for hand or power. **No. 13P** has no balance wheel or handle, but has 12x4-inch tight and loose pulleys and is for power only. Shipped from factory in Western Pennsylvania.

No. 0B DANDY GREEN BONE CUTTER, $6.90.

Back geared, operated by handle on rim of large balance wheel; suitable for a flock of 50 to 75 fowls. Made with a standard and is to be fastened to a bench. The bone box is 3¼x4⅝x6 inches inside. It is fed by a hand feed screw which has a split nut that swings entirely out of the way when filling bone box. Cutter has one straight and two corrugated knives. Guaranteed better than any other cutter of similar size or price. Shipped from factory in Western Pennsylvania.

No. 32H3200 No. 0B Bone Cutter. Weight, 75 pounds. Price $6.90

HUMPHREY'S CLOVER CUTTERS, $7.45 AND $9.45.

A rapid, easy turning cutter which will reduce clover to ⅛-inch lengths for feeding poultry. The cutting knife has five edges and being geared 8 to 1, gives forty cuts to each revolution of the fly wheel, while the ordinary clover cutter gives ten or twelve. It cuts to uniform lengths. The reversible table knife, as well as the circular cutter, is made of the hardest white iron **cast on a chill,** harder than you could possibly temper steel. Made with stand or legs, and as a bench machine without legs. Shipped from factory in Northern Illinois.

No. 32H3125 Clover Cutter without stand. Wt., 85 lbs. Price. $7.45
No. 32H3126 Clover Cutter with stand. Wt., 108 lbs. Price. 9.45

Kenwood Stump Pullers

We offer the most complete line of high class stump pulling machinery and attachments made, and our low prices will prove a revelation to any buyer. No stump puller will clear your lands so quickly, so satisfactorily and at such a small cost, not only for the machine itself, but also for labor, as will the Kenwood. We have sold them for years and thousands are in satisfactory use. In our Special Stump Puller Circular we not only price, illustrate and describe our complete line of stump pullers, multiplying power pulleys, cables, rope take ups, stump and root hooks, etc., but we give you the most expert advice as to the style and size of machine and attachments required to do your work. We also show large illustrations of the machines at work in different parts of the country and publish many letters from users of Kenwood Stump Pullers, telling of the wonderful feats of stump pulling accomplished with them. **Send for this free circular.** Do not even consider the purchase of any stump puller until you receive and read it. **We can save you big money** and our liberal trial offer protects you from any possible loss or disappointment and makes the Kenwood the best and safest, the cheapest, for you to buy.

$8.85 Imperial Double Wall Incubators $8.85

FOR 80-EGG SIZE. FOR 80-EGG SIZE.

New Styles, New Sizes, Greater Values —— Self Regulating, Self Ventilating, Self Moistening.

SUCCESSFUL IN ALL CLIMATES. HIGHEST AWARD AT SIX SUCCESSIVE WORLD'S FAIRS.

Kiser, Arondo, Wash., says: Talk hatching chickens. Got ninety-two lively chicks out of ninety-six eggs I put in a moist cellar. Your beats anything in this part of the

Handley, Spencer, Va., says: The Incubator is one of the best on the I hatched 125 chicks out of 150 first time.

Jones, Southport, La., says: For three Incubator has given wonderful results. Six days ago I had a 90 per cent

Sandy, Utah, says: Your incubator has given entire satisfaction. The I hatched fifty chicks from sixty eggs and every one with your brooder, not

F. Frain, Pokegama, Ore., says: The I used the Imperial Incubator I ninety-two chicks from 107 eggs, my experience. Saved at least $7.00.

GUARANTEED TO HATCH EVERY FRESH AND FERTILE EGG, TO BURN LESS OIL AND TO PRODUCE STRONGER CHICKS THAN ANY OTHER INCUBATOR MADE.

SIXTY DAYS' TRIAL

PERFECT HATCHES ASSURED if you buy an Imperial Incubator and follow the plain and simple directions we send free with every machine. No experience necessary, even a child can operate them; just give the incubator fresh, fertile eggs, follow our simple instructions and the machine will do the rest. Made expressly for us by one of the oldest and largest incubator makers in the world. Winners of highest awards at Brussels, Chicago, Paris, Omaha and St. Louis World's Fairs and hundreds of other expositions. For thirty years these incubators have been **the world's best** and they always will be because they are made by the most expert and progressive incubator manufacturers in the business.

SEND FOR OUR FREE INCUBATOR CATALOG if you wish to learn more about these wonderful hatching machines, how they are made, why they are the best, etc. This book also contains a world of information interesting and valuable to every poultry raiser.

OUR SIXTY DAYS' TRIAL OFFER. Order an Imperial Incubator and use it according to our plain and simple directions **for sixty days from the date you receive it.** This gives time enough for you to bring off at least two hatches, and if at the expiration of this trial period you are not satisfied that the Imperial is in every way the satisfactory machine we say it is; **the best incubator you ever saw or heard of,** return it to us at our expense and we will return you the price you paid us for the incubator, together with freight charges.

Imperial Incubators are made with either hot air or hot water heating systems. Heating pipes, etc., of the hot air machines are made of steel. Water tanks of the hot water machines are made of **heavy 14-ounce cold rolled copper and will not rust out.** Incubator cases are made of selected bone dry cypress lumber, proof against moisture and atmospheric changes and warranted not to crack nor warp. Walls are double and filled or insulated with the best non-heat conducting packing known. Tops are packed with alternating layers of wool and fiber. Doors are double, close against perfect fitting jambs and have glass fronts so you can see all parts of the egg chamber without opening. **Egg Trays** are strongly made, have screen bottoms, and our patent turning racks which turn all eggs at one operation. The 80 and 120-egg incubators have one tray, other sizes have two. **Nursery space** under egg trays accommodates young chicks as hatched. Lamp bowls are heavy galvanized steel with metal chimney. Burners are highest grade. The fluid pressure bulb regulator is reliable and accurate at all times and indestructible; it consists of a compound arrangement of levers, operated by a metal disc filled with a fluid which expands at a temperature just under 103 degrees and regulates the temperature of the egg chamber. Thermometers are the best, made especially for incubating purposes. They are thoroughly tested and seasoned for one year before using. Heater parts are steel, and are enclosed in the incubator case. All sizes rigidly mounted on nicely turned legs. **Capacities** given are the number of average size hen's eggs the machine will hold when patent turning rack is **not** used. When turning rack is used, capacities are reduced about one-third. Machines are nicely finished in the natural wood and highly varnished. **Price is for the complete incubator,** ready to operate. All you need supply is the oil for fuel, and the eggs. Our simple directions tell how to test the eggs as well as how to run the incubator. Follow them and **we guarantee the Imperial Incubator to hatch every fresh and fertile egg** and to produce stronger, healthier chicks than any other incubator made. Shipped from factory in Western Illinois.

120-EGG AND 220-EGG SIZES ARE THE BEST FOR GENERAL USE. WE RECOMMEND THE PURCHASE OF A HOT WATER INCUBATOR.

R. Beck, Harvard, Ill., says: The Imperial Incubator is safe, simple and convenient. Cannot find one fault with it. Does better work than any other in this locality, and burns less oil.

A. H. Normar, Concord, Tenn., says: The Imperial Brooder is O. K. Have raised three broods and have not lost a chick. I can put seventy eggs in your 65-egg incubator and it never fails to work.

J. L. Duckworth, Magee, Miss., says: The 120-egg Imperial Incubator is as good as it can be made. Had five hatches with the best success. It is simple and easy to handle and economical with oil. Have put as many as 135 eggs in it.

Bernard Devar, Coal City, Ill., says: Your Imperial Incubator certainly does run fine. It is the best on the market. Got 162 chicks out of 180 eggs the first time, 143 chicks out of 160 eggs the second hatch.

Outdoor Brooders.

New Sizes

Wood Poultry Vegetable Cutter, $3.40

Only for poultry stock. Cuts of roots and into fine ribbons, which easily eaten by Green food mixed can be with the soft meal is fed to Has adjustable knives and is with an iron which allows and gravel to escape before reaching Suitable for a flock of any number chicks up to 1,000. Price does not include measure. Get your neighbor to let one for him also and save in charges. Shipped from factory in Michigan.

32H1390 Poultry Vegetable Cutter. Wt., 8 lbs. Price.....**$3.40**

Wyandotte Indoor Brooders.

$2.92 AND UP New Sizes

Intended for use within a building, but in mild weather may be used out of doors if protected by a shed roof. Built on the "mother hen" plan, that is, the heating apparatus is in the top, as it should be. These brooders are divided into two compartments by a curtain of heavy woolen cloth; one compartment is about fifteen degrees warmer than the other, and the chicks can go to or from the heat at will. Pure air circulation is perfect and the brooders maintain an even temperature. The hot air and hot water brooders are identical in construction, except that the hot air tanks are steel while the **hot water tanks and reservoir are made of copper.** Fumes from the lamp cannot enter the brooding chamber, and lamps are placed and protected so that they are absolutely safe under all conditions. Lamp bowl and exposed parts of heater are heavy galvanized steel. These brooders have single door with glass panel, easy to clean and furnish plenty of light. While these machines will give perfect satisfaction when used indoors, we recommend that you select an outdoor brooder because it can be used with equal success indoors or out of doors. Every poultry raiser should have one or more brooders. They are absolutely necessary in order to experience the best of success. You cannot always intrust your chicks to the care of a hen with safety, for she is apt to abandon and neglect them and the increased number of chicks you will raise by using a brooder will more than pay for the machine. The brooder method is the only successful way in which to raise young chicks. Price includes a high grade thermometer, a runway, an instruction book and all attachments. Shipped from factory in Western Illinois.

$4.65 WYANDOTTE INCUBATOR

THE BEST SINGLE WALL INCUBATOR MADE.

HOLDS 65 EGGS

Designed especially for beginners and small poultry raisers. Made in one size only and intended for use in a room where the external temperature is practically even at all times and when properly operated will hatch just as large a percentage of eggs as any incubator made. If a small incubator of this character will meet your requirements, this machine represents the best value you can obtain anywhere, but we recommend that you purchase an Imperial Double Wall Incubator because you will find it possible to operate it with better success in rooms where the temperature is subject to change. We also recommend that you use a 120-egg or larger incubator because it will cost you no more for fuel than a small one and you can hatch a great many more chicks with practically no more labor and expense than you would be put to with a machine of less capacity. The Wyandotte is positively the best single wall machine on the market; material, workmanship and finish are first class. The case is made of thoroughly seasoned, bone dry lumber which will not warp nor crack and is smooth dressed, well varnished and finished in natural wood color. It is mounted on nicely turned legs. Has ventilated bottom and the top is insulated with best non-heat conducting packing. The door is single, has double glass and closes against felt jambs. Egg tray is well made and has screen bottom; a nursery space below it accommodates young chicks as hatched. Regulator is the same as used on our Imperial Incubators. Heater jacket and lamp bowls are heavy galvanized steel. Heater pipes are steel. Hot water tanks on the hot water machines are **heavy cold rolled copper.** Price includes a high grade thoroughly tested thermometer, an egg tester and complete instruction book. Shipped from factory in Western Illinois.

No. 32H3035 65-Egg Wyandotte Hot Air Incubator. Wt., 50 lbs. Price.....**$4.65**

No. 32H3036 65-Egg Wyandotte Hot Water Incubator. Wt., 55 lbs. Price... **6.40**

Peerless Root Cutters, $6.85

An exceptionally high grade and efficient machine. Will cut all kinds of roots and vegetables to be fed to stock. Is fitted with small half circle steel knives. Runs easily, feeds itself, separates the dirt from the roots before reaching the knives and will not choke under any circumstances. Made in two ways. **The No. 1 Cutter,** with crank only, with a capacity of 30 to 50 bushels an hour. **The No. 2 Cutter,** with both crank and pulley, which, when run by power, will easily cut from 60 to 80 bushels an hour. Shipped from factory in Southern Michigan.

No. 32H1395 No. 1 Root Cutter. Wt., 120 lbs. Price.....**$6.85**

No. 32H1396 No. 2 Root Cutter. Wt., 135 lbs. Price.....**$7.85**

$13.50 AND UP Kenwood Ball Bearing Windmil

THE EASIEST RUNNING, LONGEST LASTING AND M

HONESTLY CONSTRUCTED WINDMILLS MADE

Self Governing, Adjustable Stroke, Large Self Feeding Waterproof Oil Cups. High Grade Babbitt Bearings, Double Nuts at Every Bolt. ALL GALVANIZING DONE AFTER COMPLETION. Surface and Edges, Joints, Rivets, Bolts and Nuts Thoroughly Galvanized. That's Why Kenwood Windmills are More Rustproof Than Others.

ILLUSTRATION SHOWS A BACK GEARED STEEL WINDMILL.

THE BEST WINDMILL FOR YOU TO BUY

is the Kenwood, not only because our prices are about one-half what others ask for any of the standard makes of windmills, but because it is positively the best windmill made, the most strongly built, the most honestly constructed, the easiest running, the most efficient, the most rustproof and the best wearing windmill ever produced. Aside from this, it is the easiest windmill to erect. **You need not go to the expense of hiring expert help to put up these windmills.** You can do this work yourself with but little assistance and just as well as any windmill expert could do it. We have devoted years to the sale of windmills and have found out how to produce mills which even in the hands of the most inexperienced will go together easily and properly. We believe that ninety-nine out of every one hundred farmers can easily put together and erect our mills and towers without the aid of directions of any kind, but to insure our customers against any difficulties in this work, we have prepared complete directions, explaining in the simplest manner possible how to quickly, economically and correctly erect Kenwood windmills and towers. **We send a copy of these simple directions with every windmill or tower** and we guarantee them to make it possible for you to erect the mill or tower as easily and quickly as it would be possible for any expert to erect it. We tell you where every piece or part of the mill or tower belongs, how you should place it in position and the safest economical way for you to raise a mill and tower after it has been put together. We have received hundreds of letters from [illegible] telling us how easy they found it to erect our mills and how much money they saved by not being compelled to employ a windmill [illegible] as they would have had to do with other mills. We can honestly say that in all our years in the windmill business we have [illegible] of anyone who has not found it perfectly easy to erect our mills and towers. You cannot afford to buy any other windmill than a [illegible] wood because, aside from saving you about one-half, we will give you a better mill than you could possibly buy elsewhere, one [illegible] will find easier to erect, lighter running, longer lasting, handsomer and in every way more satisfactory than any other mill at any [illegible]

WE GUARANTEE

every Kenwood Windmill when properly erected and cared for according to the instructions we furnish to run in lighter winds, endure as hard service and to prove to be as durable and accomplish as much work as any other make of windmill of corresponding size and style, regardless of price. We also guarantee every piece and part of our windmills and towers to be free from defect, either in material or workmanship, and we will replace free of all charge any part which may break or give out on account of such defect. This guarantee is in full force and effect for one year from date you receive the mill or tower.

WHY THE KENWOOD IS THE BEST.

They are made heavy enough and strong enough to withstand great wind stress usage, the engine heads as well as the material used throughout the mill [illegible] heavier than will be found in most of the highest priced windmills on the market. **Our 10-foot windmill weighs from 150 to 200 p[illegible]** than the majority of 10-foot mills of prominent makes. The heavier the mill, the more it costs to make, and while we could m[illegible] money and still further outdistance competition by having our windmills made lighter, we refuse to sacrifice strength or quality for price. **All bearings are of ample size to give strength and solidity,** and are lined with highest grade babbitt metal, which experience has proven to be the best for the purpose. **Large self feeding waterproof oil cups** insure ample and positive lubrication with but occasional filling. **Wind bearings,** which reduce the end thrust friction, making the mill run in **wheel hubs have ball** the lightest of winds. **Turntables also have ball bearings,** which make the mill respond and turn more quickly when the wind changes direction. **The governor is self acting** and reliable under all conditions. It is of the weight and lever type. No springs to weaken nor break. In high winds the mill is automatically thrown out of gear; as the wind subsides it goes back into gear of its own accord. The governor does it all, no assistance from you necessary. Aside from being the heaviest, strongest, best made and easiest running mill on the market, the Kenwood is the most handsomely finished and attractive of all windmills. The wind wheel, rudder, all braces and every bolt and nut on Kenwood Steel Windmills are heavily galvanized and the wind wheel sails and rudder sheets are tipped with a brilliant red. **All galvanizing is done after each part is completed,** making it impossible for water to get at the rivets or into the joints to rust them away. The Kenwood is one of very few mills which are made in this way and this is one reason why they are so much longer lived than others. We have sold these windmills for years; they are made for us by one of the most prominent windmill manufacturers in the United States and if you are at all familiar with windmills you will recognize in the Kenwood a mill for which, if you were to buy from the manufacturers or their agents, under their own name, you would pay at least double our price. These manufacturers have for years been known as the most expert windmill makers in the world.

IF YOU WANT AN OUTFIT LIKE THIS SEND FOR OUR FREE WINDMILL CATALOG.

YOUR NAME ON THE RUDDER FREE.

If you so desire, we will stencil your name on both sides of the rudder without charge, or if you wish we will send the windmill with a plain rudder, or we will leave off the brand Kenwood and stencil your name and the name of your town on both sides of the rudder. We often do this for dealers who sell and erect our windmills. If you wish your name on the rudder, be sure to say so in your order and carefully print your initials and name so as to prevent mistakes.

WRITE OUR WINDMILL EXPERT

If you cannot make up a suitable windmill outfit from the goods shown in this catalog. Our line of windmill goods is the most complete in the United States. We can supply you with any kind or size of a windmill outfit you want, a Suburban or Combination Outfit with tank in the tower, deep well and irrigation outfits, power windmill outfits, 14-foot and 16-foot windmills, extra heavy towers and tank structures, in fact, anything and everything in the windmill line. Write for our **free Special Windmill Catalog.** Our profusely illustrated special catalog will be sent you, offering the widest selection and containing complete information on this important subject. If you tell us the kind and depth of well you have, the work you want to do, etc., our windmill expert will submit to you an estimate of just what you require and quote you the lowest prices you can obtain anywhere on windmills, towers, tanks, pumps, cylinders, pipe, fittings, etc. Address, **Windmill Expert, care of Sears, Roebuck and Co., Chicago, Ill.**

OUR WINDMILLS ARE MADE IN THREE STYLES:

Back geared steel windmills, as shown in the large illustration, direct stroke steel windmills, and direct stroke wood windmills. The back geared steel and direct stroke steel windmills differ only in the gearing, length of stroke, in the curvature of the wind wheel sails and in that **the direct stroke mill has an auxiliary side rudder.** OUR DIRECT STROKE WOOD WINDMILLS are the same as the direct stroke steel mills with the exception that the wind wheel and rudder are of wood, painted white, with bright red border. They are great favorites in the Southwest and along the salt water coast. Prices are for the windmills complete and include pump pole, pull-out wire, reefing gear, bed plate and truing spider with which the mill is to be attached to a tower or mast, but price does not include a tower or platform. When windmill is ordered without tower, we will ship it with bed plate and truing spider for a four-post wood tower and with pump pole and pull-out wire for a tower 40 feet high, unless otherwise ordered. **We send complete instructions for erecting windmills and towers** and for building wood towers. Shipped from factory in Northeastern Indiana.

The Kenwood Alw[illegible] Satisfies

Mrs. N. Peck, Ossian, Iowa, says: The K[illegible] windmill bought two and one-half years ago h[illegible] cost one cent for repairs. We had a terrible storm here which ruined half of the mills arou[illegible] but the Kenwood was not hurt a bit.

W. L. Judkins, Chadron, Neb., says: I ne[illegible] a piece of machinery around that has given satisfaction than the Kenwood windmill. It for[illegible] water up a grade of 12 feet for a distance of 2[illegible] to the barn. I could not ask for greater va[illegible] my money.

A. C. Van Velzer, Houston, Texas, says: Th[illegible] wood windmill and tower are perfectly satisfacto[illegible] saved about $16.00 on original cost. A common [illegible] and myself erected it one Sunday afternoon as [illegible] tion by following your detailed instructions [illegible] about $10.00 on that item.

Charles H. Burnham, Touisset, Mass., says: [illegible] repaired and erected windmills for twelve year[illegible] have never found a windmill quite as simple [illegible] Kenwood. It has no complicated parts. No[illegible] compete with it for ease of operation, quietne[illegible] easy pumping in a gale. The governor takes c[illegible] it perfectly. We erected and had the mill ru[illegible] operate in 48 hours after receipt. We saved $27.00 on it.

F. J. Potter, Holley, N. Y., orders a K[illegible] Windmill and says: This makes five Kenwood mills I have bought of you in the past three [illegible] We had a gale here which blew down hun[illegible] hundreds of trees, unroofed schoolhouses and [illegible] down all kinds of windmills, including all [illegible] makes, but all the Kenwoods are safe and sou[illegible] am ordering this mill for a neighbor whose [illegible] destroyed, and who is now going to have a K[illegible] which I am thoroughly satisfied is the best and [illegible] complete windmill on the market, regardless of [illegible]

KENWOOD FOUR-POST WINDMILL TOWE[illegible]

GALVANIZED AFTER COMPLETION.

$13.48 AND UP

Our Steel Towers are of the strongest possible construction. They are made of the best of materials and are properly proportioned and braced in every way. Every corner post, brace, band girth, bolt and nut **is heavily galvanized after all cutting, punching and other machine work is done.** This most important feature insures every part of the steel being covered with non-rusting metal and makes our towers more rustproof than others. **Our towers are braced diagonally as well as crosswise at every corner post joint** and they are so strong and rigid that when properly anchored they cannot be blown down. No. 1 towers have one set of bands for each 10 feet of their height, also a band at the platform and two bands above the platform which serve as steps. No. 1 towers are intended for use with 6 and 8-foot windmills, but in view of the small difference in price we recommend that a No. 2 tower be used with an 8-foot windmill. Nos. 2 and 3 towers have bands 5 feet apart for the entire height of the tower, also a band at the platform and two extra bands above the platform which serve as steps. No. 2 towers are suitable for 8-foot and 10-foot windmills, but we recommend that you use a No. 3 tower for 10-foot windmills when elevated more than 40 feet. No. 3 towers are suitable for 10-foot or 12-foot windmills at any height. **Our towers are full height;** every corner post **is 10 feet 6 inches long, the extra** 6 inches being allowed for the lap of one post over the one below it. This feature makes a stronger and better finished tower and also serves to prevent water from running into the corner post joints. **Illustration shows a 40-foot No. 2 or No. 3 tower. Prices are for** towers complete with platform, ladder, rod guides, anchor posts and anchor plates and building instructions for erecting, but does not include windmill, bed plate, truing spider, pump pole, pull-out wire nor reefing gear, these being parts of the windmill. **Shipped from** in Northeastern Indiana.

Western Special Galvanized Steel Tanks

SHIPPED FROM KANSAS CITY, MO.

Highest Quality, Strongest Construction, Lowest Prices

These tanks are of the strongest possible construction and are made of the best galvanized steel the best steel mills of the country can produce. They are carefully and thoroughly made, seams made tight and smooth, riveted and soldered, and guaranteed to be absolutely waterproof. We use nothing lighter than U. S. Standard No. 20-gauge sheet steel, which is amply heavy enough to hold contents of tanks without bulging and to give years of service.

The illustration at the upper left hand corner of the page shows the way our Western Special Round and Round End Tanks are made up. The top rims are formed of a piece of steel pipe, around which the top edges of the tanks are rolled, making rounded tops, on which live stock cannot injure themselves. This construction gives great stiffness and strength to the tanks. Bottoms are securely bound with steel angles, and edges are flanged up outside between the side sheet and the angles, and then soldered and Sides are firmly braced, when size and shape require it, with angle steel bars. Round end, square end, and oval tanks 6 feet or longer el bars or braces across the top, the number of bars depending on the size of the tank.

d, round end and square end tanks are always shipped set up, unless otherwise ordered, but we can, if so ordered, ship them knocked When tanks are shipped knocked down, all holes are punched, every part is fitted at the factory, and tanks will go together easily. Suffilder and rivets are sent with knocked down tanks with which to put the tank together. Capacities shown in barrels are based on 31½ to the barrel. We can make prompt shipment of all sizes and styles. Order a tank from us and if you are not perfectly satisfied with it, do not consider it a strictly first class job in every respect, just as good a tank as you can get anywhere, return it at our expense and we urn your money and freight charges. All prices quoted on this page are for the tanks delivered on the cars at Kansas City, Mo.

Hinged Covers for Steel Tanks.

hey were square at the ends. Example: r for a round end tank 6 feet long and 2 ide would measure six times two or 12 feet, and would cost twelve times the f 1 square foot. Made of No. 20-gauge Weight, about 2 pounds per square foot. style wanted. Shipped with tanks from s City, Mo.

32A4900 Steel Cover. Price, per square 15c

Round Tanks.

Made with steel pipe around top and angle around bottom, as illustrated and described above. **Made of No. 20-gauge galvanized steel. Will make 18-gauge at prices one-fifth higher.** Al- hipped set up, but can be shipped down if so ordered. Prices are for the t Kansas City, Mo.

$8.50 Dipping Tanks.

For dipping sheep and hogs. They are placed in the ground, with the top level with the surface. Animals can then be driven in and out of the tank. **Made of No. 20-gauge galvanized steel, but can be made of No. 18-gauge at prices one-fifth higher.** The long incline of these tanks allows the animals to walk out easily on the end ladder furnished with each tank. Tanks are strongly braced. Always shipped set up from Kansas City, Mo.

Round End Wagon Tanks. $10.70

The strongest constructed wagon tanks on the market. Made of No. 20-gauge galvanized steel, but will make of No. 18-gauge at prices one-fifth higher. Tops of tanks are reinforced with a heavy angle iron placed on the inside, and the cover is riveted and soldered to the flat side of angle which extends out over the top of side. Another heavy angle is placed around bottom of tank outside. This protects bottom from injury. All tanks are well braced and have splash boards inside. All tanks are 2 feet high with water-tight top and manhole in top. Have 2-inch pipe connection in rear end. Used on any wagon by laying board on the gear. Shipped set up from Kansas City, Mo.

$20.75 Shipped from Kansas City, Mo.

THRESHERMEN'S TANKS.

Made of No. 20-gauge galvanized steel. Will make of No. 18-gauge at prices one-fifth higher. Tank is mounted on wooden frame with cross sills notched to fit bolsters. Sills can be sawed off to fit any width of truck. Iron brace at each corner extends to top of tank. The galvanized steel sides extend 6 inches above top of tank on three sides, providing a convenient place for carrying buckets and tools. Each tank has a manhole with cover in top and a 2-inch pipe connection in rear end. All sizes are 8 feet long. Price includes woodwork shown in illustration. Always shipped set up from Kansas City, Mo.

X-L-ALL SQUARE MESH FENCING — WOVEN WIRE FENCING — HARVA DIAMOND FENCI

TWENTY-SEVEN STYLES AND HEIGHTS. DIRECT FROM OUR LOOMS TO YOU AT LOWEST FACTORY PRICES

HIGHEST IN QUALITY. LOWEST IN PRICE.

That's Why We Sell More Wire Fencing Direct to the User Than Any Other Concern in the World.

ABOVE ILLUSTRATION SHOWS OUR No. 32H5211 X-L-ALL FARM FENCING.

WE GUARA

To Furnish Yo Best Made, the E Stretching, Longest Lasting Fencing You Used and to Sav Money on E Order.

YOU BUY DIRECT FROM THE MANUFACTURERS when you buy wire fencing from us and at a price which represents the actual cost to produce, with but our one profit added. We own and operate, at Knightstown, Indiana, one of the largest and most perfectly equipped fencing factories in the country. There we make every rod of fencing we sell, and we sell every rod we make direct to our hundreds of thousands of customers at lowest factory prices. We cut out the middlemen and save you the jobbers', dealers', and agents' profits, giving you the highest quality, easiest stretching, and longest lasting fencing you ever used for a less price than your dealer pays for fencing which for height, strength, style and durability cannot compare with ours. Our line of fencing is complete. We manufacture an assortment of styles and sizes, among which you cannot fail to find the exact style or height of fencing you need. Send us a trial order. Our fencing will prove to you the truth of our claims and make you one of our steady customers.

WE GUARANTEE THE QUALITY of wire used in our fencing to be the best it is possible to obtain and every wire to be full U. S. standard gauge. We do not use undersize wire. Look well to this before buying fencing. See that you get No. 9 wire when you pay for it, not No. 9½, and No. 12 when you pay for it, not No. 12½, and so on. We state in our descriptions the exact sizes of wire used and we guarantee every wire to be full size, exactly as described.

WE GUARANTEE THE GALVANIZING of our wire to be the heaviest and best. It is properly applied and will not scale off; for this reason our wire is more rustproof and will withstand the ravages of time longer than others. Do not buy a fence made of poorly galvanized wire. It will soon rust out, give the fence an unsightly appearance and prove to be a short lived though costly fence.

WE GUARANTEE PROMPT SHIPMENT. We own and operate our own wire fencing factory and aim to carry large stocks of fencing ready to ship upon a moment's notice. Since we engaged in the manufacturing of wire fencing this branch of our business has increased to such an extent as to make it necessary for us to erect new buildings and add new machinery year after year, until now our wire fencing plant is one of the largest and best equipped in the world and we are safe in saying that we are in a position to give our customers better service than ever and to favor them with more prompt shipment than any other wire fencing manufacturer in the country.

OUR BIG FENCING FACTORY AT KNIGHTSTOWN, IND.

WE GUARANTEE SAFE DELIVERY of every order you send us. If by chance your shipment should be delayed or lost by the transportation company, we will either return your money or send you another shipment of fencing without charge, whichever you choose.

HERE IS WHERE WE SAVE YOU MONEY. We make every rod of fencing we sell. We cut out the jobbers' and dealers' profits. Our prices to you represent the actual cost to produce, with but our one small profit added.

WE GUARANTEE PERFECT SATISFACTION with every rod of fencing you buy from us. We guarantee to furnish you fencing just as described in this catalog, the best it is possible to make, and to fill your order correctly and promptly and to save you money on every order you send us or you may return the fencing to us at our expense and we will return to you the money you paid us for it and freight charges.

COMPARE X-L-ALL FENCING WITH OTHER MAKES. Order a sample bale of fencing from us, at least enough to make 100 pounds in weight, so that you may obtain every advantage in freight and at the same time order a bale from some other manufacturer or dealer and then compare the two and see which pleases you best. If you are not satisfied that our fencing is the best for you to buy, that it will give you better satisfaction and that you can save money by purchasing from us, we do not ask you to keep our fencing, but to return it to us at our expense and we will return your money, with the freight charges you may have paid. You are the sole judge and if the high quality and superior construction of our fencings do not convince you that we are entitled to your fencing orders, you will not be out one cent.

THE SUPERIOR CONSTRUCTION OF X-L-ALL FENCING is shown in the accompanying illustration of our 33-inch 8-line wire X-L-ALL Fencing. In this illustration the size of wires is necessarily reduced, but the method of weaving is plainly shown. Compare our method of construction with that of any other fencing manufacturer and you will readily appreciate the truth of every claim of superiority we make for X-L-ALL Fencing.

OUR INTERLOCKED STAY is a distinctive feature of X-L-ALL Fe will be found in no other. Aside from quality of wire we use, this feature makes X-L-ALL Fencing the best and enabl produce it so economically that we can offer it at prices far lower than others are c to ask for fencing made of as heavy wires.

YOU PAY FOR NO WASTE WIRE WHEN YOU BUY X-L FENCING. Every pound of fencing is a pound of value. You will note that the stay wires are in one continuous length and interlocked with the hor line wires. This enables us to do away with ties of all kinds, thereby effecting a saving of about 2½ inches of wire at every junction of the wires. This saving amounts to from 1 to 5 pounds of wire (depending upon the style and height) in every rod of fencing and enables us to produce a fencing of just as heavy or heavier wires than others use and in every way as strong as it is possible to make a fence, but weighing from 1 to 5 pounds per rod less. You get the benefit of this saving in our low prices.

X-L-ALL FENCING IS TRULY A WOVEN WIRE FENCING and (unlike other makes) not merely a series of horizontal and vertical wires held in place by wraps, staples or other devices. It is a closely woven fabric. The intermediate line wires and stay wires are each one continuous length and interlocked so that one wire reinforces the other, making the handsomest, strongest, stiffest and most elastic wire farm fencing ever produced.

YOU CAN DO WITH FEWER POSTS because the stay wires, not the posts, support the line wires. The number of posts you will require depends upon the use to which the fencing is put, but many of our customers set their posts two rods or more apart and find them sufficient.

X-L-ALL FENCING IS HOG TIGHT because the stay wires cannot slip on the line wires, neither can the line wires move up or down on the stay wires. Animals cannot possibly work their way through the meshes if the fencing is close enough to hold them when first stretched up. Every wire stays in place just where we put it when the fencing is made.

THE STRAIN IS EVENLY DISTRIBUTED over the entire height of an X-L-ALL Fence. No matter which line wire is subjected to strain, every wire in the fence stands its share and the entire fence springs back into perfect shape when the strain is removed.

Our 33-Inch 8-Line Wire X Fencing.

NO CUT ENDS EXPOSED TO RUST. Other makes of fencing have at every junction of the st line wires, which rust quickly, giving the fence an unsightly appearance and making lived. Our interlocked stay overcomes this objectionable feature and also makes it im for moisture to accumulate at these points and cause the wires to rust out.

X-L-ALL FENCING IS EASILY REPAIRED because if a line wire wire should break thro cident it does not loosen up beyond the second wire and the fence will not sag or shape until you have had an opportunity to repair it. It is a simple matter to broken wires by splicing.

LINE WIRES ARE HEAVILY CRIMPED and provide perfectly for and contraction on account or cold. This feature, together with our interlocked stay makes X-L-ALL Fencing sa lating and gives it an elasticity so that it conforms to all kinds of ground and stre easily under all conditions. Some manufacturers subject their wire to a short bend shape crimp in order to attain this object, but this method not only weakens the cracks the galvanizing and makes the fence more susceptible to rust.

Read What Users Say About X-L-ALL Fencing:

R. F. D. No. 44, Clarksville, Mich.
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—My last shipment of X-L-ALL Fencing is at hand and all O. K. I knew it would please me before it arrived, because the 40-rod roll I purchased of you about a year ago convinced me of that. I have it along the road, in plain view. My neighbors are interested in it, and when they ask me where I got it, I tell them of Sears, Roebuck and Co. The fence and the price has a striking effect on them and they all say, "Well, that's the kind of fence to buy." I am yours truly for X-L-ALL Fence when more is needed.
Yours truly, MARION ROOT.

Elwell, Mich.
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—My X-L-ALL Fencing arrived in good order. I am well pleased with it. It is all that your catalog claims for it and more.
Yours truly, R. S. MILLER.

Zalma, Mo.
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—I have received my X-L-ALL Fencing and can say it is the best I ever saw. I have two kinds of fencing on my farm, and I like yours the best. My neighbors are all of the same opinion, and I wish that I had bought all my wire fencing from you, then I would have saved more money and would have been better satisfied. I will gladly recommend your fencing to anyone. I will need some more wire fencing soon and I am surely going to get the X-L-ALL. It is the strongest and best made fence I ever saw.
Yours truly, DOLPH RANDOLPH.

Peoria, Ill.
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—My 25 rods of X-L-ALL Fencing received today. Very satisfactory. Saved about $4.00 on it and got better wire.
Yours truly, HENRY H. ALBRECHT.

R. F. D. No. 1, Sherman, W. Va.
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—I have just finished putting up the 100 rods of X-L-ALL Fencing received from you. Made the stretch in three pulls, and two men drove the staples, all in two hours' time. This is a record breaker for building fence in West Virginia hills. I enclose another order for 60 rods.
Yours truly, W. W. BATTIN.

R. F. D. No. 2, Owaneco, Ill.
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—I feel under many obligations to you for the many bargains in woven wire fencing I have received. I do not see why all farmers don't use your fencing. It has no equal. Always have a good word for X-L-ALL Fencing and when I am in need of any more, I will most surely buy the X-L-ALL.
Yours truly, JOSEPH J. MINKS.

Forest City
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—After putting up my Fencing I am well pleased with it. only a good fence, but is much che any I can get here.
Yours truly, W. K. SE

Canda, Ill.
Sears, Roebuck and Co., Chicago, Ill.
Gentlemen:—I am much pleased shipment of X-L-ALL Fencing through in good shape and is satisfa every way.
Yours truly, MATH. ROLL

R. F. D. No. 3, Norwalk
Sears, Roebuck and Co., Chicago, Ill.

HEAVY STANDARD X-L-ALL WIRE FENCING. No. 9 — No. 12

ACTUAL SIZES OF WIRE USED IN HEAVY STANDARD X-L-ALL FENCING.

We make this fencing 26, 33, 41, 50 or 60 inches high with stays spaced 6 inches apart. 41 or 50 inches high with stays spaced 12 inches apart. The top and bottom line of all Heavy Standard X-L-ALL Fencing are made from No. 9 hard galvanized steel wire. The intermediate line wires and vertical stay wires are made from No. 12 hard galvanized steel wire. Heavy Standard X-L-ALL is the best and strongest wire fencing you can buy. The heavy wires make it extremely strong and durable. While we make lighter fencing, which will in most cases satisfactorily serve every purpose, we recommend Heavy Standard to be the best investment for strength and lasting qualities are the chief factors.

MEDIUM X-L-ALL WIRE FENCING. No. 10 — No. 13

ACTUAL SIZES OF WIRE USED IN MEDIUM X-L-ALL FENCING.

We make this fencing in 20, 26, 41 or 50-inch heights with stays spaced either 6 or 12 inches apart. The top and bottom line wires are made from No. 10 hard galvanized steel wire. The intermediate line wires and vertical stay wires are made from No. 13 hard galvanized steel wire. Medium X-L-ALL Fencing differs from corresponding heights of Heavy Standard X-L-ALL Fencing only in the size of the wires, they being one gauge lighter. Otherwise it is of exactly the same construction. It is a high grade durable fencing and we do not hesitate to recommend it for all farm purposes. Thousands of stockmen and farmers have used it exclusively for years and pronounce it perfectly satisfactory in every respect.

We recommend that you select X-L-ALL Fencing with stays spaced 6 inches apart, especially if you wish to confine sheep or hogs.
We make our fencing in bales containing 10, 20 or 40 rods.
We do not cut bales. Fencing shown on this page shipped from Kansas City, Mo.

20-Inch X-L-ALL Sheep and Hog Fencing

REDUCED TO **14 2/5** CENTS A ROD AND UP

Shipped From Kansas City, Mo.

A low sheep and hog fencing, 20 inches high and has 6 line wires. Spaces between the line wires, commencing at the bottom, are 3, 3½, 4, 4½ and 5 inches, respectively. This height of fencing is commonly used with three or four lines of barbed wire above it and a line of barbed wire at the bottom, thus making a fence 4 feet or more in height, suitable for all kinds of stock. It is also used alongside of hedges and makes a splendid low sheep fence. **Prices do not include barbed wire shown in illustration.**

No. 32A5240 20-Inch Medium X-L-ALL Fencing with stays spaced 12 inches apart. Top and bottom wires are No. 10, intermediate line and stay wires are No. 13 hard galvanized steel wire. Wt., per 100 rods, 400 lbs.

Shipped Kansas Cit

NOTICE THE SIZES OF USED IN THI CING. DO NO FUSE IT ORDINARY TRY FENCI NETTING. LAST FIVE AS LONG.

No. 11 — Actual Size of Top and Bottom Line Wires.

STAYS SPACED 6 INCHES APART

No. 14 — Actual Size of Intermediate Line and Stay Wire

While this fencing was originally designed for poultry yards, lawns, gardens, orchards, etc., its heavy wires and closely spaced line wires and stay wires make it an excellent fencing for all farm purposes, and we do not hesitate to recommend it as such. The smallest pig cannot squeeze through its meshes and its wires are heavy enough to withstand any pressure which larger stock may put upon it. While much lower in price than ordinary poultry netting, it will last at least five times as long, and it does not require either top or bottom rails to support it. The heavy top and bottom line wires are sufficient supports with posts 16 feet apart and the fence will not sag or bag.

This has proven to be the most popular fencing we ever offered, and at the many of our customers we are now making it also in 23-inch and 34-inch heights, close mesh sheep and hog fence and a stock fencing of good height which will serve farm purposes. If you are looking for a poultry fence, an orchard fence, a light stock fence, or a good all around farm fencing, we recommend the X-L-ALL Farm Fencing as the best value you can possibly obtain. We sell more of the 58-in of this fencing and recommend it as the most desirable. **Made in bales containi and 40 rods. We do not cut bales. Shipped from Kansas City, Mo.**

23-INCH X-L-ALL POULTRY AND FARM FENCING, 21 1/5 C A ROD

Has 12 line wires. Spaces between the line wires, commencing at the bottom, are 1½, 1½, 2¼, 2¼, 2¼, 2¼, 2¼, 2½, 2½, 2¾ and 3 inches, respectively. The interlocked stay wires are spaced 6 inches apart. Top and bottom line wires are made of No. 11 hard galvanized steel wire and the stay wires and intermediate line wires of No. 14 hard galvanized steel wire. This constitutes an ideal sheep and hog fencing, so closely spaced that the smallest pig cannot squeeze through its meshes and it is strong enough to stop the most vicious kind of hogs. Weight, per 100 rods, 552 pounds.

DIAMOND MESH POULTRY NETTING

While we recommend that you purchase our X-L-ALL Poultry Fencing for making poultry fences, etc., we carry a complete line of poultry netting, because there are many times when nothing else will answer your purpose. Our Diamond Mesh Poultry Netting is the highest grade poultry netting on the market. **Made from** genuine Bessemer hard steel wire and always **galvanized after weaving,** which makes it last much longer than netting galvanized before weaving, because it is much more rigid and rustproof. There are inferior grades of netting on the market made from soft steel wire, galvanized before weaving. You will find our poultry netting to be easily worth double the price of inferior grades, because it will stretch up better, last twice as long and give you better satisfaction in every way. **Our poultry netting is put up in rolls 150 feet long. We do not sell less than full rolls.** Prices below are for netting shipped from Kansas City, Mo., from which point purchaser pays the freight.

No. 32A5450 Diamond Mesh Poultry Netting, with 2-inch mesh, made from No. 19 wire. The standard size mesh most generally used. Some of our competitors sell this mesh of netting made from No. 20 wire, which is not heavy enough to be serviceable.

ARVARD DIAMOND MESH WIRE FENCING

EXCELLENT GENERAL FARM, STOCK AND HOG FENCING. Extensively used many fancy stock farms, private grounds, etc. Top and bottom wires are No. 9 hard steel wire, which is stronger and more durable than a cable made of two No. 12 or wires, such as ordinarily used by other manufacturers of this style of fencing. truss stays act as every direction, making solid and smooth every cross in the wire acts as a spiral providing elasticity as well as firmness. Line wires are heavily crimped on 4-inch centers. Crimping is done after wearing and allows for all expansion and contraction due to changes in temperature, also permits stretching the fence tightly, smoothly and evenly. If you prefer a Diamond Mesh Fence, either our Standard Harvard or our Special Harvard Fencing will give you as good or better satisfaction than any fencing of the same style you could buy elsewhere, regardless of price. Made in bales containing 5, 10, 20 and 40 rods. We do not cut bales.

SIZES OF WIRE USED IN HARVARD DIAMOND MESH FENCING.

2¢ A ROD AND UP — SPECIAL HARVARD FENCING

Made in three heights: 25 inches with 6 line wires, 40 inches with 8 line wires, 48 inches with 9 line wires. Commencing at the bottom first five line wires of the 25-inch fence are spaced about 4½ inches apart. In the 40-inch and 48-inch fence the first 6-line wires are spaced about 4½ inches apart. Remaining line wires about 9 inches apart. The double trussed stay wires are wrapped around line wires about 8 inches from center to center, making openings from 6 to 7 inches at their greatest width. Top and bottom line wires in all sizes are No. 9 hard galvanized steel wire. Intermediate line wires in the 25-inch fencing are all No. 12 galvanized steel wire; but in the height, counting from the bottom the second, fourth, sixth and seventh line wires are and the other two intermediate line wires are No. 14 galvanized steel wire. In the height the third, fifth and eighth line wires are No. 12 and the other three intermediate line wires are No. 14 galvanized steel wire. Stay wires in all heights are No. weights per 100 rods are as follows: 25-inch, 640 pounds; 40-inch, 806 pounds; 48-inch pounds. Shipped from factory at Knightstown, Ind.

ORNAMENTAL LAWN FENCING

The Most Attractive Line of Lawn Fencing Ever Offered. Designs Patented.

in other way and at no such small expense can you add so greatly to the appearance home as by putting up a neat and attractive fence. The three designs of ornamental fencing shown below are really artistic and are actual triumphs of the fence makers' art, the quality of material and workmanship is of the highest possible grade, so that any one will be an added ornament and a permanent and useful improvement for any home. **Our line of Ornamental Lawn Fencing is the handsomest, strongest and most durable on market, and our prices are at least one-third less than others ask for light, loosely woven** We use more line wires in the different heights than are found in any other makes. Cable twisted cable line wires are spaced about 6 inches apart and locked around the pickets with right and left twists, thus providing for contraction and expansion. are spaced 4 inches apart. The bow pickets overlap each other, making fence stiff and strong at top, so that it cannot be easily broken down. Every order is specially woven in the exact lengths ordered, and the end pickets finished off square, leaving no cut or ragged ends. Sometimes during the rush season it may require from three to five days to turn out an order, but you will be amply repaid for waiting a few days by receiving bright, brand new fencing fresh from the looms. We guarantee our fencing to be made of the full size gauges of wire specified and to be made of the very best wire obtainable, heavily galvanized and as rust-proof as it is possible to make. Any of this fencing can be put up on either wood or iron posts and makes a strong, solid fence, but we recommend that you use our ornamental steel fence posts shown on this page, as they are the easiest to set and will make the most durable and lasting fence and the cheapest in the end. All ornamental lawn fencing excepting our Windsor design will be shipped from the factory in Eastern Indiana.

PRINCETON LAWN FENCING.

and strongest design. Double twisted line wires No. 12½ heavily galvanized Bessemer steel wires and left twists locking pickets. Continuous bow also intermediate upright pickets are made of two galvanized steel wires twisted and formed under Fabric is closely woven and poultry proof. This is most artistic designs ever produced and will add to and beauty of any home.

No. 32H5367 Princeton Lawn Fencing.

Standard No. 2 Farm and Driveway Gates.

The strongest and best gate on the market for the money. Frames are made of steel tubing 1⅝-inch outside diameter, and nicely painted. Each gate has a center brace of 1⅛-inch outside diameter steel tubing, which is firmly secured to the frame with malleable clamps. Each gate has also a ⅝-inch diagonal brace rod which prevents sagging. The filling or fabric is heavy galvanized square mesh farm fencing with stays spaced 6 inches apart. The spaces between line wires vary from 3 inches at the bottom to 7 inches at the top, making it practically poultry proof as well as hog tight. Good hinges and a positive automatic latch are furnished with each gate. Posts should be set 4 inches wider than gate to allow for hinges and latch. **All sizes are 4½ feet high.** Shipped from factory at Knightstown, Ind.

X-L-ALL = ADJUSTABLE FENCE POST BRACE

The only practical fence post brace on the market to keep your fence in permanent good shape. It is adjustable and the tension on fence can be regulated at any time to care of expansion and contraction caused by hot and cold weather. You can quickly tighten up a loose, bagged fence which otherwise might soon be broken down and ruined, at a great loss of time and money. Can be attached in ten minutes, without digging necessary. You can use lighter corner posts and fewer line posts. **Adjustable to any height or kind of post,** round or square, wood or cement. Straightens up leaning posts and holds them straight against any tension. Made entirely of steel and iron and will last indefinitely. Brace consists of a heavy steel pipe, a long threaded nipple with adjusting nut, a foot plate, post casting and a galvanized steel cable bracing bottom of post and equalizing the strain. Made in three sizes: No. 5 with pipe 1¼ inches diameter, 5 feet 6 inches, suitable for a 40-rod stretch of fence; No. 7 with pipe 1½ inches diameter, 7 feet long, suitable for 100-rod stretch of fence; No. 9 with pipe 2 inches diameter, 8 feet 6 inches long, suitable for a 300-rod stretch of fence. Order one brace for each line, end or gate post; two braces for corner post. Shipped from factory in Northeastern Indiana.

Weight, pounds	22	30
Price, each	$1.35	$1.55

Ornamental Single Driveway Gates.

Regularly furnished with galvanized fabric to match our Princeton Lawn fencing, but will furnish to match our Cambridge or Oxford Lawn Fencing if so ordered. Frames are made of 1⅛-inch outside diameter steel tubing, nicely painted. The 8-foot gate has one and the 10-foot and 12-foot gates have two ⅞-inch steel upright braces clamped to the frame. Hinges and latch for wood posts or for 1⅝-inch diameter tubular steel posts furnished with each gate. **When ordering, state which is wanted. A special feature of these gates is that the fabric is woven in a special panel to fit the gate,** the end pickets being finished off square. Gates 8 feet wide weigh from 55 to 72 pounds; 10-foot gates, from 65 to 80 pounds; 12-foot gates, from 78 to 95 pounds. Prices do not include posts. Shipped from factory in Eastern Indiana.

Champion Combined Fence Stretcher Wagon Jack, $4.60.

The most powerful made. The easiest and simplest to operate. One operating the lever back and forth can accomplish more than two men with the ordinary stretcher. Stretches fence within a foot of post, and by setting the end of the ratchet bar against the end post it enables to stretch past it and setting an anchor post. Made entirely of iron and steel. Ratchet bar is 4½ feet long. Price is for stretcher complete with anchor chain and 63-inch hardwood clamps with bolts. Can also be used as wagon jack, post puller, pump lifter and for numerous farm purposes. Shipped from Kansas City, Mo.

No. 32A5384 Champion Fence Stretcher. Weight, pounds. Price.....

INDESTRUCTIBLE STEEL FENCE POSTS.

Line posts consist of rigid angle steel uprights in which holes are drilled at proper distances to suit all kinds of wire fencing, the fencing to be fastened with tie wires. Corner and end posts are not drilled, wires should be wrapped around them. Can be set in a concrete base, as shown in the illustration to the left, or if posts are wanted to drive we **will furnish them pointed at an extra charge of 1½ cents per post.** Many form a concrete base by setting the post in the hole and pouring wet concrete around it. Height of posts given below is the height above the base or ground. Line posts are 20 inches longer and corner and end posts 32 inches longer than the heights we name. **Prices do not include concrete bases.** With home made wooden or metal molds you can make these for much less than what you would pay for freight on them. Full directions for setting posts and for making concrete bases sent with each shipment. Inasmuch as these posts are practically made to order, during the busy season it is sometimes impossible to make them as fast as our orders are received and there may be a slight delay of from 5 to 10 days in filling your order. We mention this so you may place your order slightly in advance of your requirements. Shipped from factory near Chicago.

X-L-ALL Tackle Block Fence Stretcher and Safety Hoist.

A combination fence stretcher and self locking tackle block or safety hoist. Can be used by hand or power and holds at any point without slipping. Every pound pulled on the rope equals four pounds on the wire. Consists of two heavy 63-inch hardwood clamps with bolts of broad steel clevises with chains and a pair of double tackle blocks, one fitted with safety clevis to grip and hold rope when the pull is stopped. Blocks are made for 5/8-inch rope. Rope is not furnished. When used as a safety hoist with ¾-inch manila rope, one man can easily raise 500 pounds or a team 2½ tons and hold the load wherever it is raised. Shipped from Kansas City, Mo.

PRICES REDUCED

HIGH QUALITY BARBED WIRE.

OUR BARBED WIRE is the best on the market. Barbs are sharp pointed and double twisted around the main wire, and spaced with greater uniformity than will be found in the lower grades of barbed wire. Our galvanized wire is **thoroughly galvanized** and is as rustproof as it is possible to make it. We furnish only two-point barbs, which make a neater fence than a four-point barb; it is easier to handle and serves every purpose just as well. **Hog wire** has barbs about 3 inches apart; **cattle wire** has barbs about 5 inches apart. Evenly and compactly wound on good substantial reels and will be found much easier to handle than the wire you ordinarily buy.

Standard Barbed Wire.

Cables are No. 12 wire, barbs are of No. 14 wire. The 100-pound spools contain from 90 to 100 rods of wire. The 80-rod spools contain 80 rods of perfect wire and weigh about 78 pounds. We sell full reels only. Shipped from factory in Central Indiana.

No. 32A5400 Painted Hog Wire. Price, per 100-pound spool.....$1.98

Per 100-pound spool..... 2.28

Special Barbed Wire.

We recommend the purchase of this wire because in nearly every instance it will serve your purpose fully as well as heavier wire and in many instances much better. Has two cable wires made of 14-gauge wire, and barbs made of No. 15-gauge wire. This wire is easier to handle than heavier wire; it is also more elastic and will yield quicker to pressure. For this reason it is really less dangerous to stock. **Put up on spools containing exactly 80 rods.** We guarantee each spool to contain this amount of perfect wire. Full spools weigh about 57 pounds each. Shipped from factory in Central Indiana.

No. 32A5410 Painted Special Cattle Wire. Price, per spool.....$1.40

No. 32A5411 Galvanized Special Cattle Wire. Price, per spool..... 1.55

BEE HIVES AND BEE KEEPERS' SUPPLIES

LOWEST PRICES.

You cannot buy better bee hives and bee keepers' supplies, than ours at any price. We guarantee our goods to be the very highest quality, and if for any reason you should feel dissatisfied with the construction or the quality of any bee keepers' supplies purchased from us, you may return them at our expense and we will immediately return your money and freight charges. Our hives are made to absolutely accurate measurements and standards, and the supers, bodies, frames and other parts will interchange with any other make of hives of the same style.

We have brought together on this page and put at the command of every bee keeper the resources of two of the largest and most reputable manufacturers in the country, thus making up the best and most complete line of high quality bee keepers' supplies on the market and giving a far better and larger list to select from than any other one dealer, jobber or manufacturer can offer.

Five Complete 1½-Story Hives Crated for Shipment.

WHITE PINE HIVES are preferred by most bee keepers to hives of any other material, because white pine, being an easy lumber to work, it is possible to obtain a better and more uniform finish than with any other hive lumber. It is also closer and clearer grained, and when the lumber is selected and properly handled, white pine hives are unquestionably superior to those made of any other material. The most particular fancy bee keepers will be satisfied with our white pine hives. We guarantee them to be the best finished and most perfectly made hives on the market.

YELLOW CYPRESS as a hive material has been coming into general use in recent years, and while not permitting such a high finish as white pine, it is, from the standpoint of utility, a perfectly satisfactory hive lumber. Where hives are used without painting it will stand moisture and weather better than any other lumber. Good cypress being more plentiful than a suitable quality of white pine, it is also cheaper. Bees will work in it as readily as in pine hives. Our cypress hives are made from the best grade of smooth dressed yellow cypress lumber and we guarantee them to give perfect satisfaction.

Hives are generally used 1½ stories high, that is with brood or bottom hive, and one super or top hive, but by ordering extra supers you can make two stories or more. Generally hives of five, ten, etc., but we list single hives so that you can order any quantity. They are always shipped partly knocked down, and are not painted. Bee hives, extractors, and supplies when ordered with them are always shipped direct from factories, but we carry a large stock of sections, frames and smaller supplies at our Chicago store, and will ship them when ordered with other merchandise or when to purchaser's advantage.

Cypress hives are shipped from factory in Southeastern Wisconsin. Cypress hives and all Massie hives from factory in Western Iowa.

MASSIE PATENT DOUBLE WALLED HIVES.

Complete with Sections and Starters.

The Massie is a double walled, double cover, divisible, alternating hive, and possesses numerous advantages over all others. It excels the chaff hive because there are no open spaces between and behind open end frames to be warmed by the bees and it is also of lighter weight. With a Massie hive for winter quarters you will avoid the loss of many bees and find a greater number of young bees early in the spring. The queen enlarges the brood nest more rapidly and brood rearing continues without interruption. When the honey season arrives the Massie will be full of bees ready to work, while the colonies in other hives are just in good breeding condition. The cover is formed of a sheet of heavy galvanized steel, fastened to 2-inch dovetailed wood sides which fit down over the super. Inside top of cover is lined with strawboard held in place by wood cleats. Inside this is an inner wooden cover or escape board with space in center to receive a Porter bee escape. The super is 5⅝ inches deep and has thirty-two 4x5x1⅜-inch plain sections with foundation starters, eight section supporting slats, nine cleated fence separators and two flat steel spring clamps to hold sections securely together, leaving no space between for deposit of bee glue. The brood chamber is 7½ inches deep, has nine frames 15⅝ inches long and 7¼ inches deep, close fitting their entire height. These frames are hung in the hive by rivets on the end of each. Bees are excluded from the frame rests by removable wedges which also lock the frames, permitting the brood chamber to be inverted. When in place the ends of frames form solid inner end walls with air space between them and the hive ends. The frames may be handled singly or in pairs or more at once. A movable division board at each side of frames constitutes inner side walls with an air space between them and the hive sides. Two flat spring steel clamps lock frames and division boards securely together. The top bars of frames have grooves with wedges for holding foundation starters. Hives can be enlarged to 2 or 2½ stories by ordering extra brood chambers. The brood chambers can also be used as supers for extracted honey. The bottom is ⅞-inch thick, secured between interchangeable grooved side rails. The rear end of the floor is covered with a wire screen, with a removable slide over it which can be moved back to afford ventilation without disturbing the bees. This slide is grooved on one side and can be used as a feeder, as well as a cover for the ventilator. A reversible entrance block regulates depth and size of entrance or closes it entirely. Shipped from factory in Western Iowa.

PRICES MASSIE CYPRESS HIVES.

No. 32H3585a Crate of five 1½-story 9-frame Cypress Hives. Wt., 155 lbs....$8.98

Dandy Bee Smoker.

A splendid smoker for the money. Has straight nozzle, tin fire chamber; 2¾ inches in diameter. Gives good satisfaction when one has but a few colonies of bees.

No. 32H3540 Dandy Bee Smoker. Wt., 1 lb. Price.....54c

Champion Bee Smoker.

The best smoker on the market, convenient and serviceable. Has 3½-inch lined fire chamber made of heavy tin, beaded. Nozzle is hinged to top of bellows. The air passage between the bellows and the fire chamber compels all the air from the bellows to be forced through the fuel.

No. 32H3541 Champion Bee Smoker. Wt., 1¼ lbs. Price.....73c

Globe Bee Veil With Springs.

Made of French cotton tulle with silk face piece. Five spring steel bars keep the veil away from the face and neck. These bars button to studs on the neckband of the veil.

No. 32H3544 Globe Bee Veil. Wt., 5 oz. Price.....92c

La Reese Bee Escape.

Can be placed under hive supers which are crowded without smothering the bees. The hum of the bees below induces the upper bees to descend through wire cones in less time than with any other escape.

No. 32H3553 La Reese Bee Escape. Wt., 1½ lbs. Price.....32c

Porter Bee Escape.

To be placed in the center of a honey board and saves the work and worry of smoking and brushing bees out of supers. Place the escape in a board and slip between super and hive and the next morning your bees are out of the super.

No. 32H3558 Porter Bee Escape. Wt., 3 oz. Price.....18c

Bee Brush.

Strongly made with soft pliable fibers, secured in a wood handle, long enough to reach across an ordinary frame.

No. 32H3565 Bee Brush. Wt., 4 oz. Price.....17c

Rubber Bee Gloves.

The best and most durable bee glove made. The rubber coating is applied to a thin elastic material. Seams are sewed and overcast like a kid glove. No glued seams to come apart. Have long gauntlet sleeves with elastic bands to prevent bees from crawling in.

No. 32H3843 Bee Gloves. Wt., 6 oz. Price, per pair.....$1.13

1911 Model Improved Cowan Honey Extractors.

New improvements, consisting of ball bearings at top and bottom shafts upon which the inside mechanism revolves, and improved pocket hinges make them easier running and more durable than ever. Strongly made of galvanized steel, with conical bottom and supplied with anchor rods. The comb pockets are hinged inside of a pair of hoops. Combs are put into these pockets (after uncapping), the honey extracted from one side by a few turns of the crank, and then without touching the comb the pocket is swung around and a few more turns of the crank extract the other side. Intended for extracting from frames, but pockets are 2¼ inches wide, so that honey can be extracted from partly filled sections by placing them in a wide frame. Shipped from factory in Western Iowa.

No. 32H3575 Improved No. 15 Cowan Honey Extractor. Comb pockets, 9¾ inches; can be 20 inches in diameter, 29 inches high. Wt., 70 lbs. Price.....$10.62
No. 32H3576 Improved No. 18 Cowan Honey Extractor, for frames not over 18 inches deep. Can be 24 inches in diameter and 29 inches high. Wt., 120 lbs. Price.....$12.45

We can furnish nearly everything used by bee keepers. If this page does not show what you want, send for our Special Catalog of Bee Keepers' Supplies, which shows other styles of hives and many other articles not shown on this page.

ATLAS PLATFORM SCALES

This is positively the best portable platform scale you can secure at any price. It is guaranteed accurate in weighing, perfect in material and workmanship and equal in material, finish and sensitiveness to any scale sold at twice the price. Don't judge the quality or the accuracy of the Atlas Scale by the low price we quote on it, because you find that practically every other scale on the market that is constructed like the Atlas is advertised at a price which will range from $5.00 to $20.00 more than our price. If you want the best portable scale you can buy and want to save money, buy the Atlas. You will not be disappointed in it. So sure are we of this we will ship you the scale with the understanding that you can return it if you are not satisfied, even after comparing it with any higher priced scale on the market, and we will send back to you every cent you paid for the scale and for freight charges on it.

CONSTRUCTION. **All castings are of the best grade gray iron. Base and platform** are extra heavy to stand severe usage. **Platform center, pillar and pillar cap** are No. 1 grade maple thoroughly seasoned. **Levers** are heavy castings, well braced, and, barring accident, will never break. **Bearing pivots** throughout are of the best grade tool steel accurately ground to a knife edge, insuring sensitiveness such as is found only in scales of other makes sold at twice our price. **Bearings** on platform are of hardened steel and platform is fitted with check pin to prevent raising when load is let down on edge of platform. **Corner loops** supporting levers are fitted with hardened self adjusting bearing plates. **Weigh beam** is of solid brass, not brass plated iron commonly used, and is accurately graduated and adjusted to U. S. standard weights. We can furnish either single or double beam styles at prices quoted below. Beams on 600, 800 and 1,000-pound scales are graduated to 50 pounds by ¼-pound marks. On larger sizes beams are graduated to 100 pounds by ½-pound marks. Scale is mounted on wheels held to base by steel axles running clear across instead of on small castings generally used. **Finish.** All iron parts are nicely finished in a gloss black. Wood parts are painted a handsome Prussian blue with gold striping, and varnished two coats with best quality of varnish. Brass beam is highly polished. The Atlas Portable Platform Scale will weigh absolutely correct on all parts of the platform.

BAG RACK ATTACHMENT **consisting of iron pipe frame fitted with a device which will hold bag upright and open, and which is adjustable in height,** can be furnished at $1.85 extra. If you want this attachment order No. 11H7053 and allow $1.85 in addition to price of scale. All Atlas Scales are taken apart and boxed for shipment in order to reduce the freight charges. We furnish complete simple directions for assembling each scale so anyone can set it up. Shipped direct from factory in Southern Michigan.

PRICES, SINGLE BEAM SCALES

If you want scale with double beam order from double beam list.

HARVARD PLATFORM SCALES

We make this scale in 600 and 1,000-pound capacities only, and while it is a first class scale in every respect, it is not built so well nor finished as nicely as the Atlas Scale described above. The Harvard Scale is gotten up to compete with scales sold by others at $7.50 to $10.00, and while we guarantee it to weigh absolutely correct on all weights up to its capacity and to be perfect in material and workmanship, we do not recommend its purchase for use where considerable weighing is done. For those who only have occasional use for a scale it will give satisfactory service. The Harvard Scale is without question the best value ever offered. It is similar in appearance to the Atlas, but is not so highly finished. Beam is single bar polished steel graduated to 50 pounds by ¼-pound marks. **Bearing** pivots are steel nicely ground and adjusted; base, levers and other castings are good quality gray iron nicely finished in black, and woodwork is clear hardwood, nicely finished in blue and well varnished. Each scale is sealed to U. S. Standard weights and guaranteed to be perfect and accurate. Shipped direct from factory in Southern Michigan.

Catalog No.	Capacity	Size of Platform, Inches	Shipping Weight	Price
11H7005	600 pounds	15x22	135 pounds	$6.29
11H7006	1,000 pounds	16x24	140 pounds	7.45

NEW CENTURY PLATFORM SCALES

This is a medium grade scale which we recommend to those who do not wish to in our Atlas Scale, although the Atlas Scale is positively **the best scale** to buy compare favorably with any portable scale on the market. Our New Century better than the Harvard Scale and is similar in construction to the Atlas, exc it is not so finely finished and does not contain the same grade of material. Y Century Scale is fully guaranteed to give accurate weight on all weights up to its c but it will not stand as hard service as the Atlas. All castings are of a good gra iron, all pivots and bearings are hardened steel, wood parts are selected maple, an is solid brass accurately marked to 50 pounds by ¼-pound marks. Iron p scale are finished in black, woodwork in blue with gold striping, and all is nicely v and well packed for shipment. We guarantee the New Century Scale to be pe material and workmanship, and will replace any parts proving defective, free of ch the purchaser. Full directions for assembling and adjusting packed with each Shipped from factory in Southern Michigan.

11H7012	1,000 pounds	17½x25	158 pounds

HERCULES PITLESS WAGON SCALE

PERFECT TRUE WEIGHT

$37.95

5-TON

This Pitless Wagon Scale has a platform 8x14 feet in size, 12 inches above ground, and is suitable for general farm use, equal to many pitless scales sold by others at $50.00 to $60.00. While the Hercules Scale is a high grade accurate and durable scale, we want to especially call your attention to the Atlas All Steel Pitless Scale shown on page 1127, which is positively the best pitless scale ever offered at any price, and if you have considerable weighing to do and want a pitless scale we would advise you to get the All Steel Atlas Pitless Scale.

CONSTRUCTION OF THE HERCULES SCALE **is first class throughout. Levers** are of T shape steel bars, the long ones being trussed to brace and stiffen them. **Bearing pivots** are of tempered tool steel ground to a sharp bearing edge to insure accuracy. **Beam** is solid brass accurately marked to 1,000 pounds by 5-pound marks on upper bar and to 9,000 pounds by 500-pound notches on the lower bar, giving you the full capacity on the beam without the use of loose weights, which are liable to become unsealed, lost or stolen. Platform is supported on beam box side by a steel I beam furnished with scale. Opposite side of platform is supported by 6x8-inch wood stringer, furnished by purchaser. **End sills** are of 3x12-inch lumber, furnished by purchaser. These are tied together by steel pipe connection and special brackets which we furnish. **Beam box** is full size, made up of matched lumber and well painted. **Easy to set up.** The building directions furnished with this scale are so simple and plain that anyone can set up the Hercules Scale even though they have never done any work of this kind before.

FULLY GUARANTEED **to be perfect in material and workmanship,** and we agree to replace any part giving out by reason of defect in material or workmanship, free of charge to the purchaser. If you are not perfectly satisfied with the Hercules Scale you can return it at our expense and we will send back every cent of your money, including the freight charges you may have paid. Shipped direct from factory in Southern Michigan.

No. 11H7096 Hercules Standard Pitless Wagon Scale. Capacity, 5 tons, size of platform, 8x14 feet. Shipping weight, 675 pounds. Price..... **$37.95**

NEW CENTURY PIT WAGON SCALES

ACCURATE SENSITIVE

The illustration shows scale with platform removed and beam box opening on p side. In use, however, the opening is on opposite side. This scale is constructed the requirements of those who want a medium priced scale which can be depende for accurate weight and good service for general farm use. The New Century Scale built so heavy or so nicely finished as our Atlas Wagon Scale shown on page 1127, is the scale we advise you to buy if you want a scale for heavy continual use. we guarantee the New Century Scale to give satisfaction for general use, and you that it will compare favorably with scales usually sold at $15.00 to $25.00 more than

THE CONSTRUCTION **of the New Century Pit Scales is similar to the** but the material is not quite so heavy and it is finely finished. **Beam** is solid brass, accurately marked to 1,000 pounds by 5-pound on the upper bar and to 9,000 pounds by 500-pound notches on the lower bar. **capacity** is shown on the beam, so no loose weights which are liable to get lost or are required. **Levers** are rolled steel bars T shape, long levers being trussed. All **pivots** are of tool steel accurately fitted and ground. **Beam box** is full size, well matched lumber, fitted with good lock and key, and is well painted. **Pit** required scale is only 22 inches deep from level on which platform is to be located. Most require 30-inch pit.

GUARANTEE. **The New Century Pit Scale is guaranteed to be perfect in and workmanship,** and any part giving out on this account replaced free of charge. We also guarantee each scale to weigh absolutely correct weights up to its full capacity. Remember, however, for heavy continual use the purchase of the Atlas Scale, which is the best scale you can get at any price scales shipped knocked down from our factory in Southern Michigan. **Simple directions** furnished with each scale so anyone who can handle saw or hammer can up without previous experience. We advise the purchase of the 5-ton size, No. 11 as this is the size most commonly used, and it enables you to do weighing which would not be able to do with a lighter scale.

TLAS PIT STOCK AND WAGON SCALE

tration shows scale with portion of founda- and platform removed and beam box with ing on platform side. When in use, beam opening is on opposite side. Space between form and beam box is 2 feet.

Fully Guaranteed, Accurate, Sensitive, Perfect

35.95

T WAGON SCALE is so called because it is necessary to dig a pit in which a foundation is constructed on which to hang the scales, being on the same level as the surrounding ground.

ATLAS SCALE requires a pit but 22 inches deep and is very regular in shape, making it very easy to build. Most other pit scales require 24 to 36 inches deep and irregular in shape, which means more expense in labor to construct.

S SCALES ARE ADAPTED for coal yards, grain elevators, public weighing and general farm use where the best is desired. Don't judge the quality of our Atlas Scales by the price, because our below the prices asked by others for this grade of scale. Bear in mind that we scales at prices based on actual factory cost, with but our one profit added, and not compelled to pay three to five fancy profits on a scale, as would be the case if bought it in the usual manner.

ANTEE. Atlas Scales are guaranteed to give accurate weight on all weights up to their full capacity, to be perfect in material and workmanship and to perfect satisfaction in every respect. If you are not satisfied you may return the our expense and we will return your money, together with any freight charges you will not be out one penny if you decide not to keep the scale. We agree to any piece or part which breaks on account of defect in material or workmanship free to the purchaser.

WEIGH BEAM IS SOLID BRASS, not brass plated or brass faced, as is used by a great many scale manufacturers. The full capacity of the scale is on the beam, which has three accurate plainly bars; thus no loose weights are required, the top bar of the beam, which is marked to pounds by 10-pound marks, is used to get the weight of the empty wagon, stock rack other container used. The sliding poise on the top bar is fitted with set screw for the poise in position. The net weight of the load can then be obtained by the reading middle and lower bars. The lower bar is graduated to 500 pounds by 2½-pound marks. of the capacity of the scale on scales up to 5 tons capacity is shown on the which is marked by 500-pound notches. On 6 and 8-ton scales the middle bar is 8,000 pounds, the balance of capacity being obtained by a special sealed jug weight.

BEAM is fitted with balance ball for balancing the scale when necessary to overcome the weight of ice, snow, dirt or rain on the platform. We also counterpoise to be used when sealing the scale. Beam Box is well made of selected and painted inside and out with the best lead and oil paint. Door is strongly built and fitted with a flat key lock, so outsiders cannot get at the beam and tamper with it. Beam box measures 58 inches high, 45 inches wide and 9 inches deep.

THE LEVERS of our Atlas Scale are constructed of T shaped rolled steel bars, which are stronger and more durable than the cast iron levers used by so many manufacturers. All levers are trussed with heavy round steel rods, making them perfectly rigid under the most severe strain. The tension of the truss rods is adjustable by means of right and left hand nuts. Truss posts, lever heads which carry the pivots by which the levers are suspended, and the pivots upon which the platform bearings rest, are firmly secured to the ends of the levers by bolts and rivets.

THE PIVOTS are of highly tempered square tool steel, and bearing points are ground to a knife edge, which insures sensitiveness and accuracy in weight. The bearing pivots are securely mounted in heavy castings. The lever and beam rod connections are square in shape and roomy, and the cone bearings are carefully hardened. All this goes to make the scale sensitive in action, which means accurate weight.

ALL WORKING PARTS in the pit are hung from the four corners by heavy loops and hangers with knife edge bearings. This provides a flexible, free acting suspension, another feature which aids in giving accurate weight. This method of suspension is far superior to the method in use by many others in which scale is supported on posts or piers which are not flexible, making a stiff working scale.

PLAIN AND SIMPLE INSTRUCTIONS are sent with each scale so you will have no trouble in erecting it. The plans show shape and measurements of all the timbers and lumber needed, and there is no possible chance of erecting the scale wrong if the instructions are followed. Any one who can handle a hammer and saw can do the work without previous experience. This scale is shipped knocked down from Southern Michigan, from which point purchaser pays the freight. Small parts are securely boxed and the beam box is crated. We do not furnish timbers or planks with this scale.

PRICE LIST.

TLAS PITLESS STOCK AND WAGON SCALE

L STEEL CONSTRUCTION, NO PIT REQUIRED, NLY 10 INCHES HIGH

Note the Simple Direct Lever Connections and Absence of Complicated Rocker Levers Which Bind Easily and Cause Trouble.

7.90

TLESS SCALE is so called because it sets on top of the ground and does not require a pit, as is the case with a pit We recommend the Atlas Pitless Scale to you as being the best scale now on the market. It is constructed throughout of steel and castings and, although only 10 inches to platform level, we guarantee work freely and to give absolutely correct weight and good service.

ATLAS PITLESS SCALE is of the same high grade construction as our Atlas Pit Scale described and the remarks made in reference to quality of material, guarantee, accuracy, etc., apply to this Pitless Scale as well as the Pit Scale.

BEAM is made of the best quality brass, highly polished and accurately marked. The total capacity of the scale is shown beam, so no loose weights, which are liable to become stolen or are required. The upper bar of the beam is graduated up to 2,000 by 10-pound marks; the lower bar is graduated to 500 pounds by and marks; the middle bar is graduated to 8,000 pounds by 500- notches. The beam is equipped with tempered tool steel pivots, ground. The sliding poises are brass faced. Beam is furnished balance ball and counterpoise, so scale can be quickly balanced when to overcome the weight of snow, ice, dirt, rain, etc., on the platform.

BEAM BOX is of selected lumber and is finished inside and out with best quality lead and oil paint. The box is provided with a good lock and key, so that the beam cannot be tampered the scale used by outsiders.

FRAME of the scale is formed of two heavy channel irons for each end, firmly connected by heavy pipe connections and special brackets.

PLATFORM is supported by heavy steel I beams, which are tied together with heavy pipe connections and locknuts. I beams are fitted with hardened bearing feet; platform measures and is but 10 inches above ground.

LEVERS are each constructed of one piece of heavy T shape steel and the long levers are strongly trussed by a heavy flat turned edgewise to obtain the greatest strength. The short levers are made heavy so no truss is required. Look out for scales with cast iron levers which are liable to break just when needed the most. The lever heads, the lever nose irons and the truss posts are strongly secured to the levers by bolts and rivets.

THE BEARING PIVOTS for the levers are of square tool steel, tempered and hardened and are ground sharp, making a sensitive and durable bearing point which will remain accurate indefinitely. All lever connections are extra heavy and roomy, so free motion, insuring a sensitive scale, is assured. Cone bearings of hardened tool steel are used in all lever connections.

THE CORNER PIVOT LOOPS, by which the head ends of the levers are suspended from the corners of the scale frame, are very heavy and strong and the bearings of these loops are carefully hardened, making a perfect frictionless surface where the knife edge lever pivots have their bearings.

ALL WORKING PARTS under the platform are suspended from the corners by heavy loops with knife edge bearings. This method insures more freedom of motion and consequently a more sensitive and accurate weighing machine than the method of supporting levers on posts or chairs which have no flexibility.

GUARANTEED ACCURATE. Our Atlas Pitless Scale is guaranteed to weigh absolutely correct on all weights up to its full capacity. Each scale is tested and sealed to U. S. standard weights, the accuracy of which has been established by the U. S. government. If you are not perfectly satisfied you may return the scale at our expense and we will return the price you paid for it, together with any freight charges you paid.

WE FURNISH EVERYTHING COMPLETE except the lumber for platform and nails for assembling it.

ANYONE CAN SET UP OUR SCALES. We furnish complete simple directions, so you can set up the scale yourself, even if you never before had experience in this line. Anyone who can handle a hammer and saw can do the work.

Scale is shipped knocked down and securely packed from our factory in Southern Michigan. Small parts are securely boxed and the beam box is crated. We do not furnish timbers or platform planks.

SEALED TEST WEIGHT.

Our U. S. Standard 50-Pound Test Weight is guaranteed correct and can be used to test the accuracy of any platform or wagon scale. Every owner of a scale should have one. Shipped from the scale factory in Southeastern Michigan.

$1.65 SCHOOL DESKS $1

For No. 5 or No. 6

For No. 3

SCHOOL DIRECTORS, COUNTY COMMISSIONERS, SCHOOL BOARD COMMITTEES, TEACHERS, everyone having anything to do with the buying of school furniture, note our new school furniture proposition. See the astonishing prices we quote, very much less than this line of goods has ever before been offered.

OUR SIMPLEX SCHOOL DESK,

illustration of which is here shown, is the best school desk manufactured at any price. It is the acme of school desk building, excelling in simplicity of construction, quality of materials, beauty of outline, ease of operation, noiselessness and durability any school desk ever before manufactured. Our whole aim in building this desk has been to reduce the number of parts to the minimum, thus reducing first, the cost secondly, **the liability to get out of order.** We have succeeded in reducing the price to a never before attained, and so simple and wonderful is the construction of the Simplex Desk that it is absolutely impossible for it to come apart or get loose and noisy, no how long it is used.

GENERAL DESIGN.

No desk was ever placed in a schoolroom which is more beautiful in appearance the Simplex. While striving for the beautiful, however, we have kept constantly in min needs and the comfort of the growing child. In graceful contour of the back and se offer a desk conforming to the natural lines of the body, the most comfortable school sea devised. The castings are in attractive patterns and the writing surface is at the proper and slightly tilted at the approved angle.

SEAT HINGE THE VITAL POINT IN A SCHOOL DESK.

We have produced a hinge which is absolutely free from complicated parts, thus nating the possibility of breakage, wear and noise making. We have but one det part in the hinge of the Simplex seat, the buffer spring. It will wear a lifetime and st as good as new. The spring is tempered by a special process and is so surrounded and tected by other parts that it cannot be str weakened, broken or gotten out of place by sort of usage. This arrangement of the makes the movement of the seat the easiest most noiseless of any school desk on the m The Simplex hinge is, in fact, frictionless, nois and as near perfection as human skill can duce it.

THE CASTINGS.

The castings used on the Simplex Desk ar tractive in design and finish. They are made the greatest care, using only the best grad new iron. No old or scrap iron is used, accounts for their remarkable toughness and ticity. The half rounded shape is a feature gives our castings great strength. The finish is two-coat japan, oughly baked, insuring a smooth, glossy, permanent finish.

THE WOODS.

All the wood used in the Simplex School Desk is selected maple, thoroughly seasoned and kiln dried. Under no circumst do we permit the use of wood which has not been as thoro dried as the most modern woodworking methods require. pieces comprising seat, back and top are carefully milled, to and grooved, glued under pressure, and then so thoroughly that the joints are practically unnoticeable and will not apart. In finishing we use the best three-coat work—one co heavy filler well rubbed in, one coat of the best shellac sanded, and a heavy coat of varnish, which guarantees a hand and lasting finish. Seat, back and top are attached to the framework by means of lugs, ribs and screws—a method of struction which has stood the test of time, and which, th simple, gives the strongest desk it is possible to devise.

Ink wells are not furnished with the No. 5 and No. 6 desks

Reduced Prices.

Prices shown below apply on orders for less than 50 desks.

On orders for 50 to 200 desks, deduct 5 cents per desk from prices below.

On orders of 200 desks and over, deduct 10 cents per desk from prices below.

THE DESK SHOWN ON THIS PAGE IS ONLY ONE OF THE MANY DESKS THAT WE MANUFACTURE. IF THIS IS NOT THE DESK YOU WANT, ASK FOR OUR SCHOOL FURNITURE CATALOG.

CATALOG No. 62A11.

This wonderful desk offer is only a sample of what we will save you throughout our entire line of school furniture and supplies.

BINDING GUARANTEE

WE GUARANTEE THE WORKMANSHIP ON OUR DESKS TO BE FIRST CLASS IN EVERY RESPECT, AND THE MATERIALS TO BE THE BEST THAT CAN BE PRODUCED; AND IF NOT SATISFACTORY THEY MAY BE RETURNED AT OUR EXPENSE.

Prices quoted below are F. O. B. Kansas City, Mo. All orders for these desks should be mailed to our Chicago house. THE USE OF THE ECONOMY CHIEF HAS SPREAD LIKE A PRAIRIE FIRE

ess Than Eight Years 290,000 Have Been Sold. **Today it outsells all the widely advertised makes** and its sales are rapidly approaching those of all others combined. Once started eighborhood it becomes **the separator** of that neighborhood. The sale of other makes soon ceases and in time, as old machines way to the Economy Chief, we have a Chief neighborhood exclusively.

y Is This? The Reason Is Plain. **It is the best cream separator money can buy.** Skims closer, runs easier, cleans quicker and does its work better than the next best, and a lot better than the ordinary kind. cannot help but advertise and praise it. Friends, relatives and neighbors see and try it and are convinced that they cannot the Economy Chief no matter where they buy or what they pay, so they, too, buy the Chief and in turn help to spread its rity and sale.

Have a Wonderful Separator in The Economy Chief. **It is the one big shining success** of the cream separator business, because it outskims and outclasses all attempted petition.

Digitized by Google

omy Gasoline Engine and Economy Chief Cream Separator—A Money Making Pair. SEARS, ROEBUCK & CO. CHICAGO.

In Original Invention, Up to Date Improvements, Ease of Runn and Close Skimming, the Economy Chief Leads the Wo

You Can Skim More Cream from any milk with the Economy Chief than with any other separator. It skims old milk, strippers' milk and milk from the breeds most difficult to skim perfectly.

It Is the Only Successful Cold Milk Skimmer and skims cold milk on which all other machines clog up, with the same ease as it skims fresh milk, warm from the cow. It gives you a beautiful smooth cream of finest texture, free from froth and just as heavy or thin as you want it.

The Secret of the Economy Chief's Success lies in its wonderful patent protected bowl and skimming cores that are the envy of all other makers, but which they dare not imitate or duplicate. These skimming cores give perfect control of the separating currents of skim milk and cream, preventing all the remixing, conflicting currents and lost motion that cripples the effectiveness of less perfect bowls.

In the Economy Chief Bowl the milk is guided and controlled from the moment the whole milk enters it until the completely separated milk and cream pass from their respective exits. The full centrifugal power generated by the rapid revolution of the bowl is utilized, and the result is the complete and almost instantaneous separation of the skim milk and cream, regardless of age, condition or temperature. It saves cream for you with every turn of the crank that other less effective bowls lose in the skim milk. We positively guarantee the Economy Chief to be the world's closest skimmer under all conditions.

The Economy Chief Bowl is built of the finest wrought steel, forged, turned and drawn into shape and is of giant strength. The frame of the Chief is heavy and rigid and scientifically designed to withstand many times the greatest strain that can be put upon it in use.

The Shafting is of the finest carbon steel, of ample size. Every moving part runs in extra long bearings of genuine Harding formula phosphor bronze, making a nearly frictionless and wearproof construction. The bowl runs in patented bearings which are marvelously simple and effective. They absorb outside shocks, prevent vibration and noise and automatically hold it to its true center so that it runs easily and quietly.

There Are But Three Gear Wheels, the smallest possible number. The supply tank is drawn from a single piece of heavy steel without a seam or sharp corner. The new Chief is right even to the sm detail. It is built in the largest and best equipped cream sep factory in the United States. Over 600 men are employ year around in building it. The best modern machinery a finest tested material made to our own formula and skill careful workmanship in every operation make it the most and durable cream separator made.

Take An Economy Chief Apart and compare it, by piece, with separators. You will find our material and workmanship so superior that it will astonish you. When you note the long anti-friction bearings, the wide faced gears and the fine steel shafting, the secret of its strength and durability plain to you. You will not single frail or delicate par ball, roller or cone bearings friction clutches. No fancy ments to make. It is simpl sible and solid. A machine to stand hard usage and work year after year witho pensive repairs or overhaul

The New 1912 Mo while retaining every one o great exclusive features which made the Economy Chief s cient and durable, have been forced and improved in ways. In all sizes we are no ing reinforced skimming core double thick top and bottom and ribs. We have also adopt improved lower bearing whic be quickly removed withou turbing the gearing or other

Our New Triple Br Bearing for the pinion s gives it over 4 of anti-friction bearing su making a practically wear construction. The cream t now detachable and can be replaced with a new one in a m if ever necessary. The new easily cleaned bowl pot on th and 600-pound sizes is an idea housewives will appreciate face of the large gear wheel and pinion are nearly 50 per cent than in last season's models, making for still greater durabil

In the New 600-Pound Model we have also mad base wider and h and increased the capacity of the supply tank. The interior frame on all sizes is easily accessible for oiling and cleanin in design it is the strongest and most handsome we have turned out.

You Will Be Delighted with our new models. Their quality is seen at the first g and long use will serve to confirm your good opinion. separators cannot be made.

We Give $2.00 in Value to the Agent's $1.0

If Made in the big up to date Economy Chief Cream Separator factory and sold at a single small profit over the factory cost, the way we sell the Economy Chief, any of the agents' machines could be sold at the same price as the Economy Chief, and many of them for a great deal less, for no separator costs more to build than the Chief.

You Are Asked to Pay $60.00 to $90.00, or even more, for agents' machines because they are sold on the profit—profit—profit and more profit plan. The factory profit, state agent's profit, local agent's profit and de profit raise the price to you clear out of sight but do not cent to the real value. Agents charge you $2.00 or mo every dollar's worth of value they give you. Our prices, as below, are as much as any separator of any make is really and should be your guide in buying. Agents will ask tw much for their machines, or even more, if they think yo stand for it, but not a single agent's machine has the real in it that you get in the Economy Chief.

ose You Were Thinking of buying a farm in a locality where you were not acnd and had selected a likely looking place but were a little ul about putting your money into it for fear it might not ut to be as good as it looked.

e Owner of the Farm, putting his hand on your shoulder and looking you t in the eye, would say, "I know this farm is just as I have ested it to be and you can make money by working it. ve it I will let you till it for a season and harvest a crop. f you are satisfied that it is the farm you want you can r it; if not, we will call the deal off and you will not be out t." You would be more than likely to take up his offer, e you would know that he was a pretty square sort of a nd must be sure his farm was just as he claimed it to be.

's the Kind of an offer we make and always have made on the Economy Chief Cream Separator. ve every buyer sixty days' trial so that he can see if it is e kind of a separator he wants and if it is going to be a making investment for him.

Have So Much Confidence in the Economy Chief that each year we put nds of them in the hands of customers to test out alongn all agents' machines, such as the Bluebell, De Laval, ks, United States, Etc. We don't ask the name of the other ne or the price. We let the expert agent run his machine, r customer, even though he never before saw a cream sep- can run the Economy Chief and beat the agent at his own because the Economy Chief easily outskims and outclasses mpetitive machines.

Expert Is Needed to tell which machine is the best. The solid strength and durability of the my Chief shows in every line, and the way it handles cold nd delivers a solid stream of smooth, perfect cream while ent's separator is clogging on the same kind of milk, is an ener.

Good Centrifugal Cream Separator will save a world of that is wasted by the old fashioned pan raising or gravity , but the Economy Chief does more than this and actually ream that other separators do not get because they cannot s closely. It also skims cold milk that other machines kim without clogging and it handles old mixed milk and r's milk perfectly.

u Are Milking Cows, no matter how you dispose of the milk, we ask you by all to order an Economy Chief on two months' trial. If you mming by hand and making butter at home it will give extra pound of butter for every three you are making butter will be finer in quality and bring a bigger price. g to a cheese factory or whole milk creamery, skim at stead, saving the long daily haul and you will also have utritious skim milk for the young stock. If you are shipream it gives you a richer and heavier cream than you can any other way.

Should Have An Economy Chief ready for use in case of accident rgency. If roads are bad or bridges down and you cannot the creamery, cheese factory or railroad station, the Econhief will always save the cream. Cream keeps well, is cheaply and the demand, at good prices, is always greater e supply.

R GREAT SKIMMING CHALLENGE TO L SEPARATOR MANUFACTURERS

nomy Chief is the Closest Skimmer in the World, Under All Conditions, and We Can Prove It. There is No Other Just as Good.

Will Give $1,000.00 in Gold

separator manufacturer who can produce a machine that will n the Economy Chief at temperatures of 50, 60, 70, 80 and 90 s. We make this offer to the makers of the De Laval, the s, the Empire, the United States and every other machine sold United States. We have tested them all and we know what we king about. The New Economy Chief ranks first. The best of ers is a poor second.

r Great $1,000.00 Skimming Challenge has been widely advertised ers. It has been open to every cream separator manufacturer in ited States, is still open and has never been accepted. No sepmanufacturer dares meet the Economy Chief in a fair and square ing test. It simply outskims and outclasses all competitive s on hot or cold milk.

Mr. Dairyman— We want to put an Economy Chief in on trial with you and we ask you to use it for two months. If you find it pays you and is a money maker, keep it. If not, send it back and we will return any money sent us. We will also pay all freight charges both ways and in addition allow you a fair price for reboxing it. and hauling it to the depot.

Give the Economy Chief a good thorough test and look it over carefully. Let your wife run it and ask the neighbors to examine it. Compare it with the best separator in your neighborhood. Test the skim milk and cream from it or have them tested at the creamery. Compare your cream checks with what they were before you received it. Carefully note your saving in labor, time and money, and if after a two months' test you are not well and fully satisfied with the Economy Chief in every way, we want you to send it back.

Do Not Keep It if you are not fully convinced that it is a time saver and money saver for you. We do not want to have a single dissatisfied customer and would far rather lose the sale than have you keep the separator if you are not well pleased with it and glad to recommend it to others.

This Offer Is as Fair and Square as we know how to make it. We do the largest cream separator business in the United States and send every machine out on sixty days' trial, making the buyer the sole judge. We will accept your decision without question, return all money paid us, pay all freight charges and allow you a reasonable amount for reboxing the machine and hauling it to the depot if you return it.

Let Us Send You an Economy Chief on these terms and after a fair trial we are sure you will wonder how you ever got along without one.

THE ECONOMY CHIEF GUARANTEE

Economy Trade Mark Registered in United States Patent Office.

CERTIFICATE No.————

CERTIFICATE OF GUARANTEE

This is to Certify that the Catalog No.————CREAM SEPARATOR, sold————Town of————

State of————is warranted to be perfect in material and workmanship, and perfect in operation, if properly set up and managed. We agree to replace, free of charge, any piece or part giving out by reason of defect in material or workmanship, for a period of twenty years from date.

When referring to this guarantee, please do not fail to mention Certificate Number, and also bowl number, which will be found stamped on bottom of bowl of machine.

Dated at Chicago, this————day of————A. D. 19——

SEARS, ROEBUCK AND CO.

This long term binding guarantee goes with every Economy Chief.

The Economy Chief Is Built with an accuracy and care that is unknown in ordinary machine shops and factories. Not only is the finished machine carefully examined, run and tested in every possible way by trained experts, but each individual part is measured, gauged and examined by keen eyed inspectors whose gauges and templates will not allow a variation from the true size of half a thousandth of an inch.

The Inspection Department is entirely separate from any other. No workman or foreman knows who will inspect his work. No inspector can tell whose work he is inspecting, so there is no chance for favoritism. Every bearing, shaft, casting and stamping bears the inspector's stamp, showing it to be perfect and accurate as to size.

This Is the Best Evidence and Guarantee that the Economy Chief is perfect. That you may have written evidence of it we issue to each Economy Chief buyer a written guarantee by which we bind ourselves to replace free of charge any part giving out through defect in material or workmanship for a period of twenty years from the date of purchase.

This Gives You Full and Complete Protection and by its terms, if by any chance a part should show a defect of any kind in years to come, we not only replace it free of all charge, but also send it to you with all transportation charges prepaid.

Digitized by Google

WAYS OF ORDERING

BE SURE TO SEND YOUR ORDER DIRECT TO OUR CHICAGO STORE.

No Matter Which of the Following Methods of Ordering You Adopt You Have a Full Sixty Days' Trial, and In Case You Send Back the Separator We Always Promptly Return All Money Sent Us and Pay the Freight Charges Both Ways.

Sending the Full Amount of Cash With Order

The best and easiest way of ordering is to simply send us the full price of the separator selected with your order, either in the form of an express money order, postoffice money order, personal check or bank draft. As soon as we receive it we make prompt shipment of the separator. In a few days it arrives at your station and you merely call for it, pay the agent the small amount of freight charges due, take it home and put it into use for sixty days before finally deciding to keep it. Then if you don't want it, send it back to us at our expense and we will promptly send back all your money, including the freight charges you paid. This is the plan followed by nine out of ten of our customers and we feel sure that if you adopt it you will find it to be the easiest, simplest and best way.

Sending No Money At All With Your Order

If you would prefer not to send the money with your order just go to your banker in your home town and get from him a letter saying that he knows you to be reliable (which you can easily do). Enclose this letter with your order and we will at once ship the separator selected. After you have had sixty days' trial and are satisfied that the machine suits you in every way you can then send us the money.

We Will Ship C. O. D. On a Small Deposit

We will ship any separator on $1.00 deposit if you live East of the Rocky Mountains or on $5.00 deposit if you live West of the Rocky Mountains, the balance to be paid to the express agent when the separator reaches your depot.

This is a good way of ordering, but has a slight disadvantage, as the express companies usually make a charge of from 50 to 75 cents for the collection and return of the money to us, which you must pay. This is not a large amount, still by sending us cash with your order you can save it, and it is, of course, well worth saving.

Depositing the Money In Your Home Town Bank

By this method your money remains right in your own bank in your home town while you are trying the separator and you can get it at once in case you decide to return the machine to us. If you wish to order in this way just write us asking us to send you a copy of our Cream Separator Certificate of Deposit and we will do so at once. When you receive this certificate take it to your local bank in your own town and deposit the purchase price of the cream separator with your banker. He will fill out and sign the certificate and you can enclose it with your order. As soon as we receive it we will at once ship the separator which you select.

When the separator arrives take it home and use it for sixty days. Give it a good trial and if at the end of the sixty days the banker does not hear from you, or if you let him know that you are satisfied with the machine, he will send the money you have deposited to us, or if you decide to return the separator to us within the sixty days simply deliver it at the railroad station and the railroad agent will give you a bill of lading. Take this bill of lading over and hand it to your banker and he will at once return to you all the money you have deposited with him, and we, of course, will pay you back all the money you paid for freight charges, so that your trial will not cost you a penny.

If Offered Time or Easy Payment Terms By an Agent

Do not accept his offer, no matter how liberal it may seem, without first writing us.

We can prove to you that it is to your interest to buy and use the Economy Chief, and no agent can make better prices or more liberal terms than we can. We want your cream separator order and will meet and beat any and all competition.

Old Cream Separators Taken In Exchange

If you have an old centrifugal cream separator of any make that runs hard, does not skim clean or is worn out, we will make you a most liberal proposition to take it in exchange for the big fast skimming Economy Chief.

If you are using your old separator every day you can arrange to keep right on using it until the new Chief is received and put into use. When we receive your old machine we will hold it for sixty days while you are trying the Economy Chief and will send it back to you and return any money paid us in case you wish to return the Chief.

In the past two years thousands of customers have taken advantage of our exchange offer and we have yet to hear of one who was not well satisfied with his bargain. If your old cream separator is worn out or is in need of expensive repairs, by all means send for our cream separator exchange offer. It will surely interest you.

FREIGHT CHARG

FROM KANSAS CITY, M

Freight charges are alike to one a and your local agent or dealer mus exactly the same rates as you do.

He always figures the freight char the price when he sells you a separat usually charges a good profit on the f charges as well as his profit on the s tor itself, as you can easily see whe compare his prices with ours.

In order to make the freight charg as low as possible and to insure quic livery we ship direct from our wareh Kansas City, Mo. We print below which gives you the freight rates p pounds on cream separators from our house at Kansas City, Mo., to points i state. The average shipping weight is 215 pounds and the freight rates t town will be almost exactly the sa they are to the town given on th which is nearest to you.

ECONOMY Gasoline Engines Are Well Named—$29.95 and Up. Guarant

Digitized by Google

hy 98 Per Cent of the Best Farmers Use the Economy Chief

e **Economy Chief** has always been built for everyday farm use. It is not made merely to show at fairs and exhibitions. There are no fancy fixings put in t for the sake of having something to talk about or to catch the eye of prospective cus- ners, and give trouble forever afterward.

gents' **Machines** are built to display a lot of so called talking points and selling features. The agent must have something new and something different from ryone else to talk about. His new feature may be of no value and is more than likely to entirely impracticable for use in a farm separator, but it gives him something to talk on, and that is the thing, for talk is his stock in trade.

e **Economy Chief** is built, not for show purposes, but to do the work, not only when you buy it, but for months and years afterward. Built to last indefinitely. There is almost wear out to it with ordinary care. All the parts that are subjected to any wear whatever are removable can be replaced, if need be, at a trifling cost.

The High Skim Milk Spout.

The skim milk spout is high so that a big milk can goes under it easily. The cream pail sets on a shelf where dirt is not likely to fall into it, and out of the reach of cats and dogs.

IT IS THE ACME OF SIMPLICITY

Really By Far the Most Simple Cream Separator Made.

The Self Cleaning Bowl.

After skimming, simply run through 2 or 3 quarts of warm ter in which a little washing powder has been mixed and cores are cleaned perfectly by the same great centrifugal ce that skims the milk. When the bowl has stopped and cores are removed they will be found to be bright, clean dry. The easy cleaning features of the Economy Chief a delight to the housewife.

There are no fine adjustments for the user to make. It is adjusted just right at the factory when it is built, and stays that way. No ball bearings, cones, adjusting nuts, washers, etc., to fuss with; no clutches that do not clutch. Nothing for you to ever change but the cream screw; which is just a simple screw. If you want heavier cream, turn the screw in a little. If you want a lighter cream, turn it out. That's all there is to it.

Anyone Can Learn to operate the Economy Chief in a few minutes' time, even though they never before saw a cream separator. Every operation so simple and so natural that directions are hardly required, although furnish full and complete directions with every one.

ere Is Nothing About It that requires a mechanic or a skilled workman. No tools are needed except screwdriver and wrenches that go with it. Your wife, boy or hired can run it and skim the milk just as well as the most accomplished ert. It's almost nothing to clean. Needs no special care except ordinary oiling and cleaning any piece of machinery must have.

FEW PARTS AND VERY SIMPLE.

Very Few Parts and not a single weak or delicate one. Only one-half to one-tenth as many parts as other chines (by actual count some widely advertised machines have ten es as many parts as the Economy Chief.) Only five parts to the nomy Chief bowl, instead of 40 to 50 separate parts as in some chines. Only three parts to the Economy Chief ratchet. Pinion and ft are cut from a single steel bar. The worm wheel is pinned movably to the shaft.

djusted Right at the factory and stays that way. How much better this is than having to bother with a handful cones, balls, washers, nuts and set screws that are always working and giving trouble. Look out for the complicated machine that agent sells. Many of them are filled with talking points for the nts and trouble for the user.

e **Economy Chief Frame** is a tower of strength. Strong and solid as a rock and will not weave give while running. Scientifically built to give the greatest rigidity, of ample weight. It is sanitary; easy to sweep or mop under; no pers for dirt to gather. No spilled milk, and the new tool shelf and collector prevents oil stains on the floor. It is the only separator can be used in the kitchen without giving the housewife a world leaning to do.

e **Crank** is only 9½ inches long and is just the right height for easy turning without straining the back and arms. The ply tank is low enough so that a short person can pour a pail of into it without straining himself or splashing the milk, yet high ugh so that dirt or dust is not likely to fall into it.

Shelf Is Provided for the cream pail, raising it up from the floor. The skim milk spout is high. You set an 8-gallon can under it easily. This is a point worth watching. the so called low tank machines the skim milk spout is often so low you can only put a small vessel under it, which must be changed tinually, as it fills while skimming, usually splashing the milk over floor and machine in making the change.

e **Bowl** is light and easy to handle, yet of enormous strength. The bowl spindle is of solid carbonized steel of the highest ality. All shafting is cut and turned from fine steel. Every moving runs in extra long bearings of the genuine Harding formula sphor bronze, the finest anti-friction metal in use.

Only Three Gear Wheels, all heavy and strong, and cut with the finest gear cutting machinery money can buy, insuring perfect accuracy and easy running. The supply tank is not made of pieces of tin soldered together in the ordinary way, but is drawn from a single sheet of heavy steel, smoothly and without a wrinkle or sharp corner. No dirt and germ collecting corners or leaky seams in this tank. It will last as long as the separator does.

The Economy Chief is built complete in the big Economy factory, the finest, largest and most completely equipped in the United States.

It's Only by Building it in one great factory, so that we know that every bit of material in it is the best that money can buy for its purpose and that every part is of ample strength and accurately made by careful workmen under our own supervision, that we can ship them out as we do all over the United States on sixty days' trial, to be matched against any and all machines in the hands of expert agents.

The Economy Chief is built to compete with any cream separator made at any time or any place. In the hands of the most inexperienced dairyman who perhaps has never before seen or at least run a cream separator, it must defeat the experienced agent who is an expert in covering up the weak points of his machine and showing up its good points, and it does it.

The Economy Chief cannot have a single weak point. If it did we could not send it out on trial as we do. About 290,000 Economy Chief Separators have been sent out on trial and are now in use. They have met and defeated all the prominent machines in the hands of experienced agents thousands upon thousands of times. The Economy Chief is simply unmatched for simplicity and effectiveness. It outskims, outwears and outclasses all competitors.

The Handy Tool Shelf.

This is an exclusive Economy Chief feature. The tool shelf has ample room for wrenches, oil can, etc., and they are easily reached from either side. It is provided with a covered oil collector that saves all the waste oil and prevents oil stains on the floor.

Use It Alongside of any other machine and see for yourself how much better it skims warm or cold milk, how much easier it runs, how simple it is compared with other machines, how easy to handle, to clean and to care for. The Economy Chief has won its place on pure merit as the most popular and biggest selling cream separator in the United States, simply because it is the best in every way.

No Matter What Separator You May Favor or what the agent or dealer may tell you, do not close the deal for any machine at any price without first trying it alongside of the Economy Chief. Remember, it costs you nothing to try the Economy Chief. We will gladly ship it to you for sixty days' trial alongside of any cream separator made, regardless of price or reputation, and you are to be the sole judge of which is the better.

We Do Not Ask You to sign any contract or agreement of any kind. You are not under the least obligation to us to keep the Economy Chief because you have ordered it on trial. If after your test you wish to return it to us, we will at once without question return all the money you sent us and pay all the freight charges both ways, so that your trial will not cost you as much as a single penny. Send us your order on trial and let us show you what the Economy Chief will do.

Digitized by Google

THE ONLY BOWL That Skims Cold Milk as We Warm and Purifies and Ae Both Skim Milk and C

The Economy Chief Bowl skims anything in the milk line that can be skimmed. Skims warm or cold milk, new, old or mixed milk, strippers' milk, and milk from cows of all breeds and cows on dry feed. Skims milk in any condition right down to a trace so small that it can only be found by a fine chemical test. Skims perfectly clean for all practical purposes.

We Fully Guarantee the Economy Chief to outskim any cream separator made, at all temperatures. Some separators skim warm milk fresh from the cow nearly as closely as the Economy but when conditions for skimming are difficult, when the old or cold, or from cows far advanced in lactation, th waste cream, clog up and are useless. They one and the wonderful reserve capacity, the great patented im ments that put the Economy Chief bowl in a class by it the only cold milk skimmer. The best separators of the makes lose twice as much butter fat as the Economy under average conditions; ordinary separators lose fro to ten times as much. Butter fat is by far the most v of all farm products, and you cannot afford to waste a dro

To Get All the Cream under all conditions, winter and summer, you must use the Economy Chief. No separator is made or can be made that will skim the cream from thick, clabbered milk or milk that is so cold that it is partly frozen, as the particles of ice and slush will fill up the exits. But the Economy Chief will skim anything else.

In Winter when the cows are giving but little milk, you can mix the morning and evening milk and skim once a day if you use the Economy Chief. With any other separator you must heat the milk before you can skim it. Think of the labor of building fires and the fuel you must use if you are obliged to heat milk before skimming during the cold winter season, which means nearly six months of the year.

You Can Save all the heavy lifting and fire building and the danger of scorching the milk by buying the right separator in the first place, the only one which will skim the milk cold as well as warm. This is the patent protected Economy Chief that other makers dare not imitate. Close skimming under all ordinary dairying conditions is necessary if you are to make the greatest profit from your herd. Every drop of cream left in the skim milk means valuable butter fat lost. Some separators lose cream with every turn of the crank. None skim as closely as the Economy Chief.

You Have Read our great $1,000.00 challenge offer on a preceding page. This offer has been made for years and widely advertised. Every separator maker knows about it, but it has never been accepted. They know from their own tests and from the experience of their agents in the field that their separator cannot compare with the Economy Chief for close skimming.

You Can Buy a Cow Every Year with the cream that the Economy Chief will save that other separators would lose if you are skimming the milk from a herd of ten cows.

Like All Really Great Original Inventions the Economy Chief bowl is simple. There are only five parts to it: The bowl shell, two skimming cores, center bolt and bowl cover. Yet this simple five-part bowl, because of its wonderful control of the separating currents of skim milk and cream so that every inch of its skimming surface is utilized evenly and to its fullest extent, is more effective than the thirty or forty-piece bowls of less scientific construction.

In the Economy Chief Bowl the milk is guided and controlled from the moment the whole milk enters the bowl until the separated skim milk and cream pass out their respective exits. The cream is purified smooth and velvety, and the completely separated skim milk also is purified and aerated.

There Are No Conflicting Currents and no remixing of milk already skimmed in this bowl. The milk and cream are separated almost instantly under the influence of the centrifugal force, the skim milk passes out at the bottom of the bowl and the cream at the top, quickly and quietly. It is this perfect control of the separating fluid in the bowl that prevents clogging in the Economy Chief and makes it such a remarkable cold milk skimmer.

The Dirt Collector and Purifying Chamber is an original Economy feature. Every drop of whole milk must pass through it before it enters the skimming chamber. Here all dirt, hair and other impurities are removed and deposited, and the purified milk passes down through an equalizing distributer which feeds it into the neutral zone of the skimming chamber, where under the action of the centrifugal force and controlled by the patented Economy double opposed skimming discs it is almost instantly separated. The cream as it passes out is regulated to any desired density by turning a simple screw in or out. The dirt and impurities do not enter the skimming chamber at all, and both skim milk and cream leave the separator in better condition than the original whole milk.

The Simple Economy Chief Bowl

There are only five parts to the bowl. It is light, easy to handle and practically self cleaning.

The Economy Chief has the neare self cleaning bo has ever been invented. The skimming c cleaned by the same great centrifugal fo skims the milk, more powerful than the a hand, and acting upon every inch of the at once.

To Clean It requires but two or thr utes' time. After the sk is finished and the cream flushed out of t while the bowl is still running, simp through 2 or 3 quarts of warm water, to little washing powder has been added.

The Centrifugal-Force cleans th perfectly, a the bowl stops, remove them and you them clean, dry and shining like new. Th that adheres to the inside of the bowl quickly removed with the brushes we Rinse the tank and cream cover and the is finished.

Customers Grow Enthusiastic ove easy ing feature of the Economy. Many have they could clean their machines completel time than is required for the old style b arator bowl to run down so that it can apart.

Economy Chief Bowls are light a handled, but 7⅛ to 8¾ pounds, according to si are of enormous strength, being made of est wrought steel throughout and are ma stronger than is necessary to withstand th est strain which can be put upon the running.

The Bowl Top, the bowl bottom an bolt are turned and wrought steel forgings. The bowl shells a from flat sheets of tough steel in enormou es right in the Economy factory. The made up of wrought steel discs, with ext top and bottom plates and ribs, all ri gether, so that they are practically as sta cut from a solid block of steel.

The Bowl Spindle is cut from har ized steel. Th worm on the spindle is a splendid e accurate and scientific gear cutting. The bowl revolves on a tempered steel point resting on a hardened steel ball. This poin removable and can be replaced at a trifling expense if it should signs of wear.

The Hardened Steel Cream Regulating Screw is brok ing, so that it cannot rust or stick. The entire bowl, except t which is oiled continuously in operation by an automatic oiler, tinned and retinned with the best pure tin to prevent rust.

Although the Economy Bowls are so light and small, their scientific construct easily outskim bowls twice as large, weighing 12 to 15 pound taining thirty to forty loose parts. They measure but 3 3-16 in diameter, and other bowls are clumsy and hard to handle com them.

The Bowl is the most important part of any cream separ Economy bowls save valuable cream that is lost less perfect ones. Careful dairymen with their own best interes have found they can use no other, for the marvelous Economy has changed dairying from a doubtful speculation to a safe and business. It has saved and is saving many millions of dollars herd owners and is one of the greatest inventions of the ag machinery.

Economy Chief Cream Separator

1912 Models

Digitized by Google

SOME OF THE NEW FEATURES THAT MAKE THIS SEASON'S ECONOMY CHIEF CREAM SEPARATORS BETTER THAN EVER

Triple Pinion Shaft Bearings in All Sizes.

Double Strength Skimming Cores in All Sizes.

Quickly Removable Lower Bearing in All Sizes.

Detachable Cream Tube Top in All Sizes.

New Sanitary Pot on 400 and 600-Pound Sizes.

Gears 50 Per Cent Wider Than Before in All Sizes.

Extra Large Cream Pan on the 600-Pound Size.

Interior Easy of Access in All Sizes.

Big Capacity Supply Tank on the 600-Pound Size.

Extra Heavy Base on the 600-Pound Size.

trong and Lasting in Every Detail

HE SIMPLE TROUBLE PROOF GEARING

e Complete Economy Gearing **is shown in this illustration.** The large driving wheel is turned by means of the nk handle and in turn revolves a small cog wheel called the pinion. Pinned dly to the pinion shaft and revolving with it is the bronze worm wheel that, ting with a spiral worm cut in the steel bowl spindle, revolves the bowl.

is Is All There Is to It. **Only three gear wheels and only two points of contact,** the large gear with the pinion and the m wheel with the worm on the bowl spindle.

e Gears Are Amply Heavy **and broad faced and made of materials that run together with the least wear and friction.** low speed driving gear is of fine grained cast iron and meshes with the onized steel pinion. The high speed worm wheel is made of fine phosphor nze and runs with the hard carbon steel bowl spindle. This is a combination gearing experts will tell you is ideal for long life and easy running. The shaft- is all hard carbonized steel ground to exact size and runs in extra long anti- ion phosphor bronze bearings.

e Position of Each Gear Is Fixed **and exact in relation to the others.** The main driving gear bolts up to a lder on its shaft. The pinion is cut solid with the pinion shaft and the bronze el is pinned immovably into place so they cannot get out of adjustment.

e Chief Gearing Is Adjusted Right **at the factory and stays that way for it cannot be changed.** Look out ball bearings and adjustable cone bearings, bicycle chains and bevel gears. They trouble breeding fads—all right in a machine shop with a mechanic at hand to er with them and keep them running, but not suited for farm use. Stick to l trouble proof simplicity and the Economy Chief.

Strongest and most simple gearing in use.

E MAIN DRIVING GEAR AND SHAFT

Carbonized steel shafting running in Phosphor Bronze Bearings.

For long wear this combination can't be beat.

The Main Driving Shaft **is turned and ground from hard carbonized steel** and is 15-16 inch thick in the bearings. The ratchet plate is milled and cut from a steel forging and is screwed into place against a shoulder on the shaft. The driving shaft runs in two phosphor bronze bearings 1½ inches long, giving 3 inches of anti-friction bearing surface. Note this carefully, as most makers simply run the driving shaft in a hole in the frame and do not use bearings of any kind at this point.

All Economy Gears Are Cut **from the solid metal** by est gear cutting machinery and are carefully tested for accuracy mooth running. You cannot beat this construction.

THE FRICTIONLESS LOWER BEARING

Sectional view of lower bearing.

In the Lower End of the Bowl Spindle **a tool steel point tempered to flinty hardness is inserted.** This rests on a hardened steel ball which supports the weight of the bowl and spindle and in turn revolves on another hardened steel point in the lower adjusting screw. Fine anti-friction bronze bearings surround both the lower end of the spindle and the steel bearing ball, holding them in true and perfect line, so that the bowl spins as freely as a top on the steel ball.

It Would Be Hard to Devise **a better bearing than this one.** It is nearly frictionless, very simple; there is nothing to break or get out of adjustment and all parts can be easily replaced at a trifling cost if ever necessary, as both the bearing points and the ball are easily removed and replaced with new ones.

THE FLEXIBLE UPPER BEARING

The Flexible Upper Bearing **which surrounds the bowl spindle just below the neck and centers the bowl is shown in this X-ray picture.** If a sudden jar or shock causes the bowl to swing or shake, this flexible bearing brings it back to its true center quickly and quietly.

It Is an Ingenious Patented Device **and is positively and automatically self centering.** The flexible bronze spindle bearing is seated in a heavy metal block which rests on a conical rim and is centered by springs at the bottom. It acts gently and positively and controls the bowl without noise or jar.

Saves wear.

Makes easy running.

X-Ray Picture of the Upper Bearing.

HE WORM WHEEL AND PINION

Pinion and Shaft **t and turned from a bar of hard carbed steel.** The worm is made from Hardormula phosphor e, the **finest** and st anti-friction metal oney can buy and is olid example of ac- and scientific gear g.

Notice the three long bronze bearings.

he 1912 Model **inion shaft runs in anti-friction bronze gs which support it** th ends and in the middle, giving over 4 inches of fine phosphor bearing surface and distributing the strain so there is practically ar out to it. This is one reason for the strength and durability Chief. The cast iron and short bronze bearings used by other s cannot and do not last as long.

BUILT FOR HARD STEADY USE

THE AUTOMATIC LUBRICATOR.

Sectional View of Oiling System.

This Sectional View shows our automatic oiler and the tube that carries the oil to the upper bowl bearing. In operation the bowl runs very rapidly and our automatic oiler feeds lubricating oil into the spindle bearing a drop at a time at regular intervals, thus providing a constant thin film of oil between the bowl spindle and the bronze bearing, insuring easy frictionless running and preventing wear.

The Amount of Oil Required is small, three or four drops a minute being the proper feed. Our sight feed lubricator is easily regulated to feed the desired quantity by means of the knurled nut at the top and once regulated needs no further attention except to start and shut off the flow of oil, which is done by turning the top lever up or down. Our lubricator is generously large in size and made of brass nickel plated and polished. It is provided with a glass reservoir and sight feed so that the supply and flow of oil is easily seen.

THE POSITIVE NEVER SLIP RATCHET.

Our Strong Simple Ratchet has but three parts. A forged steel ratchet plate secured to the main driving shaft, a hardened steel pin in the crank which is held in contact with the ratchet plate by a single tempered spiral spring. Nothing to get out of order or break about this ratchet.

Sectional View of Pin and Spring Ratchet.

It Is Positive and Never Fails and as it operates at low speed there is practically no wear or strain upon it. No slipping, lost motion or wedging as in friction clutches, no weak intricate parts working under an excessive strain as in spindle and pinion ratchets. When you stop turning the crank the bowl and gearing run down together, stopping the bowl quickly without undue wear on any single part. The wear is distributed over all the moving parts equally and is not all upon one or two parts as it is where other ratchets and clutches are used. This old reliable pin and spring ratchet has never been equaled for strength and durability.

PHOSPHOR BRONZE BEARINGS.

Examine the Ordinary Run of agents' separators and you will find bronze or babbitt metal bearings for the bowl spindle, cast iron or short brass bearings for the pinion shaft and no bearings at all for the crank shaft which simply runs in a hole drilled in the cast iron frame. This is a cheap construction and will not last.

In the Economy Chief with the idea of quality always uppermost, regardless of cost, we insure long life and easy running by using genuine Harding formula phosphor bronze bearings of extra length for every moving part. This Harding formula bronze is the finest and hardest anti-friction bronze now in use. Each bearing is turned and drilled from a solid casting, to get the metal in its toughest and most durable form.

This Is An Expensive Construction but it pays in the end. All bearings are removable and easily replaced if ever necessary. The bearing surfaces are broached to an exact size, accurate to the thousandth part of an inch and polished to a mirror finish.

SEAMLESS ONE-PIECE SUPPLY TANKS.

Another Exclusive Economy Chief Feature is our sanitary supply tank. The ordinary supply tank is a pieced tin affair with soldered joints and sharp corners that catch the dirt and germs and are hard to clean, as housewives well know.

Economy Tanks Are the Sanitary Kind, each being drawn from a single sheet of smooth heavy steel, with full rounding corners and no seams; as easy to clean as a china dish and no crevices or sharp corners for germs and dirt to collect in. They are provided with a broad top rim so you can easily lift them from any position, whether full or empty, and the old style lifting handles are unnecessary.

The Circular Gutter in the bottom drains them quickly and to the last drop. They are heavily double tinned with pure block tin and will last as long as the separator itself. For the 600-pound size machine we have adopted an extra large tank this season, with swelled sides, which greatly increases its capacity, at the same time retaining all the sanitary features of the smaller tanks.

THE SANITARY FAUCET.

Our Ga Draining Fa

The Supply Tank Faucets are extra large to insure the full flow when the milk is low in the tank and an extension channel helps to drain the last of the milk out quickly.

The Faucet Key Is Removable and an opening in the end permits you to run a brush straight through the channel from end to end, cleaning it in a moment. An improved rest takes the weight of the tank and contents off the faucet when standing on a flat surf Notice also that the bottom of the key is flush with the faucet bot and cannot be driven up, causing the milk to run out when setting table, as the ordinary keys used on other separators will do. Our fau are cast brass, polished and heavily nickel plated.

STRONG POINTS ABOUT THE BOWL.

The Purifying Chamber and Dirt Collector.

The Dirt Collector Above Skimming Chamber.

One of the Main Reasons for the big demand for Economy cream is its purity. It keeps longer and makes butter of better flavor than ordinary cream, because every drop of whole milk entering the bowl is purified and cleansed before it is skimmed.

The Purifying Chamber is located between the cover and the top plate of the inner core. It receives all the whole milk as it enters the bowl, and by centrifugal force all the dirt and impuriti the milk are extracted and deposited here. The milk purified cleansed then passes down into the skimming chamber. In other se tors the milk is fed directly into the skimming chamber, where the d deposited between the discs, contaminating all the milk that pa through them, so that a small quantity of dirty milk will often give entire skimming a bad taste or odor. Pure milk makes pure cream in the Chief the milk is purified before it is skimmed.

THE NEW HEAVY SKIMMING CORES.

The New Reinforced Cores.

The Skimming Co this season are made extra heavy ribs and to bottom plates. As these the only parts that are jected to rubbing or when the bowl is t apart or put together. life of the bowl is than doubled and the greatly strengthened.

In the New Mod the cores are also fitted a removable cream tube which can be easily screwed and replaced by user if it should ever come worn or damaged accident, saving the tro and expense of returning bowl for repairs.

REGULATING THE CREAM.

The Economy Chief Cream runs free from froth or foam. You can regulate it to any desired density by turning the cream screw in the bowl head in or out with a small screwdriver which we furnish with the machine.

You Can Skim the Thin Cream that ice cream makers demand, heavy cream for shipping or a medium cream for home butter making with equal ease and can chang density of the cream at any time without taking the bowl apart.

The Cream Screw is made of hardened steel and turns in a bu bushing set in the bowl head, which pre it rusting in and sticking.

Every Detail in the Economy Chief is worked out greatest care and no pense has been spared in our aim to make it the most perfect of all cream separators.

We Use The Very Best Material regardless of cost. Our men are skilled and car Every part is carefully gauged and inspected by trained inspectors. finished machine is tested by power and by hand. The Economy is honestly good all the way through and we stand back of every we put out, guaranteeing it absolutely to do all that any separator do better than any other machine made, regardless of price.

DAIRYING FOR PROFIT

)W TO MAKE THE MOST MONEY IN THE EASIEST WAY

WELL MANAGED DAIRY YIELDS BIG RETURNS.

ell Conducted Dairy **is a source of continual pleasure and profit for its owner.** No other form of ‹ pays so handsomely or so surely. Dairying not only brings a ome every month in the year, but enriches the soil. With the fertility, larger crops and natural increase in his herd the wise who is careful to get the greatest benefit from his dairy, soon hat his industry has placed him in a position of competence and

THE SECRET OF SUCCESS.

Sure Way to Quick and Certain Success In Dairying **nake use of the products while they are in the best condition and ring the greatest returns.** For example, butter fat fed to the pigs sour milk is nearly valueless, while the same butter fat if sold in fresh cream will bring 25 to 35 cents a pound. Again, a pile of manure in the barnyard not only has no value, but is a nuisance, at same manure rightly spread on the fields will so fertilize the at the increase in the crop yield may be worth hundreds of

THE GOLDEN CROP OF BUTTER FAT.

r Fat Being the Most Valuable Dairy Product **the most costly of all farm products,** naturally the first care of ughtful dairy farmer is to get all the butter fat from the milk best condition. Butter fat is distributed through the milk in s of tiny particles. Ordinary milk contains about two million s of butter fat to each drop and to extract and concentrate these fat particles in the form of cream is the dairyman's most import- oblem.

D WAYS OF GATHERING BUTTER FAT.

lden Times **the only known way of gathering the fat particles** was to set the milk in pans in a cool quiet place time the butter fat particles being lighter a part of them would rise to the surface, to be skimmed off as cream, but this causes of from one-half to one-fifth of the butter fat which never rises top and is wasted or fed to the pigs in the sour skim milk.

Cooley Can or Deep Setting System **for raising the cream in tall nar- ns plunged in ice water** is just a little better than the shallow ethod but the loss is still a serious one.

Dilution Method, **by which cold water is mixed with the milk before setting it aside to cream,** is the of all gravity systems. The cream is thin, poor in quality and s not much of it. The mixture of sour skim milk and water that is almost useless for food and animals grow poor drinking it.

'HE OLD METHODS ARE WASTEFUL.

and All Gravity Systems Waste Butter Fat **as from one - half -fifth of it does not come to the top and is left in the skim milk.** eans a clear loss of from one-half to one-fifth of the total gross Not one business in ten can stand a loss like this and survive; so successful the dairyman must avoid this waste.

THE WHOLE MILK CREAMERY.

ıg the Whole Milk to the Creamery **is another waste- ful way** as, while r credit for all or nearly all of the butter fat, the cost of the back and forth eats up a large part of the profit, if you pay to done, or takes a great deal of your own valuable time if you do self. The skim milk from the creamery vat is always a source ger, as it is more than likely to contain contagious germs from animals in other herds and may spread tuberculosis, lumpy other deadly diseases among your young stock.

THE EASIEST WAY OF ALL.

Only Way to Make the Greatest Possible Profit **our cows is to use a centrifugal cream separator** and separate butter fat from the fresh milk as soon as the milking is finished le it is still fresh and in perfect condition. This not only gives the fat in its best condition, but in addition, you have the kim milk still warm with the animal heat of the cow and full of ous and life giving properties for feeding.

t Skim Milk Is Worth Ten Times as Much **as the old sour er feeding;** in fact, with the addition of a little chopped corn or al it is fully equal to whole milk for raising young stock.

THE ROAD TO SUCCESS.

First and Most Necessary Step to Successful ying **is to buy an Economy Chief Cream Separator** and sep- arate the cream from your milk at home as fast as the g is finished, and whether you sell the cream or make and sell you have solved the profit problem in your dairy.

Economy Chief Is Going to Make It a Sure Money er **at all seasons of the year.** It gets every bit of the fat out of the milk and gives you the skim milk and cream while they the very finest condition. The day you start to use it the hard drudg- the dairy disappears and the market value as well as the quantity r dairy products increase. You are on the road to sure dairy s. You are proof against ordinary bad seasons or crop failures. the sale of butter or cream there is a continual stream of money g on to your farm. The soil grows richer and more fertile year r and the harvest is not confined to one season, but is continuous.

ANYONE CAN USE IT.

Compared With Other Farm Machinery **the Economy Chief is very simple.** There is nothing complicated or mysterious about it. You don't have to be a mechanic or know anything about machinery to use it. The hired man, a half grown boy or your wife can run it just as well as you can, but simple though it is, it is a most wonderful money maker and starts to pile up profit for you the day you put it into use.

To Operate It **you simply pour the milk into the supply tank** as fast as milked or when the milking is finished. Turn the crank and turn on the faucet that lets the milk into the bowl. In a moment a stream of the finest, pure, smooth cream comes from one spout and the sweet fresh milk from the other.

It Separates the Milk From the Cream **at the rate of a milk pailful in from two to four minutes,** according to the capacity of the machine. The cream is smooth, velvety and free from froth and can be regulated to any desired consistency, from the thinnest to the heaviest, by turning a single simple screw.

In Passing Through the Bowl It Has Been Purified **and cleansed of germs and dirt** and when cooled will not only bring a bigger price than the old sour cream from the pan raising method, but will keep three or four times as long. The skim milk is also puri- fied and aerated and is in the very best condition for feeding.

BETTER IN EVERY WAY.

Instead of Losing From One-Fifth to One-Half **the butter fat, and** getting the balance in poor condition, you take it all from the sweet fresh milk while it is in its finest condition, and the Economy Chief has made the difference. The dairy work is so easy. Thirty minutes after the milking is over the skimming is finished, the cream set aside to cool in a single can and the separator washed. The sweet skim milk has been fed to the stock and the dairy work is over.

Instead of 100 Pounds of Milk to Handle **you have but 10 pounds of cream.** Only one can to scald and wash, where you had twenty pans before. No sour milk standing around. No tiresome hand skimming. No long hours of work in a damp chilly dairy and no long hauls to the creamery over good or bad roads in all kinds of weather. Your cows are so little trouble that you hardly know you have them, and the best part of it is that you will make several times as much profit from each cow as you did before using the Economy Chief.

BOTH SKIM MILK AND CREAM PURIFIED.

The Purifying Chamber in the Economy Bowl, **through which the whole milk must pass before entering the skimming chamber,** takes out all the dirt and germs that may have dropped into the milk after leav- ing the cows. The cream, purified and aerated, is delivered in the smoothest and most elegant condition, free from froth and containing any desired proportion of butter fat.

After Cooling **it will keep in good condition** several times as long as gravity raised cream which has been spread over the top of the sour milk for hours, gathering dust from the air and rapidly fermenting.

A SAVING IN MANY WAYS.

In Churning Separator Cream **the saving over gravity raised cream amounts to 15 or 20 pounds of butter extra in the course of a year from the milk of a single cow,** because it churns out more completely. Separator cream, too, churns in about one-half the time of gravity raised cream. The butter granu- lates quickly and there is less buttermilk and less fat left in the butter- milk.

Separator Cream Can be Shipped Hundreds of Miles **if desired.** This gives you a broad market and you can always sell at the highest price. ith the Economy Chief you can skim any cream, from the thinnest, to a cream so heavy that it will hardly flow. It is a big advantage to be able to skim a 40, 50 or even a 60 per cent cream, as you can do with the Chief. If shipping cream, you make a big saving in freight charges if the cream is rich and heavy, as a can con- taining a rich cream may contain twice as much butter fat as a can of thin cream, and although the value is twice as much, the freight charges are no more for the rich cream than for the thin cream, so they cost you only half as much for each pound of butter fat in the cream.

SWEET SKIM MILK FOR FEEDING.

The Fresh, Sweet Separator Skim Milk **still warm with the animal heat of the** cow and aerated and cleansed by passing through the Economy bowl makes splendid food for young animals and they thrive on it. Pigs and calves on a sweet skim milk diet grow fast and put on flesh rapidly for it contains all the protein of the whole milk, the rich nutritious sugar of milk, the caseine and, in fact, everything necessary to build muscle and bone rapidly and cheaply. **All that is lacking is the butter fat** which simply supplies the animal heat and fat producing elements. A little oil meal or corn meal, worth about a cent a pound, takes the place of the high priced butter fat and makes the skim milk just as good for feeding young animals as the sweet whole milk fresh from the cow.

Calves and Pigs Brought Up on This Diet **grow rapidly and at the end of the first year are heavier** and in more marketable condition than they would be at the age of two years if fed on old sour milk. Don't raise sickly stunted stock on old sour milk for they are a drug on the market and hardly worth the time and trouble of bringing them up. Feed no milk but sweet nutritious skim milk and you will raise stock that you will be proud of and can always sell readily at a big price.

Sweet Skim Milk Is Also a Splendid Food for Chickens **and careful poultry feeders value it at not less than 50 cents per hundred pounds** for this purpose when fed with corn meal. In towns and cities it is in great demand by bakeries and is very valuable as human food.

MAKE YOUR DAIRY A BIG WIN

GET THE TOP PRICE FOR YOUR BUTTER.

Separator Butter Always Brings the Highest Price. Turn to the market report in your daily or weekly paper and you will see that separator or creamery butter is quoted at from 3 to 10 cents a pound more than common dairy butter. Even in the spring, when butter is most plentiful, there is always a greater demand for high grade separator butter than can be supplied.

Economy Chief Cream Makes Butter of the Finest Quality because it has been purified and the dirt and harmful bacteria removed. It is in just the proper condition for butter making. It ripens evenly, churns quickly and completely. With a little care the grain of the butter is perfect, the flavor unsurpassed and in keeping qualities it has no equal. It is worth more than dairy butter and always brings more.

You Will Be Surprised to See How Easily Your Butter Will Sell and the good prices that it will bring. Hundreds of our customers have told us that they are now getting from 8 to 10 cents a pound more for their butter than they did before buying a cream separator, and many have said that the increase in the selling price of their butter alone has paid the whole cost of the Economy Chief the first season.

NOW IS THE TIME TO START.

Don't Hesitate or Put It Off but start on the easy and profitable way of dairying by ordering the Economy Chief this very day. Sell a cow if necessary. Three cows and an Economy Chief will pay you much bigger profits than four without one, for you not only double your profits but also save board of the extra cow. It will pay for itself the first season if have but three cows, and pay for itself ten times over in a season thirty cows and will continue to make money for you at the same for years to come.

ORDER ON TRIAL TODAY.

Don't Delay, But Order an Economy Chief on trial away and results will surprise you. You will have better cream and more Cream of any density, from the thinnest to the richest. Better b with less churning. Sweet pure skim milk in the best condition for f ing. Larger and better calves and swine. Larger prices for everythi for butter, for cream and for stock. A big reduction in the dairy

Do Away With the Long Hours of Hard Work in a d a dairy and the endless labor of building fires and washing cans and pans heavy lifting and the wear and fear on man and beast in the long to the creamery. There is a sure profit for you in the Economy Chief profit with every turn of the crank, week days and Sundays, the around. You will get big returns with less than half the time and you have spent heretofore in striving for small profits or perhap profit at all.

While We Have Tried to Tell you about the Economy in a plain honest way in pages, the best way to find out for yourself just what it will do your own farm conditions is to order one on trial for sixty days. put it off, but order now— TODAY.

BUYING AGENTS' TALK

Every month in the year cream separator agents by thousands are wearing out the roads in their everlasting search for farmers who are willing to be talked out of forty to fifty dollars in real money.

The agent's stock in trade is a supply of separators worth $25.00 to $40.00 each and his one object in life is to dispose of these separators to farmers for $40.00 to $50.00 more than they are worth.

When he makes a sale he takes a liberal share of the $40.00 to $50.00 profit for himself and the rest goes to state agents, jobbers and other middlemen between the buyer and the factory.

The agent must have a well hung tongue and a pleasing and persuasive manner to be successful. He must so charm you with his windy boasts and reckless promises that you forget to look at his separator at all because if you did you would easily see that it is not worth half what he asks for it.

No matter what make of separator the agent sells he always loudly claims that it is the best and only one for you to buy. Not that he has any real knowledge on the subject; not one agent in a hundred ever saw the inside of a separator factory in his life and he knows very little about his own separator and practically nothing about others except from hearsay.

The agent's promises are many and easily broken because he never puts them in writing. He tells you when your separator needs repairing he will fix it for you. As a matter of fact he is no machinist and you can do a better job of repairing yourself than he can.

He tells you also that he always has repairs on hand, but when you need a repair, where is the agent. Very likely he is canvassing in the next county and when you locate him you find he has to send to the factory for the repair you want, w you could have done just as well yourself in the first place.

The agent is a persistent individual, he sticks to the pos buyer like glue. He repeats his little story over and over promises anything and everything to get your money, but the sale is made he loses interest in you. He never expec sell you another separator and has nothing else to sell, s don't care what becomes of you or the machine.

The quick and easy way to get rid of the talkative separ agent is to say to him, "I won't pay you a cent more for separator than Sears, Roebuck and Co. ask for their Econ Chief Separator, and what is more, you must give me sixty d trial the same as they do. I will then put one of their mach in on trial alongside of yours and see for myself which on the best."

This is a knockout blow for the agent. He knows he compete with the Economy Chief in quality, price, skimmin in any other way, so after sputtering around a little he load his machine and drives away to look for someone who n heard of Sears, Roebuck and Co. and the Economy Chief.

How much better it is for you to buy your cream sepa from a strong, well established and reliable concern like S Roebuck and Co. who have thousands of things to sell be cream separators and who are bound to treat you fairly be they want to hold your trade and good will. A concern their own great factories who ask you only a small margin the actual factory cost, who put their claims and promise print, give you a guarantee that means something and prom return your money, including freight charges, if you are fully and completely satisfied.

REPAIRS AND REPAIRING

We have very little call for repairs for Economy Chief Cream Separators, as there are so few parts that ever give out in use that it is rarely a repair is needed.

Repairs are free if they come under the terms of our twenty-year binding guarantee, and they go to you with express charges prepaid so that you are not put to a penny of expense. If, however, it is necessary to replace a part giving out through natural wear or a part broken through accident which is not covered by our guarantee we charge you only about one-half as much as other makers would charge you for similar repairs.

We carry a complete stock of repairs for all Economy Separators, old and new, at Chicago and of course another stock at the factory, s addition we have a complete repair shop at Chicago where we are e ped to do bowl balancing, rebuilding and separator repairing of all

Our prices for both repairs and repair work are very low. Our shop is run at an actual loss for the benefit of our customers and repairs at just enough profit over the cost to cover the handling ex

We guarantee to furnish any needed repair for any Economy Se tor purchased from us, whether it is in one, five, ten or twenty from now or take back your machine and return the full purchase This guarantee relieves you of any anxiety on the question of repai

PULLEYS FOR POWER.

Friction Pulley. Solid Pulley.

We can furnish either a solid or a friction pulley for use with our Economy Chief Cream Separator when it is to be operated by a gasoline engine, animal or other power. These pulleys fit all sizes and are attached by simply removing the crank and replacing it with a pulley which is fastened on with a bolt the same as the crank. The pulley should revolve at the rate of sixty turns a minute and the belt should not be too tight.

We advise the use of the friction pulley, which enables you to start the separator slowly and bring the bowl up to the proper speed without strain on the gearing. If operated with a gasoline engine the best results can be obtained by using a countershaft with tight and loose pulleys.

No. 23A127 Solid Pulley to attach to crank shaft. Size, 12 inches in diameter and 2-inch face. Shipping weight, 22 pounds. Price $1.25

No. 23A128 Friction Pulley to attach to crank shaft. Size, 14 inches in diameter and 2-inch face. Shipping weight, 32 pounds. Price 2.25

If ordered with separator, pulleys will be shipped from Kansas City, Mo.

Rubber Bowl Rings.

No. 23A667 Rubber Bowl Rings to fit any size Improved Economy or Economy Chief Cream Separators. Price, per package of six rings. 37c
Shipping weight, 3 oz.
Per package of twelve rings 55c
Shipping weight, 5 oz.

We do not break packages. Directions for the care of rings printed on each package.

Cream Separator Supplies.

For prices on other supplies and repair Economy Cream Separators see direction furnished with the machine. If you have mislaid your direction booklet we will gladl you another one free of charge on request.

27.65 FOR THE GENUINE ECONOMY CHIEF CREAM SEPARATOR

hip from
as City,
Mo.,
ng small
it charges

SHIPPED FROM KANSAS CITY, MO.

This is our latest and best Economy Chief Separator in the small size. Capacity, 250 to 300 pounds or about 120 to 145 quarts of milk an hour. It skims any quantity from 1 gallon up and is adapted for a dairy of from two to four or five cows.

It has the new 1912 features and is built of the finest material throughout and with the same care and accuracy as our larger machines. The bowl is light and easily handled. It has but five parts, is 3 3-16 inches inside diameter and weighs only 7⅛ pounds. It has our famous purifying and cleansing features. Is practically self cleaning and is built of the finest wrought steel throughout. Equipped with the new double strength skimming cores.

The crank is but 9½ inches long. Just right for easy turning. The supply tank is at the most convenient height. Easy to fill yet up out of the way.

This is a wonderfully close skimmer of warm or cold milk. It is so easy to handle and run that a woman or fourteen-year old girl can skim the milk, clean and care for it without trouble or undue exertion.

It is strong and solid in construction, nothing to get out of order or give trouble. No fancy adjustments to make and the ideal separator for a small dairy.

We always recommend a larger size for any but a very small dairy, as the larger size is as easy to handle and care for and does the skimming so much quicker. However, if you have only two or three cows and never expect to increase your herd, this size will give you splendid satisfaction.

No. 23A21 New 1912 Economy Chief Cream Separator. Capacity, 250 to 300 pounds per hour. Shipping weight, 200 pounds. Price..... **$27.65**

34.90 LATEST AND BEST MODEL ECONOMY CHIEF CREAM SEPARATOR

ew 1912 Model Economy Chief in the medium Capacity, 350 to 400 pounds or 170 to 195 quarts ur.

$34.90 this size is a wonderful bargain. The omy Chief is the only separator sold at a fair quare price. Just a small margin over the cost to build in the largest and best equipped tor factory in the United States.

ur prices are far below what others ask for tors of the same size and capacity. We sell most liberal terms. Give the strongest guar- and longest trial offer ever heard of.

e Economy Chief is a wonderful skimmer. It practically every drop of cream and skims so easier and quicker than other machines that ifference will surprise you.

is size is equipped with our latest style wrought bowl with double strength cores. The bowl res but 3 3-16x6½ inches inside and weighs pounds. Length of crank is 9½ inches. The crank, light bowl and frictionless gearing make remarkably easy and it will give you splendid ction.

is size is best adapted for a dairy of five cows and could be made to do for a slightly larger but we strongly advise the purchase of the big ty Chief shown on the following page, which the skimming in one-half to two-thirds the of the smaller sizes, is no harder to handle and or and will always take care of an increase in herd.

ery Economy Chief is fully guaranteed by d sold subject to sixty days' trial on your arm. Shipped from Kansas City, Mo.

23A22 New 1912 Economy Chief Cream ator. Capacity, 350 to 400 per hour. Shipping weight, unds. Price..... **$34.90**

AGENTS' PRICE $65.00 TO $80.00

By shipping from **Kansas City, Mo.,** we make quick delivery certain

THE SIZE TO BUY

The large 600-pound per hour capacity Economy Chief Cream Separator is, for several very good reasons, the cheapest machine to buy, no matter whether your herd is a large or small one.

To begin with, the 600-pound per hour capacity Economy Chief will last twice as long, just twice as many years as the 300-pound per hour capacity machine, for the simple reason that it skims any quantity of milk in one-half the time.

A cream separator, like any other machine, is only worn as it is used and will run a certain number of days and a certain number of years before it will require repairs. As the big capacity machine does the skimming in one-half the time, naturally it will last twice as long and do twice the skimming before repairs will be needed.

Even at double the price of the small size machine it would pay you best to buy it, and it does not cost you anything like twice as much.

Consider also what your time is worth. In the spring when you are putting in your crops, every hour and almost every minute is worth big money to you. You cannot afford to waste your time or use it uselessly.

When you think that with the big 600-pound capacity Economy Chief you can save one-half the time needed to do the skimming twice every day in the year and save one-half the labor of turning the crank, you can easily see what a world of time and labor you will save in the course of a year.

The big machine runs practically as easy as the smaller ones; the difference in running is hardly noticeable. It is cleaned just as easily and just as quickly. It will require only one-half as much oil, as it is used only one-half as much, and, best of all, these big advantages that you get the benefit of every day in the year really cost you nothing, because the big capacity machine lasts twice as long and actually costs you less per year to use than the smaller machine.

Another reason: You will surely want to increase the size of your herd when you start to use the Economy Chief, because it makes the dairy work so light and easy that you can double the number of your cows and still have less work to do than you had before.

The big machine will always take care of an increase in the size of your herd and of the extra milk supply which you will have at certain seasons of the year.

Purely in your own interests we ask you to order the big 600-pound capacity Economy Chief described on the following page. No customer who has ever bought the big size has had reason to regret it, while many who have purchased the smaller sizes have found it to their advantage to increase their herds and buy the large machine later on.

Order the right size in the first place, the big 600-pound per hour Economy Chief and you will make a wise choice.

$42.35 FOR THE NEW 1912 MODEL ECONOMY CHIE CREAM SEPARATO

IN THE BIG FAST SKIMMING SIZE

THIS IS OUR BIGGEST AND BEST SIZE

The Most Popular Cream Separator We Have Ever Sold. The biggest selling separator on the market today, the greatest bargain we have to offer and the best value for your money. You can make no mistake in ordering this big fast skimming size on trial. About seven customers out of every ten are using it today.

All Say It Is the Best Investment they ever made. Everyone is charmed with the speed and ease with which it does the work, skimming the milk from a big herd of cows in almost no time.

This Big Economy Chief skims 600 pounds or about 300 quarts an hour, or at the rate of a milk pailful every two minutes, yet it is just as easy to clean and care for as the smaller sizes. Practically as easy running and always provides for an increase in the size of your herd in future years. It is the cheapest machine for you to buy in the long run. As it skims in one-half the time, it will last much longer than the smaller machines and saves time and labor every day in the year.

At $42.35, It Is a Splendid Bargain. This is just the cost to build in the largest and most complete separator factory in the world with a single small profit added. Our $42.35 price for a separator of 600 pounds per hour capacity is far below all attempted competition. Agents ask $80.00 to $100.00, and even as high as $125.00, for separators of this capacity which will not compare with the new Chief in any way.

We Save You $45.00 to $60.00 or more and give you a stronger and more substantial separator, one that will last longer and surpasses all others in closeness of skimming on warm or cold milk.

The New 1912 Model has all the great features that have made our previous models so popular with particular dairymen and many valuable improvements in addition. The new extra large capacity seamless supply tank, the new broad heavy base, the strong rigid new style frame, new sanitary bowl pot and extra large cream pan are all shown in this illustration. In addition, the big fast skimming Chief is equipped with the new double strength cores. It has the new quick removable lower bearing, the triple pinion shaft bearings and extra wide faced gears. The crank is only 9½ inches long and is at just the right height for comfort and ease in turning. The supply tank is low and easily filled, while the skim milk spout is high, permitting a big milk can to go under it easily.

The New Chief has many exclusive patented features, including the wonderful double opposed disc bowl that outskims all competition, the anti-reflex upper bearing, frictionless lower bearing and other features that rival manufacturers dare not copy and cannot furnish at any price.

BUILT AT A BIG SAVING

SAVED $500.00.

York, Neb.

Sears, Roebuck and Co., Chicago, Ill.

Gentlemen:—We were more than satisfied with everything we received, as we failed to find even a piece of poor material in the entire bill. We have saved fully $500.00 on this building, besides having better material than we could possibly have gotten at our home town. We were greatly surprised, too, at the manner and promptness in which our order was handled.

Very truly yours,
J. P. BERCK.

SAVED $1,000.00.

Cohoes, N. Y.

Sears, Roebuck and Co., Chicago, Ill.

Dear Sirs:—I am sending you a photograph of house built from materials shipped from you and according to your plans. I am pleased to say that I was pleased and satisfied with quality of materials and your prompt shipments. Your plans are a great help to anyone that wants to build. After a close estimate I can say that I have saved $1,000.00 on this property.

Very truly yours,
FRANK CHAMBERLAND.

SAVED $450.00.

No. 1037 East Ash Street, Salina.

Sears, Roebuck and Co., Chicago, Ill.

Gentlemen:—I am sending you a photograph of [illegible] house built with material ordered from you and [illegible] plans. I saved $450.00 and the material is better than [illegible] buy here.

Respectfully yours,
JNO. HOLZENB[illegible]

SAVED $200.00.

Grafton, Mass.

Sears, Roebuck and Co., Chicago, Ill.

Gentlemen:—The lumber and finishing material are much better than I could have gotten here. My contractor tells me that I have saved about $200.00 on the whole. I am living in the house this winter and like it very much and will say right here that Sears, Roebuck and Co. are perfectly fair and square and have done everything that they agreed to do.

Yours very truly,
D. S. CHASE.

BETTER THAN EXPECTED.

No. 107 South Sixth St., Fulton, N. Y.

Sears, Roebuck and Co., Chicago, Ill.

Gentlemen:—I was very much pleased with the building material bought of you. It was far better in every respect than I expected to get for the low price paid. The doors are fine; in fact, everything is the same. Everything came in good condition.

Yours respectfully,
I. S. JENNINGS.

QUITE A SAVING.

New Haven, Conn.

Sears, Roebuck and Co., Chicago, Ill.

Dear Sirs:—I am sending the photograph of our cozy Sears-Roebuck house. I bought all the material from your firm at quite a saving and I certainly advise our friends where to get their goods.

Very truly yours,
LOUIS STREITLEIN.

One Hundred Modern Homes and Ba[illegible]

MAILED FREE

RESIDENCES, BUNGALOWS, COTTAGES [illegible] FLAT BUILDINGS. BEAUTIFULLY ILLUSTRA[illegible]

FREE PLANS FOR ANY OF THEM.

In our Book of Modern Homes we illustrate over one hundred [illegible]ent styles of houses adapted for city dwellings, suburban homes, [illegible] houses, farm houses and barns, ranging in cost for building from [illegible] to $5,000.00. On this and the following page we show a few [illegible] many houses which have been built according to our plans a[illegible] material purchased from us.

Read what the builders of these houses say about the sav[illegible] made and the high quality of the material.

This book shows a number of beautiful illustrations in colo[illegible] living room, dining room, kitchen, bathrooms and bedrooms as [illegible] the exterior of a model home are all illustrated in full color. Other houses are illustrated with beautiful [illegible] with first and second floor plans in reduced size, with number of rooms, sizes, etc., plainly marked, and our co[illegible] the materials printed with each illustration. Remember, our costs are not guesswork. They are positively accur[illegible] prove them by giving you a typewritten bill of materials, specifying every item of building material, showing [illegible] for which we agree to furnish this material. The price at which we claim these houses can be built includes a[illegible] material. Don't break ground or sign a building contract before you get a copy of our Book of Modern Homes. [illegible] positively save you one-third or more in the cost of your home. You will get better results out of our buildi[illegible] which cost you nothing, than you will get out of building plans you pay other architects $100.00 or more for.

Whether you are a contractor and builder or intend to build your own home, you positively cannot afford to [illegible] this Book of Modern Homes. Write for it today.

OUR $100.00 BUILDING PLANS COST YOU NOTH[illegible]

Our $100.00 building plans for any of the houses shown on this page or any of over one hundred styles [illegible] illustrated in our free Book of Modern Homes described below will cost you nothing. If you intend building [illegible] of a house, be sure to write for our Book of Modern Homes. It will mean a saving to you of fully one-third [illegible] cost of your building. The original set of each one of these plans cost us from $100.00 to $150.00 per set [illegible] (but cost you nothing). The high grade materials we furnish at wholesale prices enable you to make such savi[illegible] following: **We save you $500.00 on a $1,500.00 house, $650.00 on a $2,000.00 house, $1,000.00 on a $3,000.0[illegible] $1,500.00 on a $4,500.00 house.** Such are the savings we make you on every house illustrated in our Book of Homes. The letters printed directly below the houses shown on this page will give you some idea of our ability [illegible] you all we claim. We are receiving letters every day from grateful customers telling of the high quality of the [illegible] received, of the big saving they made and thanking us for enabling them to put up homes at a reasonable cost.

Our building plans, specifications and bill of materials, which cost you nothing, as explained below, in[illegible] following:

1—A complete set of blue prints, with all details and dimensions plainly marked, drawn to the scale of one-quarter inch to the foot.

Front Elevation, showing the front view of the house.

Right Side Elevation, showing the right side view of the house.

Left Elevation, showing the left side view of the house.

Rear Elevation, giving a back view of the house.

Longitudinal Plans, showing cross section.

Foundation Plans, giving information with reference to excavation, foundation, etc.

First Floor Plans, with sizes of rooms, partitions, doorways, windows, etc., given in detail.

Second Floor Plans (if a two-story structure), giving size of rooms, partitions, location of windows, doors, etc., in detail.

Detailed Drawings of Materials, showing stair finish, balusters, style of window trimmings, hardware, porch finish, cornice finish, and all the material necessary to [illegible] and character to the structure inside and out.

2—Complete specifications of material and labor, [illegible] all the conditions under which a contract may be [illegible] abling you to protect your interests perfectly, if [illegible] be built by contract.

3—Complete bill of materials and labor, [illegible] quantity and dimensions of timbers required, [illegible] quantity and kind of exterior finishing lumber, [illegible] roofing, window and door frames, doors and win[illegible] finishing lumber, including all molding, stairs [illegible] building hardware, such as door locks, hinges, [illegible] catches, drawer pulls, sash locks, gutters and [illegible] glass, paints, varnishes and fillers for outside [illegible] painting. In addition to all these details, we [illegible] you on request, when we receive your order, [illegible] of charge, a complete set of heating plans and [illegible] plans.

Our plans are the work of the best known licensed architects specially engaged by us for this service. [illegible] investigated the requirements of home builders everywhere in the United States and have embodied in our plans [illegible] latest ideas of the best posted contractors and builders in this country, as well as the very best architects. [illegible] variety of houses specially adapted for city, town or farm homes. Ideas and suggestions impossible for you [illegible] eleswhere at any price.

Our Plans and Specifications Call For the Hig[illegible] Grade Materials and Labor

We specify the best grade of mill work, dimension lumber, hardware and paint, as well as the highest [illegible] manship throughout. Our estimates are accurate. We prove them by giving you exact figures on every item [illegible] you a typewritten bill of materials with our blue prints and specifications. We guarantee our prices on mill w[illegible] windows, doors, interior trim, flooring, siding, hardware, paint, mantels, plumbing and heating. On these [illegible] nearly one-half. We make a very liberal allowance for all labor such as carpentry, masonry, painting, excavating and plastering. The cost of it all is included in our estimate. Our estimates are absolutely reliable. [illegible] within a dollar or two the exact cost of your finished dwelling before you start to build. Write and get [illegible] Modern Homes at once.

YOU CAN DO THE SAME

SAVED $150.00.

2736 Meredith Ave., Omaha, Neb.

Roebuck and Co., Chicago, Ill.

Gentlemen:—I am sending photo of my new house built according to your plans and with material purchased from you. I cannot have been better satisfied as to the quality of the lumber, the promptness of the shipments and the way I was treated. I saved about 25 per cent on the material as compared with local prices. My carpenters said it was the best lot of lumber they had ever used.

Yours truly,
R. L. GILCHRIST.

"FIRST CLASS IN EVERY RESPECT."

No. 822 Baltimore St., Waterloo, Iowa.

Sears, Roebuck and Co., Chicago, Ill.

Gentlemen:—I am sending photo of my house, which looks fine, but the interior is finer. The material I bought from you was first-class in every respect and many contractors here, after seeing it, said the lumber and mill work could not possibly be duplicated here.

Very truly yours,
C. A. BARTELL.

SAVED OVER $1,000.00.

Dixon, Iowa.

Sears, Roebuck and Co., Chicago, Ill.

Gentlemen:—The lumber and mill work that I bought from your firm is satisfactory in every way. I saved from $1,000.00 to $1,200.00 on the house that I put up last summer.

Very truly yours,
CHAS. J. DAHMS.

The letters shown on these two pages are but a few of the many we receive from satisfied builders. When writing any of these people enclose a two-cent stamp for their reply.

NEVER SAW AS FINE OAK DOORS.

DOYLE SHEEP COMPANY,
Douglas, Wyo.

Roebuck and Co., Chicago, Ill.

Gentlemen:—The material I bought of you for house No. 132 was satisfactory in every way and especially the inside doors. I never saw as fine oak doors. Thanking you for your fair dealing, I am,

Yours respectfully,
G. N. DOYLE.

SAVED $225.00.

The above is a picture of our Modern Home No. 147, with some alterations, built at Mandan, N. D., by Mr. Arthur Witherow. He says: "The material was fine, and I could not wish better. I saved about $225.00 after paying freight."

SAVED $140.00.

Bay Shore, Long Island, N. Y.

Sears, Roebuck and Co., Chicago, Ill.

Dear Sirs:—I was very well pleased with the quality of material sent by you. The red oak trimming was the prettiest lot of mill work I ever saw, and the carpenters did not have to sand it or dress it in any way before using. Your columns were of the best, also your doors and sash cannot be excelled at twice the cost. I saved at least 30 per cent on the material.

Yours very truly,
S. J. SMITH.

Successful Building.

A Book Written By Our Customers.

If you will write and ask us for our Successful Building Book No. F6366, containing testimonial letters written to us by our customers, we will mail it to you at once, free and postpaid. It will give you facts you ought to know regarding the building and will explain how you can get $1.50 value for every $1.00 you spend. In our Building Material and Mill Work and in our Book of Modern Homes we show the big money savings we can make you on and building materials. We receive letters daily from every state in the Union telling us such as are shown on this page. Very likely the book illustrated above contains letters friends of yours in your own town, at least in your state. This book will give you conproof from the lips of our customers, as the letters published in it are from contractors, builders, professional men, farmers, mechanics and others who have sent us their These letters prove all our claims and will satisfy the most skeptical person. **Send today book. Ask for our Successful Building Book No. F6366.** It will explain to you the secret ing at a saving of fully one-third.

SAVED $800.00.

Roselle Park, N. J.

Sears, Roebuck and Co., Chicago, Ill.

Gentlemen:—Am very glad to say that whatever I purchased from you for my house, which I think amounted to $800.00 or $900.00, has been found to be very satisfactory. I know that I could not have obtained the some material here for less than about twice the amount, considering quality. I shall certainly favor you with as many orders as I can.

Wishing you continued success, I remain,

Your customer,
JOHN C. JOHNSON.

HE PICTURES reproduced on these two pages were made direct from photographs furnished by customers, who have lt with our materials and according to our plans.

* For other sizes see Mill Work Catalog.

TINTED AND GRAINED DOORS.

Our painted and grained doors are all made with bevel raised and O. G. sticking. Manufactured from low grade lumber, but no defects which seriously affect ing qualities. The doors are painted two coats and the grained doors two coats besides the coat, all painted by hand. Carried in stock in two grades, Standard Grade, which is the low ally furnished by other concerns, and the Special High Grade, which is a door very much bet- the average and which is sold and furnished by us only. We recommend the high grade door.

OUTSIDE DOOR FRAMES.

For other designs see Mill Work Catalog. Frame has a 1 1/8 x 1 3/8-inch drip cap; 1 1/8 x 4 1/2-inch outside casing; 1 3/8 x 5 3/4-inch jamb, rabbeted to suit thickness of door and a 1 3/4-inch oak sill. All good sound stock, allowing but few defects. The jamb is dadoed for sill but not for head, thus allowing carpenter to cut to fit smaller openings.

No. 63H7975 Plain Drip Cap Outside Door Frame, for frame buildings with 2x4 studding. Knocked down and carefully bundled for shipment. For door, 3 feet by 7 feet or smaller opening. Price.....$2.03

IMPORTANT. ALL DOORS, SASH AND MILL WORK IN THIS CATALOG SHIPPED FROM MILL WORK FACTORY IN EASTERN IOWA.

HOW TO ORDER WINDOW FRAMES, STORM SASH AND BLIN

from the tables below. The column of sizes under the heading, "Size of Glass," shows the size of glass in inches in the window and all prices on the same line in the other co refer to WINDOW FRAMES, STORM SASH and BLINDS to fit this particular size. For illustration, take a two-light window, glass size 24x28, price on a window glaze strength is 89 cents, price on a pulley frame for this size window $1.66 and the size of the sash opening of this same window is 2 feet 4½ inches by 5 feet 2 inches. The pri storm sash for this size window is 95 cents and for the blinds $1.20, weight of this window is 22 pounds, and if you wish to order sash weights, divide the entire weight of the w by four, which will give you the size of each of the four weights required to balance the window. The word "GLAZED" means "including glass."

Two-Light Window

Sash, 1⅜-inch Thick. Check Rail. Price Includes Glass Glazed in the Sash Held in Place by Putty. Price Includes Both Sash.

Window Frame, Including Pulleys

Jambs, 5¼ Inches, Including Blind Stop. Outside Casing, 1¼x4½ Inches. Plain Drip Cap. Sill, 1¾x7½ Inches.

Storm Sash

Ventilator 15c extra.

1⅛ in. Thick, About 1 Inch Wider and 1½ Inches Longer Than Window. Price Includes Glass Set in the Sash, Held in Place by Putty.

SASH WEIGHTS.

No. 63H7200 Sash Weights. To hang a window, four sash weights are required, each weighing one-fourth the weight of entire window. Our weights are standard diameter and length, according to weight. We ship sash weights from Chicago and two Eastern foundries, whichever foundry is nearest you. Sizes from 3 to 9 pounds by half pounds, sizes from 9 to 26 pounds by pounds. When ordering be sure to state sizes. Price, per pound 1½c

WINDOWS—Our windows are made of soft pine and glazed with a good grade of window glass. Very carefully packed.

FRAMES—We use better lumber in our frames than is used by most concerns. Our frames are unusually good. Shipped knocked down in bundles to save you freight.

STORM SASH—Made of soft wood and glazed with good window glass. Well packed for shipment.

BLINDS—Made of soft pine and very well constructed, made same width as windows, but 1 inch longer.

On this page we show only a part of this line. For other designs, etc., see our special Mill Work Catalog.

ALL MILL WORK ON THIS PAGE WILL BE SHIPPED DIRECT FROM FACTORY IN EASTERN IOWA.

Artistic Brick Mantels Enrich the Modern Home. Write for Mantel Catalog

No. 63H8261 Roof Cresting. Price, per 6-foot length, without post .....

HARDWOOD FLOORING

WE FURNISH ROYAL ACME FLOORING IN TWO GRADES

Our Clear Grade is free of knots and imperfections in manufacture. Furnished in random lengths from 2 to 16 feet inclusive. Not over 8 per cent of lengths 4 feet long and under. **Our Select Grade** is the kind most dealers sell as clear or high grade. This grade is not so clear as our clear grade, but will lay with but little waste and allows but few defects. Furnished in random lengths from 1½ to 16 feet inclusive. Oak and maple flooring is not sorted to color.

WHEN ORDERING, bear in mind that flooring with 2-inch face is figured as 2½ inches wide, and flooring with 2¼-inch face is figured as 3 inches wide; to allow for tongue and groove. When making up your order increase the amount about 30 per cent more than the actual measurement of the surface to be covered, also allow a few feet additional for waste. To illustrate: A room 10x12 feet equals 120 square feet. If flooring 2-inch face is ordered add 30 per cent (36 to 40 feet); order about 160 square feet. The same rules apply no matter from whom you buy your flooring.

ROYAL ACME OAK AND MAPLE FLOORING, the highest grade of flooring made. At these low prices anyone can afford to have the highest grade of maple, quarter sawed red oak or plain oak floor; prices are but little higher than the retail lumberman charges for common soft wood flooring.

STEEL POLISHED AND END MATCHED. Royal Acme Flooring in either oak or quarter sawed oak is scientifically treated, cured in kilns at a temperature of 212 degrees Fahrenheit. Every foot is steel polished, every piece is end matched. The ⅝-inch is hollow backed and bored for blind nailing. Shipped from Chicago factory or from our big lumber yards in Southern Illinois.

Hardwood flooring is shipped from our Chicago factory.

QUARTER SAWED RED OAK FLOORING.

$15.95 Buys This Elegant Colonnade and Grille.

Made of the same high grade material and careful workmanship as used in our higher priced grilles, the only difference being that it is not nearly so massive. Base of column opposite shelf 4½ inches in diameter; two-panel wainscoting measures 30 inches from top of shelf to the floor; columns formed by octagon, 6 inches in diameter; plain turned part, 4½ inches; fluted columns, 4 inches in diameter. Trimmed with genuine carved ornaments. Wainscoting measures 16 inches from the inside of post to jamb.

No. 63H8456 Colonnade and Grille for opening 8 feet wide by 8 feet 6 inches high or less furnished in oak, birch, yellow pine or cypress (in the white). Price $15.95

If filled, shellaced and varnished, add $4.25 extra. For grilles larger than the above mentioned size, add for each additional foot or fraction thereof $1.50. Shipping weight, 150 pounds.

The Price Quoted Does Not Include Casing, Jambs, Base Blocks nor Cap Trim.

GRILLES AND COLONNADES ON THIS PAGE

we show three of the latest and best selling patterns of Grilles and Colonnades. Choose any one of them. All are wonderful values. Designs and finish are sure to please you, but if you want a bigger line to select from, then send for our Special Building Material and Mill Work Catalog, which shows our big complete line of about fifteen different styles.

All Grilles under 4 feet will be charged as if 4 feet long.

If Grille No. 63H8436 is wanted finished, that is, shellaced and varnished, add 15 cents per lineal foot to the price in the white and write the word "finished" after the catalog number. To insure a perfect match to your woodwork, state whether light or dark finish is wanted and, if possible, enclose a sample showing the grain and color.

Extends down 10 inches at ends.

No. 63H8436

Made in oak, birch, yellow pine or cypress (in the white). Price, per lineal foot 60c

GRILLES AND COLONNADES are made special to your order. When ordering be sure to plainly state the exact size of the opening, also state whether **oak, birch, yellow pine** or **cypress** is wanted. We ship grilles finished, that is, filled and varnished, when so ordered, at the additional price printed on this page. Not oiled or varnished unless specified.

A $35.00 Colonnade for $17.50.

Made of the finest selected material by the highest class maker. Columns made with special lock joint, all joints mitered, smoothed and sanded by hand. Octagon base of 7¾ inches in diameter opposite panels; base at floor, 9½ inches in diameter; caps at top of column, 10 inches in diameter; above pedestal, 6 inches at the base, tapering to 5 inches top; panel work between column and casing, 16 inches; panel 30 inches above floor line; columns ornamented by three composition caps.

No. 63H8400 Colonnade includes two columns, pedestals and panel wainscoting for opening 8 feet 6 inches high or less, furnished in **oak, birch, yellow pine or cypress** (in the white). Price, per pair .....

If shellaced and varnished, add $4.00 to the above price. Shipping weight, per pair, 200 pounds.

The Price Quoted Does Not Include Casing, Jambs, Base Blocks nor Cap Trim.

If You Are Going to Build a House or Do Considerable Building Send For This Catalog. Mailed Free on Request

MANY NEW LINES ADDED. This catalog shows a big line of the latest designs of Craftsman and Mission doors with a complete line of trim to match, built-in china closets, casement sash, hardwood flooring, etc.

JUST ONE LOOK INSIDE THIS CATALOG will convince you beyond a doubt that we save you nearly one-half on everything in building line. Brimful of new suggestions and ideas for anyone thinking of building. Every carpenter, contractor, in fact, any one interested in the building trade, should have a copy of this book.

THIS SPLENDID CATALOG explains how we guarantee the quality of every item we offer be strictly as represented, and absolutely the best on the market as well as quotes the lowest prices ever named; how we guarantee delivery of all mill work in perfect condition or make good anything damaged or broken in transit; how we deliver our goods perfectly clean, bright and free from marks, stains, etc. In the pages preceding this we illustrate a large selection of our mill work building materials, although necessarily we are obliged to show the illustrations small to avoid taking too much space. If you are in a hurry to place your order and cannot wait until you receive our Mill Work Catalog, don't hesitate to order direct from these pages as they show a big and well assorted line of mill work and building materials at our lowest prices.

CONTRACTORS, CARPENTERS AND BUILDERS, be sure to get this Special Catalog of Building Material and Mill Work. You cannot afford to be without it. You can rely on it for your entire supply of building materials. There is no source of supply so complete for you, there is no one else that can offer you a finer quality, a larger line, more up to date designs and none that can deliver building materials so promptly and in such excellent condition. Remember, it contains everything you need. (See our list below). Everything is illustrated in beautiful, clear, sharp halftone engravings or in colors, and we absolutely guarantee everything to be just as described. This catalog will enable you to make lower prices on bids competition. It will secure for you many contracts that you could not otherwise secure. If competition is not so sharp, it will enable you to make a larger profit. Our control of the supply, immense factory facilities and direct from factory shipments put our prices below all competition.

Simplex Ready Made OR Portable Buildings

$195.00
Size, 16x20 Feet. Three Rooms.

SIMPLE, STRONG AND ECONOMICAL. We handle a complete line of portable buildings, garages, chicken houses, photograph galleries and cottages of many sizes, from one room to five rooms, all of which are attractively designed and made in such large ies that you could hardly buy the material necessary to build one of them for the price we quote you on the te house, ready to bolt together.

IPLEX HOUSES ARE PORTABLE. They can be taken apart as readily as they are put together. Ideal for e or summer resorts. Anyone owning a Simplex Portable Building can move it from one place to another at no expense or store it for future use. Sections are interchangeable, making it possible to lengthen the house time by adding other sections.

RONG AND STURDY enough for any purpose. Many Simplex houses are being used by homesteaders in the nd Northwest for farm houses. They can easily be made warm enough for the most severe weather by lining eerless Wall Board shown below.

Y OUR PRICES ARE SO LOW. The cost of a portable building depends on the cost of lumber, as half of the cost is in this one item alone. We manufacture our own lumber from our own logs in our big Southern mills. rtable building factory is operated in connection with our **big 40-acre** lumber yard in Southern Illinois. e independent of the lumber trust and our method of "from stump to consumer" saves you the jobbers' profit, the wholesale dealers' profit and the retail dealers' profit. We make you a further saving by manufacturing our Simplex Portable Buildings in large quantities at our new modernly equipped factory. All this saving goes to the customer buying a Simplex Portable Building in the way of lowering the price and bettering the quality. Shipped from factory in Southern Illinois. We carry a full assortment in stock ready for instant delivery. We can fill your order within five days. Our houses can be put up ready to live in within a few hours. No saws or plane or other tools necessary. The only tools required are a wrench, hammer and screwdriver.

$155.00 GARAGE.
Size, 16x18 Feet.

$399.00
Size, 26x30 Feet. Five Rooms.

Our Catalog of Portable Buildings is free. Send for it today if interested.

PEERLESS WALL BOARD AS A SUBSTITUTE FOR LATH AND PLASTER HAS NO EQUAL.

The picture to the left shows how simple and easy it is to apply wall board; simply order in the lengths required, it being best to order lengths which reach from the floor to the ceiling and also lengths which will reach from one side of the room to the other for the ceiling. Nail the wall board to the studding and joists with 6-penny wire nails. Use finishing nails if you intend to cover your walls and ceiling with wall paper, and flat head nails when you use molding or casing over the joints. When the last sheet is applied room is ready for occupancy.

Peerless Wall Board is now being used in buildings of all descriptions, including residences, homes, cottages, factories and office buildings, garages, portable houses and even in barns and chicken houses. For repair work it cannot be beaten. It will enable you to finish your garret, changing it from an unsightly storeroom to a valuable extra room. It will also enable you to divide large rooms into smaller rooms at little expense without having the annoyance of lathers and plasterers and without the muss and dirt that is inevitable when the old fashioned plastering is done.

Most pleasing and satisfactory results can be had by using Peerless Wall Board with panel work, as shown in the lower illustration. When applied in this manner all cracks or joints are concealed by molding, and it can be painted or kalsomined with good results. If Peerless Wall Board is used with wall paper, fill joints where the sheets come together with Peerless putty, then shellac the joints. One pound of Peerless putty is necessary for each 150 lineal feet of joint. From 1 to 2 pints of shellac are sufficient to cover all joints in an ordinary house.

The illustration above shows the actual thickness of Peerless Wall Board. It shows how the three plies of heavy fiber board are cemented together into one solid piece with two heavy layers of refined asphalt.

PEERLESS WALL BOARD is carefully packed in wood crates, thus insuring our customers of receiving it in perfect, clean condition. Shipped direct from Chicago factory.

BLUE PLASTER BOARD SHIPPED FROM KANSAS CITY, MO.

A STRONG LIGHT WEIGHT CARDBOARD TO BE USED AS A SUBSTITUTE FOR LATH AND PLASTER.

Less than ¼ cent a square foot for our Fulton Brand Blue Plaster Board. This material is being used very extensively in camps, cottages, bungalows, etc., as a cheap substitute for lath and plaster. Wall paper may be used over it, or by covering the seams with one-half round molding a very neat paneled effect may be had. See illustration.

Fulton Brand Blue Plaster Board is light weight cardboard, less than 1-16 of an inch in thickness, made only in AA grade from carefully selected stock and makes a sheet strong and durable. In color it is a pleasing shade of blue, and where the one-half round molding (used for covering the seams) is painted white, the color combination of the Blue Plaster Board and the white molding is very pleasing. It is put on with an ordinary billposter's tack; or any large headed tack will do. If Blue Plaster Board is to be covered with wall paper, we recommend that a narrow strip of cheese cloth be pasted over all joints. This prevents the wall paper from cracking at the seams after it becomes dry. For sheathing purposes it would be hard to obtain a stronger or tougher material for the purpose than our Fulton Brand Blue Plaster Board.

Blue Plaster Board is shipped direct from Kansas City, Mo.

GRAVEL BURLAP ROOFING

A ROOFING OF THE FIRS QUALITY

Hailproof. Needs No Coating. Fireproof.

GRAVEL BURLAP ROOFING is just what the name implies, roofing made of wool felt as a base, burlap center, asphalt and gravel surface. The wool felt and burlap center are thoroughly saturated with asphalt at a temperature of 325 degrees Fahrenheit and formed into one solid piece, then heavily coated with a thick layer of asphalt compound and gravel coated with washed lake pebbles.

AN IDEAL ROOFING FOR LAYING OVER SHINGLES, because it is heavier and has a stiffness not found in other makes of roofing. The burlap gives added strength and equalizes contraction and expansion caused by sudden and extreme changes in temperature. It is the heaviest prepared roofing made and is sold in one weight (one thickness) only. Weight, 85 pounds, hence is warmer in winter and cooler in summer than shingles, slate, steel or other prepared roofings.

WE FURNISH FREE with every roll sufficient large headed galvanized nails and cement, and full and complete directions for laying. Anyone can lay it. No experience required. The only tools required are a common jackknife and a hammer.

CAN BE LAID IN ONE-FOURTH THE TIME it takes to lay shingles and at a total cost of less than one-half the cost of the common-est grades of wood shingles.

GRAVEL BURLAP ROOFING IS HAILPROOF because made of strong burlap cloth center, making it sufficiently strong to withstand sleet, snow and the heaviest downpour of rain. It never needs coating or painting. The exposed surface is heavily covered with a thick layer of asphalt compound, further protected with gravel. As a result it will wear ten years without cost of repairing. While a trifle more expensive to commence with, it is cheapest in the end and when once laid your roofing troubles cease.

SUITABLE FOR ANY PITCH OF ROOF. It can be used on any kind or style of roof, "from a mansion to a henhouse." It is being extensively laid on buildings for stores, offices, factories and warehouses which are located in districts where flying embers are a menace to the average roofs, or in localities where steel roofs have been considered the only fire protection. Can be laid on roofs of the slightest pitch (nearly flat) because it is made with a 2-inch border free of gravel permitting a tightly cemented and waterproof seam.

FURNISHED IN ROLLS CONTAINING 108 SQUARE FEET, Covering surface 100 square feet. Price includes all necessary large headed galvanized nails and waterproof seam cement, and full directions for laying.

PRICE FOR GRAVEL BURLAP ROOFING.

47c A Roll

ANYONE CAN APPLY IT.

75c A Roll

Duck Brand Ready Roofing is THE BEST two and three-ply prepared TARRED FELT ROOFING MADE, regardless of price. Every ounce of material used in this roofing has waterproof qualities and does not contain clay or other cheap mineral substances which are often used by many manufacturers who aim to get weight (heavier rolls), but who care little or nothing about the wearing quality. We recommend this tar roofing only to those who are looking for a low cost roofing to last but a year or two. Where longer wear is desired buy Asphalt or Best-of-all roofing shown on pages 1155 and 1156.

Compare the prices and the quality of our tarred felt roofing with any other make or kind of tarred felt roofing and remember if we do not save you money and give you better roofing, you may return it at our expense and we will immediately return your money, together with any transportation charges you have paid. Shipped from our Chicago factory, or from our Chicago store if ordered with other merchandise. 108 square feet to the roll.

Catalog No.	Grade	Thickness	Weight	Price, per Roll
63A3102	Medium	Two-Ply	40 pounds	47c
63A3103	Heavy	Three-Ply	60 pounds	75c

The above prices on Duck Brand Prepared Tarred Felt Roofing do not include caps, nails or coating. For each roll of 108 square feet you should order extra 1 pound tin caps, 1 pound roofing nails and 1½ to 2 gallons of roof coating. Each roll is 32 inches wide.

We specially recommend our Best-of-all, Oriental Slate Surfaced or Flint Surfaced Asphalt Felt Roofing to those who desire a roofing which will last as long as ship

DUCK BRAND READY ROOF COATING for coating tarred felt roofs. Distilled from low heat, run American coal tar, and is more durable and far superior to coatings made from common kind of tar. The coating is the life of any tarred felt roof, keeps it pliable, avoiding cracking in extremely cold weather and protecting the felt from the sun and the wear of storms and rain. Do not try to economize by not putting coats of Duck Brand Ready Roof Coating on your tarred felt roof. Do not wait until roof leaks or is in bad shape before renewing the coating. Afterward apply a coat of Ready Roof Coating every two or three years. Requires 2 gallons to a square. Shipped from Chicago factory or from Chicago store when ordered with other merchandise.

TARRED FELT.

Used for Roofing, Sheathing or General Building Purposes.

TARRED FELT is the best kind of building paper. Architects specify and recommend it in the construction of a first class building. It is also used for gravel roofs. Tarred Felt is made of carefully selected wool paper felt, thoroughly saturated with redistilled low heat American coal tar.

THIS FELT is used extensively for roofing sheds and temporary buildings. It is still used in roofing large buildings where the specifications require about three to five layers of tarred felt, each layer of which is thoroughly coated with pitch or our Duck Brand Ready Roof Coating. After the several layers of tarred felt have been laid, they are then covered to the depth of an inch or more with sand and gravel. We recommend No. 1 Tarred Felt for all first class jobs. It makes an excellent deadening felt and should be used between all floors where a good job is wanted. As a sheathing paper for putting under weatherboard it has no equal.

No. 2 TARRED FELT. This grade of tarred felt is also used for gravel roofing where several layers are specified. It can be used in any place where the No. 1 grade is used, but it is lighter weight (not so thick), and where a medium grade of work is required a No. 2 Tarred Felt will be found very satisfactory.

No. 3 TARRED FELT. This grade of felt is made with the same care as the two heavier grades, but is lighter in weight and much thinner.

Shipped from our Chicago store.

RED ROSIN SIZED BUILDING PAPER.

34 CENTS Per Roll. **FOR SHEATHING PURPOSES.**

OUR PRICES are extremely low for this high grade building paper. Many of the largest contractors throughout this broad country are continually sending us orders for large quantities of this paper. Do not overlook the economy of properly lining your building with plenty of this high grade paper. It will save its first cost during the first winter, due to the reduction in your fuel bills, to say nothing of the added comfort to your home.

Red Rosin Sized Building Paper is made with a filled paper for a body and is faced on both sides with a well calendered stock that is thoroughly rosin sized, rendering it dampproof and vermin proof. We sell four different weights of this paper. We recommend for ordinary building purposes our Leader Brand, as it is of sufficient thickness to give entire satisfaction.

Our Fulton Brand is made with exactly the same stock, but is considerably heavier than our Leader Brand and there is no better or heavier Red Rosin Sized Paper made by any other concern.

Our Acme Brand is the same quality as our Leader excepting that it is a lighter weight.

Our Competition Brand is a fair grade, similar to the kind sold throughout this country. It is light in weight, as it runs only 4 pounds to the square.

Shipped from Kansas City, Mo.

ROOFING PITCH.

A GENUINE straight run American tar roofing pitch, the best grade of roofing pitch that we obtain. We have a large sale among builders and contractors on this material in a solid state and requires melting to the proper consistency for gravel roof use. Especially used for tarred felt roofs. Foundations below the ground are waterproof after being heavily coated with this roofing pitch. We do not sell in full barrels which weigh 300, 350 pounds. Shipped from Chicago factory.

No. 63A3056 Roofing Pitch. Price, per 100 pounds.....

Competition Brand Blue Plaster Board

We have an occasional call for a cheaper grade of Blue Plaster Board and while we do not recommend the use of this grade material, we can furnish it. This "B" grade Blue Plaster Board is not finished as well, is not as tough and strong as our "AA" grade Fulton Brand Blue Plaster Board shown on page 1158, and for the difference in price we by all means recommend that you buy our Fulton "AA" grade Blue Plaster Board. Shipped from our Chicago store.

Homan Brand Wool Deadening F

DEADENING FELT is used to deaden the sound between floors and in walls. It is made of a good grade of wool felt, soft and pliable, and will add much to the warmth of your building. Homan Brand Deadening Felt should be under every floor. The price of this material is so low that you cannot afford to put up a building without liberal use of it.

Shipped from our Chicago

Rubber Roofing — Flint Sand Coated Roofing

e Offer Under
Trade Name of

Composition Rubber Roofing

e "rubber" referred to in the description of this roofing is merely the trade name for a mineral substance
oks like rubber and feels like rubber, but, unlike rubber, it will never rot and is not affected by moisture.

r the BEST rubber finished
ng made see Best-of-all Roofing
age 1156.

guarantee these prices to be far below
thers charge for the very same roofing
they sell under various trade names.

y not buy the best roofing, such as
al Slate Surfaced, Best-of-all or
Surfaced Asphalt Roofing? The
named roofings will wear many
longer than Composition Roofing
her makes and the price of these
grade fully guaranteed roofings is
a little higher than the cheaper
. However, if you want a cheap
to last a short time, then buy
Composition Roofing.

Composition Roofing is sold by us for the purpose of meeting the demand of those who want ready roofing because it is low in price and who are not so particular about its wearing qualities. While this roofing is widely advertised by its manufacturer under various names to wear from five to ten years, we hesitate to recommend or guarantee it for this period because it contains low grade asphalts and crude oil which, according to best authorities, lack the wearing qualities such as are found in our Best-of-all Roofing, page 1156, and Flint Surfaced Asphalt Roofing shown at bottom of this page.

OUR POLICY. Roofing which is recommended to wear a given time as printed in connection with our prices is backed by our binding guarantee; **IF IT DOES NOT LAST THE FULL LENGTH OF TIME WE CLAIM IT SHOULD WEAR, WE WILL REPLACE IT BY FURNISHING NEW ROOFING.** We can make no claims as to the length of time Composition Roofing will wear, but believe that it is a remarkably good bargain at the prices we quote here. We would, however, advise you to be careful in selecting your roofing, or you may buy this very same make of roofing and pay double our prices for it. Composition Roofing is made of standard felt, saturated with an asphaltic composition and is finished on one side with a smooth mineral asphalt coating and on the other side coated with fine sand. This roofing may be used with either side up, according to the wishes of the purchaser.

Composition Roofing is shipped direct from Kansas City, Mo. Composition Roofing is made 32 inches wide and is put up in rolls containing 108 square feet, or enough material to cover a square of 100 square feet, furnished complete with nails and cement inside the rolls.

The BEST flint surfaced roofing made is listed below.

FLINT SURFACED ASPHALT ROOFING

5¢ PER ROLL

Heavier by a Half Ply Than Other Flint Surfaced Asphalt Roofing.

Our Flint Surfaced Asphalt Roofing is heavily surfaced on both sides with clean flint sand, adding much to its fireproof qualities. Being flint sanded on the under side as well as on the top side makes it especially fireproof, because flying embers or coals are not likely to set it on fire from the top, while the same coating of flint sand on the under side acts as a resistance against fire from the inside of the building. Flint Surfaced Asphalt Roofing is 32 inches wide. It is guaranteed to be made from a long fiber pure wool felt and saturated with the highest grade of asphalts and double coated with highest grade pure mineral asphalt. It is absolutely free from animal oil and is guaranteed not to melt or run in summer, or crack or break in winter. It is the best fire resisting asphalt roofing on the market.

This is an asphalt roofing; there is positively no coal tar used in its manufacture. This fact alone helps to make it fireproof and the waterproofing qualities of our coating give it a good heavy body, making it very strong and flexible. We absolutely guarantee our Flint Surfaced Asphalt Roofing to be the heaviest sanded asphalt roofing ever made.

Please compare the thickness, weight, strength and quality of materials used in our Flint Surfaced Asphalt Roofing with other makes of flint coated roofing and the result will be that you will order from us.

Made of the same high grades of wool felt and asphalts that are used in our celebrated Best-of-all Roofing described on page 1156.

Flint Surfaced Asphalt Roofing Requires No Coating When First Put On the Building.

3½-PLY ROOFING specified by architects for the higher class of buildings such as residences, schoolhouses, factory buildings or wherever a high class, long wearing roofing is required. Will wear 12 years.

2½-PLY ROOFING. Used on residences, barns, public buildings and if not abused will wear 9 years.

1½-PLY ROOFING. Used on buildings of every description and with good care will last 7 years.

1-PLY ROOFING is intended for use on temporary buildings, sheds, etc., and will last 5 years.

We furnish free with every roll of our Flint Surfaced Asphalt Roofing plenty of large headed galvanized barbed roofing nails and sufficient cement, with all necessary directions for laying. We use large headed galvanized nails in place of tin caps because they more firmly secure the roofing and do not rust out as tin caps do.

Quicker delivery and lower freight charges are assured by shipping direct from our warehouse in Kansas City, Mo.

BEST-OF-ALL ROOFING

SHIPPED FROM KANSAS CITY MO.

FROM FACTORY DOOR TO YOU

THICKEST, HEAVIEST AND MOST DURABLE SMOOTH FINISHED ROOFING MADE

Don't Buy Roofing From Anybody Without First Making These Tests.

PLEASE COMPARE:

1. **THICKNESS—Best-of-all is from 10 to 15 per cent thicker.**
2. **WEIGHT—Weighs from 10 to 15 per cent heavier.**
3. **FLEXIBILITY AND STRENGTH—Ours exceeds others by 25 per cent actual test.**
4. **QUALITY—We use pure asphalts and long fiber felts. You won't find tar or oil in this roofing.**

After you make these four tests there can be but one result. Whether it be for house or barn you will buy Best-of-all Roofing. There is no doubt about Best-of-all wearing longest.

The Four Tests, simple as they may seem, tell the difference between good and bad roofing. When buying Best-of-all Roofing **You Can't Go Wrong. We Guarantee Every Roll.** If you are not satisfied we will return your money as cheerfully as we accept your order; you simply take no risk whatever.

In our Best-of-all Roofing we offer you roofing that will outwear tin, tar or gravel roofing and has stood the test in all climates from Alaska to the Gulf of Mexico. A weatherproof and fire-resisting roofing that looks like rubber, feels like rubber and wears like iron. It is made of heavy, strong, long fibered wool felt, saturated with the best grades of asphalt. Best-of-all Roofing is elastic, pliable and tough, not affected by changes in climate, vapors, steam or gas and will not rust. Unlike most other kinds of prepared roofing, it is free from odor and will not discolor rain water; it can be used on either steep or flat roofs. Anyone can lay it, the only tools required being a knife and a hammer. **Sample mailed free on request.**

A roofing that is **Heavier, Thicker and Stronger** than any standard make.

It is a Proven Fact that prepared roofing of good quality like Best-of-all will outwear shingles. Here's your chance to buy it at a fraction of their cost.

We buy every ingredient that enters into the manufacture of Best-of-all Roofing, and we buy only the best. The best pure wool felt and best grade of asphalt only are used. Then, not being satisfied with buying the best, we analyze every ingredient thoroughly before we use it, so that we can feel satisfied that positively everything going into the makeup of this roofing is the best. These precautions, together with the use of only the latest improved machinery, skilled workmen and manufacturing every roll in our own factory, result in Best-of-all Roofing, positively the best roofing made, regardless of cost.

To reduce your freight charges and to avoid delays in transit we will ship your order from

$2.25 PER ROLL ORIENTAL SLATE SURFACED ROOFING

FURNISHED IN TWO COLORS, RED AND GREENISH GRAY. GUARANTEED TO WEAR TWELVE YEARS. COLORS WILL NOT FADE.

ORIENTAL SLATE SURFACED ROOFING is the most beautiful roofing made. Its color is permanent. Fine enough for the most expensive residence, yet low enough in price for the most humble cottage. Made from a long fiber pure wool felt, saturated with an asphalt composition and heavily coated with hard asphalt in which the crushed slate is thoroughly embedded. We guarantee the high quality of every ingredient used in making this roofing. It positively needs no coating nor attention after it is laid. It is fire resisting and for this reason makes an excellent roofing for buildings near factories, foundries, etc., as it will not catch fire from flying embers.

It is furnished in two colors, red and greenish gray. These colors are permanent, as they are the natural colors of the slate just as it is quarried.

MAKES A BEAUTIFUL ROOF. Red Slate Surfaced Roofing is a dull rich red and makes a beautiful roof for any building.

FOR SIDING OF HOUSES AND OTHER STRUCTURES IT CAN'T BE BEAT. Gray Slate Surfaced Roofing is a greenish gray color, having just a slight tinge of green. This roofing makes an excellent siding when battens are used over the joints and cannot be distinguished from stucco or cement. Used as a roofing and siding with very pleasing effects.

Here's a chance to reduce the cost of your building, adding to its beauty, reducing its cost of upkeep, as no painting is ever required and with the satisfaction of knowing that it will wear equally as long as wood siding. We recommend using Red and Gray Slate Roofing together, the red for roofing and the greenish gray for siding, as pretty a color combination as can be had and you have the satisfaction of knowing that the colors are permanent and that neither roofing nor siding need be touched for at least twelve years. **Anyone can lay it. Complete directions go with every roll.**

By using Oriental Roofing you save $62.25 on an average roof of 16 squares. Roofing and labor amount to $44.00. Shingles and cost of laying shingles amount to $106.25, a clear saving of $62.25, and you have a roof that is guaranteed to wear twelve years without any attention whatever, which is worth more to you than the saving.

WE FURNISH FREE with every roll large headed galvanized roofing nails and plenty of cement for lapping seams or joints. Note that we furnish a **galvanized nail** with large head which costs 100 per cent more than the old style roofing or shingle nails and tin caps. We know that a good roof depends on its being firmly secured to the roof boards. Galvanized nails will never rust, hence will last for many years.

Price of Red and Greenish Gray Slate Surfaced Roofing.

TO REDUCE YOUR FREIGHT CHARGES AND TO AVOID DELAYS IN TRANSIT, we will ship your order from Kansas City, Mo.

SAMPLES WILL BE MAILED FREE ON REQUEST.

RIENTAL ASPHALT SHINGLES

FURNISHED IN RED, GREENISH GRAY AND GRAVEL BROWN.

ILL NEVER CHANGE COLOR. Oriental Asphalt Shingles retain their rich color always, because they are surfaced with real red or greenish gray slate in their natural colors or with washed midget lake gravel which is brown in color. Absolutely no paint or artificial color used in making shingles.

ARANTEED TO OUTWEAR WOOD SHINGLES. Oriental Asphalt will outwear wood shingles, because they are waterproofed clear The crushed slate not only furnishes the never fading color but is al wearing surface of the roof.

EQUIRE NO ATTENTION AFTER BEING LAID. WE GUARANTEE SHINGLES TO WEAR TWELVE YEARS WITHOUT PAINTING ATTENTION WHATEVER.

L SHINGLES ARE OF UNIFORM SIZE, 8x12¾ inches. Unlike wood there are no culls to be thrown away; every shingle being of size there is no labor wasted in selecting the proper size shingles proper place. Oriental Shingles can be laid with less labor than shingles, and after they are laid have the appearance of slate shingles. al Asphalt Shingles should be laid 4 inches to the and ½ inch apart.

Guarantee These Shingles to Wear Twelve Years.

ASPHALT PLAIN CUT SHINGLES are packed in each bundle containing enough shingles to cover feet when laid 4 inches to the weather and ½ apart: 425 shingles will lay one square or 100 feet. 425 Asphalt Shingles will cover as much surface 100 wood shingles laid 4 inches to the weather. al Shingles can be laid on the same sheathing as shingles, even if roof boards are from 1 to 2 inches Shipped from factory in Chicago.

EXTRA HEAVY STEEL ROOFING AND SIDING U. S. Standard Weig

Steel is an excellent material for roofing, siding, ceiling, etc., on account of its being a strictly fireproof material. Easily applied, no experience being needed. Can be laid at a small cost for labor on any kind of a roof. Can also be laid over old shingles.

PRESSED CORRUGATED STEEL. Extra strong on account of its corrugations. Can be applied directly to studdings or rafters without sheathing. Extensively used for roofing, siding and ceiling in factories, stores, fireproof buildings, grain elevators, etc.

WE FURNISH TWO THICKNESSES. United States Standard 28-Gauge, is known the country over as st weight and thickness, and United States Standard 26-gauge, which we describe as EXTRA H and which is fully 20 per cent or one-fifth heavier than standard 28-gauge. We recomm 26-gauge in preference to the standard weight as it costs but a trifle more, costs no more to l gives nearly double the wear.

2½-INCH CORRUGATED SHEETS are furnished in sheets which actually measure 26 inches wide, but have a covering width of only 24 inches on account of the side lap. When ordering, allow from 4 to 6 inches for end laps depending upon the pitch or slant of the roof. If used for siding, a 2-inch end lap is sufficient. When ordering by the square be sure to order 108½ square feet to cover 100 square feet, not including the end laps. Shipped to you direct from steel mills in Central Ohio. We ship the 28-guage from Kansas City, Mo., also.

BE WISE!
Order our extra heavy grade (26-gauge). Costs about 10 per cent more. It is fully 20 per cent thicker and 20 per cent heavier but costs no more to lay and wears nearly twice as long. It costs a trifle more at first but it is the cheapest in the end.

1¼-INCH CORRUGATED SHEETS are furnished in sheets which actually measure 25 inches in width, but have a covering width of only 24 inches on account of side lap. When ordering, allow from 4 to 6 inches for end lap, depending upon the pitch or slant of the roof. If used for siding, 2-inch end laps are sufficient. When ordering by the square, be sure to order 104⅓ square feet to cover 100 square feet, not including end laps. Shipped to you direct fr mills in Central Ohio.

Made in U. S. Standard Grade (28-Gauge) and Extra Heavy Grade (26-Gauge)

TWO-V AND THREE-V CRIMP STEEL ROOFING

Made in U. S. Standard Grade (28-G and Extra Heavy Grade (26-Gaug

V Crimp Roofing can be used on any roof having more than 2 inches fall to the foot.

TWO-V Crimp Steel Roofing has a covering width of 24 inches after lapping one crimp over the other. It can be put directly on the rafters which should be placed 24 inches from center to center and the V wood strips nailed on the top surface of the rafter. Put a crosspiece between the rafters wherever there is a joint or lap. This roofing should be well coated with paint under the lap and nailed down to the crosspiece between the rafters.

Requires no soldering and folding or hammering of seams or joints; anyone who has ordinary mechanical ability can put it on.

THREE-V Crimp Steel Roofing has a covering width of 24 inches from center to center of two outside crimps. The center crimp adds much to the strength of the sheet as it stiffens the iron and prevents the sheets from rattling. Three-V Crimp Steel Roofing can be laid over old shingles or on smooth surface where you can place a wood V strip to support the center crimp. On a new roof it is only necessary to place sheathing boards every 2 feet, this being close enough to allow the V strips to properly support and strengthen the center of the sheets.

essed Steel Brick and Stone Siding, Steel Ceilings, Etc.

PRESSED BRICK STEEL SIDING.

Size of Single Brick, 2 4-5x8½ inches. Sheets, 60x28 inches.

22c PER SHEET PAINTED, OR **40c** PER SHEET GALVANIZED. Warranted Full 28-Gauge.

Pressed Brick Steel Siding after painting can hardly be distinguished from pressed brick. The sheets should be painted a brick color and striped for the mortar lines, which can be done after it is put on the building. This material costs less than wood siding and less than one-fourth the present price of brick. Sold only in full painted red or galvanized as quoted below.

Brick Steel Siding is shipped direct from the steel mill of Ohio. A square consists of 8 4-7 sheets. Weight, painted, 78 pounds per square; galvanized, 78 pounds per square.

PRICE, PER SQUARE.	
PAINTED	$1.85
GALVANIZED	3.35

OUR SPECIAL FREE STEEL CEILING CATALOG

shows a complete line of up to date designs of highest class metal ceilings including heavy embossed Colonial, French Renaissance, Louis XIV and Empire patterns, also a number of miscellaneous patterns which were especially designed by one of the foremost artists. All of our ceilings are made from new dies, hence sharp, clear cut embossings.

If you are interested in ceilings more elaborate and more artistic than those priced and described on this page, then send for our special Steel Ceiling Catalog, which will be sent you free of charge by return mail.

No. 63H2502

SPECIAL BARGAIN

At $3.85 per 100 square feet we will furnish this beautiful Metal Ceiling in French Renaissance design for any size of room. This price includes all nails and brackets.

Beaded Steel Siding and Ceiling.

Made from U. S. standard 28-gauge steel, painted on both sides with the iron oxide paint, ground in linseed oil. Sheets cover 24 inches from center to center of outside beads and can be furnished any length from 4 to 10 feet. The beads are small corrugations, ⅝ inch wide by ⅜ inch deep and 3 inches from center to center. In applying no special tools are required. The sheets should be lapped 1 or 2 inches at ends, and over one crimp at side. They can be applied perpendicularly or horizontally (as desired) to boards, studding or joists if the proper distance apart, or put on over old plaster. Shipped from steel mills in Central Ohio.

When ordering be sure to specify length of sheets desired. Always allow for end lap.

EVERYTHING IN CONCRETE MACHINER

We Guarantee QUALITY. We Save You Money Becaus
Our Prices Are Based on Actual Manufacturing Co

Get This Big FREE Catalog of
CONCRETE MACHINERY
BEFORE YOU BUY ANYTHING IN THIS LIN

Space does not permit the showing of our complete line of concrete machinery in this Big Catal so we have issued a special catalog which illustrates and describes our complete line of concrete b machines, molds, mixers, tile machines, culvert cores, etc. If you are interested, be sure to send this free special catalog. Send us a postal card or letter and ask for our Special Concrete Ma Machinery Catalog and it will go forward to you by return mail. This catalog quotes the lowest pr that have ever been made on high grade machinery, and you really cannot afford to buy a machi or mold anywhere until you get our catalog and see the remarkably low prices we have made on guaranteed machines and molds.

We are the most extensive handlers of concrete machinery in the country, and we offer our ent line of machines and molds at prices which represent but one small profit over the actual manufactur cost. More of our machines are in use than of any other make. Whether you need but one ma or equipment for a complete plant, we can furnish what you need, save you money on your equipm and guarantee to furnish machinery as good or better in quality than you can get at twice our pri Shipment of all our machines or molds is made subject to our usual "Money back if not satisfie privilege which protects you against any possibility of an unsatisfactory deal. **Be sure to get our Concrete Machinery Catalog before you buy anything in this line,** in case you are unable to select yo needs from this and the following page. **No matter what you need for making concrete products do fail to get our free Concrete Machinery Catalog, because it will surely save you money.** We have largest and most complete line of up to date machinery, sold under a binding guarantee as to qua of material and workmanship, and at prices lower than have ever before been asked for practic machines or molds. **Send for our Concrete Machinery Catalog today, NOW, before you forget it.** Our line of designs is complete. Every pattern for face design is made from an impression of actual stone which has been cut by an expert. This insures a perfect and fine appearing product.

INFORMATION FREE. **If you want any special information on the concrete material subje** write us and our expert will gladly give you the desired informati free of charge, and without obligating you in any way. Below we describe briefly some of the lin in our line. However, you should by all means get the special catalog and read our complete descri tions of our entire line of machines and molds. The catalog also contains many photographic re ductions of our machines and molds, and their products, including buildings which have been erec of products made with our machinery.

CONCRETE MACHINERY FOR EVERY PURPOSE

Building Blocks.

Our Triumph Block Machine with complete outfit for 8x8x16-inch blocks at $12.75 is the biggest bargain ever offered in the line. Our Wizard Concrete Block Machine at $42.50 with a complete big outfit is partially described on page 1161 of this catalog. It is the fastest machine ever made, and our price means a saving of about half over what you would have to pay if you bought elsewhere. In connection with our line of block machines, we show a complete line of extra attachments for special shape blocks suitable for special angles and openings, silos and ornamental work. Our line of face plates is most complete and the designs are by far prettier than any that have ever before been offered by anyone. With our machinery you can make any kind or style of block that you may need. Our Special Concrete Machinery Catalog describes and illustrates all this in detail. Be sure to get this free catalog before you buy your equipment. We can save you money and furnish you with better machinery than you can get anywhere else.

Concrete Mixers.

Machine mixed concrete is better than hand mixed, and in addition, you can save time and money by using a mixer and can turn out a better class of work, uniform in color and quality of material and save on the cost of cement because the mixer will do the work quicker and better than by hand. Our Concrete Machinery Catalog tells all about our line of mixers. Be sure to get it and learn how much you can save by buying your machinery from us.

For only $19.75 we can furnish a well made, very efficient hand batch mixer of large capacity. This mixer has a capacity of 3 to 5 cubic feet per batch, or a daily capacity of 20 to 25 cubic yards. It is made of heavy plate steel and best gray iron castings and is securely mounted on a substantial hardwood stand. Our Concrete Machinery Catalog also describes our power batch mixer at $48.25.

Concrete Porches.

A SAMPLE OF OUR PORCH MOLDS PRODUCT

No block yard is complete without a line of molds for making porch columns, piers, rails, balusters, ornamental column caps or ornamental balls. We have an exceptionally fine line of molds for making all kinds of ornamental work for porches and concrete building decoration. This class of work is most interesting, commands a good price and the profits in the sale of concrete porch material are big. You can make concrete porch products in our molds as handsome as cut stone at a small fraction of the cost. These molds are furnished at prices ranging upwards from $3.79 for a 10x12-inch column mold. Our complete outfits of porch and baluster molds at $17.85 and $43.65 cannot be purchased anywhere else for less than $35.00 and $75.00, respectively. All molds fully guaranteed. For $10.95 we furnish an adjustable cap, sill and step mold suitable for making window caps, sills, steps, etc. We can furnish extra ornamental plates for this mold for making ornamental caps, coping, water tables, etc. Be sure to get our Special Concrete Machinery Catalog before you buy any concrete machinery of anyone.

Concrete Brick.

Concrete brick are rapidly displacing clay brick, and in most localities, where there is a supply of sand or gravel, concrete brick, much more handsome in appearance and more durable than clay brick, can be made and sold at a profit at a lower price than clay brick. We can furnish a durable and simple brick machine at $18.65. The machine has a capacity of 1,200 to 1,500 brick a day. Our Two-Way Brick Machine makes brick either face up or face down, has a capacity of 3,000 brick a day and is sold at about half what is asked by others for an inferior machine. Both our brick machines and a full line of extra ornamental face plates are described in our Special Concrete Machinery Catalog.

Concrete Fence Posts.

Wood fence posts are becoming scarcer and higher in price each year. A first class wood post cannot be had at any price, due to scarcity of good timber. Concrete forms a perfect substitute for wood posts and makes a post that is everlasting, proof against rot, prairie and forest fires and repair expense. The concrete post in the first place need not cost more than a wood post and when the elimination of replacement and repair expense is considered no one can afford to use anything but concrete fence posts. Our Special Concrete Machinery Catalog describes in full how concrete fence posts are made, tells what they cost, and illustrates two types of molds for making concrete fence posts. The molds can be had at prices ranging from $2.25 up. You can save money by using our concrete fence post molds.

Concrete Tile.

There is probably no branch in the manufacture of clay product which has been displaced so rapidly by concrete as the manufacture of tile or pipe for drainage and sewerage purposes. Concrete tile are cheaper and have been proven beyond all doubt to be better than clay tile from every standpoint. Our Concrete Machinery Catalog describes and quotes prices on machines and molds for making both drain and sewer tile and tells all about the advantages of this new everlasting material over the old costly and short lived clay tile. If you are considering the manufacture of tile or want tile for drainage or sewerage purposes, be sure to get our Special Concrete Machinery Catalog and learn all about how easily and cheaply you can make everlasting tile.

Concrete Culverts.

County and road commissioners take notice! We are now in a position to furnish a collapsible steel core for use in concrete culvert and sewer construction at a price for outright sale that is less than what you ordinarily would have to pay for the rental of molds for this kind of work. Former steel molds or centers for culvert and sewer construction were leased or rented, but by special arrangement we can sell the molds outright and save you some money besides. Don't fail to send for our Special Concrete Machinery Catalog if you are interested.

WIZARD AUTOMATIC FACE DOWN CONCRETE BLOCK MACHINE

42.50

With Big
mplete Outfit

The World's Best
Simple, Quick Acting
Easily Operated

he Wizard is the only automatic ptical core concrete block ma-ne manufactured, and actual tests our customers have demonstrated ond all question of doubt that it the quickest and most easily rated machine on the market. bor is one of the biggest items expense in the manufacture of ent blocks, and the machine ich will turn out the largest num-of perfect blocks in a given th of time is the machine that ll be the biggest profit maker for owner. The great saving in time d labor enables you to undersell r competitors and get more busi-ss.

VE MAN CAN MAKE 125 LOCKS A DAY on the Wizard Machine, while best that one man can do on the rage machine of other makes is enty-five blocks a day. As the terials in each block cost the me (about 5 cents a block) and labor is the only other item, u can readily see that when the Wizard turns out 125 in place seventy-five blocks in the same time, it becomes a money ers to its owner. Comparing the total output of the Wizard th that of the slower machines, and comparing the cost of block in each case, you can double your profits by using e Wizard.

UR CHALLENGE TEN-DAY TRIAL OFFER AND GUARANTEE. nd us your order for the Wizard Machine and we will ship you the chine with complete outfit, including twenty-five pallets, direct m our factory. You can compare it with other machines, and test for ten days, and if it does not make better blocks and make them ter and easier than any other machine on the market, even though er machines cost twice the price you paid for the Wizard, you can urn it to our factory at our expense and we will immediately return you the total cost price and any freight charges you paid.

ALLETS. The Wizard Block Machine uses iron pallets which are provided with a handle for convenience in handling, and s away with the use of a special carrier, which is so inconvenient use, but is required on most other machines. The block is removed m the machine as soon as it is made, but must remain on the llet for twelve to twenty-four hours, until it becomes sufficiently to handle. We furnish twenty-five pallets with each machine and it is necessary to have a pallet for each block you want to make a day, we would advise you to order extra pallets as per list below. ood pallets, while a little lower in first cost, prove to be the most pensive in the long run. The alternate wet and dry conditions to ich they are subjected cause them to warp and crack very quickly d if this is not discovered promptly you are liable to make a great ny imperfectly shaped blocks which will have to be discarded, using a loss in time, labor and material. These pallets also require placing. Iron pallets, barring accidents, are everlasting; will never rp or crack and never require replacing.

PRICE LIST OF PALLETS.

Catalog No.	Size, Inches	Weight, Pounds	Price, Each
11H5537	8x 8x16	7	24c
11H5547	8x 9x16	9	27c
11H5557	8x10x16	10	32c
11H5567	8x12x16	11	38c

THE CONSTRUCTION of the Wizard Block Machine is perfect in every detail, all parts being made of the best grade iron, and all parts are accurately fitted, so that the machine as a whole, works smoothly and accurately, insuring a perfect product.

OPERATION. Blocks are made face down, which is conceded by all block authorities to be the proper way to make a block. This method permits the use of a fine waterproof material for facing and a coarser material for the backing of the block. In addition, when tamping face down, the material is forced into the face plate depressions, which brings out all the beauty of the design.

CORES are elliptical in shape, which makes a stronger block than any other type. Core space is one-third the total volume of the block, leaving two-thirds bearing surface, which is the standard adopted by concrete block authorities. To release the block the handles are drawn forward and, as the flask turns over, the cores drop out gradually and smoothly and are entirely out of the block when flask is completely turned over. The handles are next spread out, releasing the end doors from the block, and the flask is then thrown back, leaving block on pallet to carry away. The release of the block and locking of the flask for the next block can be accomplished in half the time it takes to tell it. Iron pallets are used which are provided with handles, doing away with the necessity of a separate carrier so inconvenient to use, and takes time to handle.

THE OUTFIT FURNISHED WITH EACH MACHINE consists of two sets of face plates, end doors and attachments for making whole, half, quarter, corner, gable, joist and pier blocks in standard rock and plain face designs; a set of plugs for making solid blocks; tamper; strike off tool for finishing back of block; hopper and twenty-five cast iron pallets. This equipment is all that is necessary for making blocks for the average building.

A COMPLETE LINE OF EXTRAS. Lack of space prevents our showing our extra face designs and special bay window, 4-inch course and circle block attachments for the Wizard Machine, but we show illustrations of our complete line of face plates, attachments, etc., in our Special Concrete Machinery Catalog, which we send free on request.

If you want a special attachment and do not care to wait for our special catalog, order whatever attachment you wish and allow the price usually asked for this attachment by others. We will fill your order at the correct price and return the difference between our price and the amount you send.

All our face patterns are made from master patterns that were first made in cut stone. Experts have pronounced them to be the most handsome plates offered by any concern. We can furnish the following designs: Shallow Rock, Medium Rock, Heavy Rock, Plain, Panel, Tooled Edge Rock, Tooled Edge Bushhammer, Tooled, two styles of broken Ashler, Water Table, Cobblestone, Ornamental Wreath, Rope and Scroll. You can have your choice of any two of these designs with our Wizard Machine, if you prefer any of them to the Medium Rock and plain design furnished regular. Our Wizard Block Machines are shipped direct from factory in Central Ohio.

WE MANUFACTURE PLUMBING GOOD

YOU CAN NOW AFFORD THE LUXURIES OF MODERN PLUMBING no matter where your home is located. By manufacturing plumbing goods in our own factory we are able to sell you the best grade of modern plumbing at a great saving as compared with what you will pay elsewhere, because the plumbing business has been monopolized by a combine which maintains prices by agreement and reaps large profits. Our one profit principle effects an exceptional saving for you when applied to the plumbing goods business.

WE HANDLE STRICTLY "A" GRADE No. 1 PLUMBING GOODS, tested and inspected before shipping. Every article is sold under our binding guarantee as to quality. On receiving any plumbing goods from us that fail to please you, you may return them at our expense and we will return to you the price and any freight charges you paid. We could not afford to make this guarantee unless we were absolutely sure our goods would please you.

WE HAVE MADE IT VERY SIMPLE to install plumbing in any building, old or new, and have solved the water supply problem for you, giving any resident of the most remote country district the same benefits and as great conveniences in the matter of water supply as the residents of cities. We have entirely eliminated the necessity of using lead pipe and have practically made plumbing an iron pipe proposition throughout. About all you need to do when you order our plumbing with iron pipe connections is to locate the place for the goods in your building and then screw the parts together. Any ordinary workman or householder can do it with perfect success, and if you desire we will gladly send you a complete working drawing when you place your order with us, if you will send us a rough sketch of your house. This plan will show you where to place your fixtures, where to run your stack, how to vent each fixture; in fact, this drawing will show you where to place every fitting we send you and make the installation of your plumbing so simple that practically no one will experience any trouble in installing these goods. If you want to get our prices and advice on putting in a water supply outfit that will give you even a higher water pressure than most cities have, and at a very small expense, see page 1178 of this catalog.

SPECIAL PLUMBING GOODS CATALOG, FREE ON REQUEST, contains a larger assortment and a more complete line of plumbing goods than space will permit us to show in this catalog. We will be glad to have you make your choice from this catalog, but if you want some article not found here, be sure to write for our Special Plumbing Goods Catalog before buying elsewhere. We will supply all your needs at prices which will effect a big saving on everything you buy.

WE HAVE SHIPPED THOUSANDS OF THESE OUTFITS AND HAVE YET TO HEAR FROM ANY DISAPPOINTED CUSTOMER. OUR PLUMBING GOODS ARE MADE UNDER OUR OWN SUPERVISION. WE KNOW THEIR MATERIAL AND CONSTRUCTION FROM START TO FINISH AND ARE THEREFORE IN A POSITION TO GUARANTEE THEM THROUGHOUT.

THE CLOSET furnished with this outfit is a low down pattern, is thoroughly sanitary, and one that will pass the most rigid inspection. The tank is made of golden oak, thoroughly seasoned and highly polished. It has a capacity of 6½ gallons, which is sufficient to cause a positive and powerful flush. It is lined with copper, all fittings and trimmings are made of heavy brass, and it is furnished with a rubber ball valve, which is one of the best valves on the market on account of its simplicity. The water is shut off by a rubber ball setting into the seat of the flush valve, and should it become necessary at any time to repair this valve, all that is required is to unscrew this rubber ball from the rod and screw in a new ball, so simple a child can do it easily. It is furnished with pearl top push button, a slight touch of which releases the valve and causes a positive flush. The seat furnished with this outfit is golden oak. Closet seat, which is highly polished, is furnished with cover. It is also furnished with offset nickel plated heavy brass hinges. The bowl furnished with this closet is a siphonic action bowl made of the highest grade English vitreous earthenware, and is the equal of any pottery on the market, regardless of price. We furnish this closet complete with tank, seat, bowl, supply pipes and nickel plated closet screws to fasten bowl to floor.

WRITE FOR OUR SPECIAL PLUMBING GOODS CATALOG

THE LAVATORY furnished with this outfit is a cast iron porcelain enameled lavatory 18x21 inches in size, 8-inch back and a 4-inch roll rim. We consider this lavatory one of the neatest and most efficient ever placed on the market. It is finished complete with sanitary soap tray, 1½ inch heavy nickel plated anti-siphon trap with wall, two nickel plated low down compression basin cocks with china tops marked "Hot" and "Cold," two nickel plated supply pipes from basin to wall.

THE BATH TUB furnished with this outfit is a 5-foot tub made of cast iron with roll rim and is white porcelain enameled. It is manufactured from the highest grade gray iron, is graceful in appearance and is equal to any bath tub on the market. We furnish this bath tub complete with No. 4½ Fuller bath cock made of brass, nickel plated and connected with brass nickel plated waste and overflow pipes, and two heavy brass nickel plated supply pipes.

ABOUT SHIPPING. The closet in this outfit is shipped from Chicago. Shipping weight, 100 pounds. The bath tub and lavatory are shipped from our factory in Southeastern Wisconsin. Shipping weight, 380 pounds.

OUR GEM BATHROOM OUTFIT, $45.35

WITH SIPHON JET CLOSET.

OUR GEM BATHROOM OUTFIT is a strictly high grade bathroom outfit, and one that is in keeping with the furnishings of the finest homes. We have prepared this outfit in order that our customers may have an opportunity to equip their homes with an outfit equal to the best on the market, regardless of price.

THE TUB furnished with this outfit is a 5-foot heavy roll rim, cast iron, porcelain white enameled bath tub with claw pattern feet, and is furnished complete with our No. 4½ brass nickel plated bath cock, nickel plated heavy brass supply pipes, and nickel plated brass connected waste and overflow.

THE LAVATORY furnished is 18 x 24 inches with a 10-inch back, made of high grade cast iron, heavy enameled by a special process which we guarantee will not flake, craze or peel off. It has a large apron, as shown in illustration, and is furnished complete with our anti-siphon trap, nickel plated air chamber supply pipes and nickel plated brass faucets.

THE CLOSET furnished with this outfit is a siphon jet bowl with a low down tank and seat. The tank is highly polished, fitted with heavy brass trimmings, and is furnished with a pearl top push button, a slight touch of which releases the valve and causes a positive flush. It is furnished with a heavy brass nickel plated supply pipe from tank to floor. The seat is made of highly polished oak and has heavy brass nickel plated offset hinges. The bowl furnished with this closet is made of the very highest grade of English vitreous earthenware.

WE FEEL POSITIVE that any person purchasing this outfit from us will be more than satisfied with its quality and appearance, as it is impossible for us to do justice to it by mere description and illustration. The closet in this outfit is shipped from Chicago. Shipping weight, about 100 pounds. The bath tub and lavatory are shipped from our factory in Southeastern Wisconsin. Shipping weight, about 450 pounds.

JEWEL BATHROOM OUTFIT - - - - $68.2

THIS OUTFIT is the height of perfection, and equipped with all latest modern appliances. The bath tub is a 5-foot grade bath tub, with nickel plated combination hot and cold water bath cock, nickel plated supply pipes, and is fitted with our improved standing waste which is a decided improvement over the old style plug.

THE LAVATORY is our pedestal style, 20x24 inches, and is furnished with our model waste, nickel plated air chamber supply pipes, and nickel plated cross handle indexed basin cocks.

THE CLOSET is one of the most improved types of up to date siphon jet on the market. The tank is genuine mahogany with piano polish, lined with a heavy grade of copper lining, high pressure six pound ball cock, and is equipped with a china handle lever to flush the bowl. The seat is genuine mahogany, semi-saddle pattern. The closet is equipped with a rubber ball valve, the best and simplest valve on the market. The bowl is siphon jet style, made of the highest grade vitreous earthenware.

THIS OUTFIT is an unapproachable value and the equal of any outfit you could purchase, regardless of price. The lavatory and bath tub are shipped from our factory in Southeastern Wisconsin, the closet from our Chicago store. Shipping weight, complete, about 500 pounds.

Price 12c

The Acme Water Still.

No. 42H1479 This illustrates one of the most improved water stills on the market and one which we know will give our customers satisfaction. This still when placed on your cook stove will supply 10 quarts of distilled water a day enough water for drinking and toilet use for the ordinary family. This still is made of polished copper tinned on the inside; is 17½ inches high and 10 inches in diameter. Weight, about 25 pounds. Price $5.00

Galvanized Range Boilers.

Tested to 200 Pounds Pressure and Guaranteed to Stand an 85-Pound Working Pressure. Guaranteed One Year.

Range boilers can only be used in homes where there is a constant water pressure, which can only be obtained in cities having water works or in homes equipped with our water supply outfits. Where you have such pressure, these tanks can be connected with lead or iron pipes to your cook stove or hot air furnace and hot water can be drawn from the faucets without any extra expense. Our boilers are made of heavy gauge galvanized iron fully riveted with galvanized rivets. But when ordinary or fire pressure is over 75 pounds we recommend our extra heavy boiler listed below. Furnished complete with stand, galvanized inside tubes and extra heavy brass couplings.

No.	Gal.	In.	Height, Wt., Lbs.	Price
42H1081¼	30	60	72	$ 5.75
42H1083¼	40	60	85	6.95
42H1084¼	52	60	120	11.75

The above prices are for boilers fitted with brass couplings for lead pipe connections. If wanted for iron pipe connections add 20 cents to above prices.

Extra Heavy Range Boilers.

Tested to 250 Pounds and Guaranteed to Stand 150 Pounds Working Pressure. Guaranteed Three Years.

These boilers are much heavier and better boilers than the ones listed above, and should be used in cities having a pressure of over 75 pounds; they will outwear the Standard Boiler, and we recommend their use. Furnished complete with brass couplings at prices given below.

	Gallons	Weight, Lbs.	Price
No. 42H1087¼	30	105	$ 8.10
No. 42H1088¼	40	124	10.25
No. 42H1089¼	52	170	13.00

The above prices are for boilers fitted for lead pipe connection; if wanted for iron pipe connection add 20 cents to above prices.
Prices on Copper Range Boilers quoted on application.

Peerless Combination Range Boiler and Gas Water Heater.

No. 42H1090½ The Peerless Combination is without question the most efficient and economical method ever devised for the purpose of heating water. It is made of extra heavy materials and is guaranteed by us for the period of three years. It is so constructed that it eliminates coils or dead arms, has a perfect and direct circulating system within itself and it is an impossibility for it to clog or choke up. It is made with a two-burner system and with the small burner alone, which consumes five feet of gas an hour, will retain water in the boiler at 140 degrees. We can cheerfully recommend these boilers to our customers and should always be purchased when gas is to be used for heating water. This boiler can also be connected with a furnace or cook stove the same as the ordinary range boiler.
30-gallon, complete, as shown. Price $24.00
40-gallon, complete, as shown. Price 25.75
We can furnish the above fitted with gasoline burners. Write for prices if interested.

New Style Philadelphia Hopper Closet.

No. 42H924¼ This is a Cast Iron Closet Bowl, heavily enameled on the inside and painted on the outside. To be connected with lead pipe direct to water pressure. This makes a neat and cheap outfit for use in basement and outside places. Weight, 15 pounds. Price, for closet bowl only....$1.30
For seat for above bowl see No. 42H928¼.
We can furnish the above threaded for iron pipe at 50 cents above price quoted.

The Child's Comfort Seat - - - - - 80c

No. 42H117 A detachable Toilet Seat for children. Convenient, sanitary article used in connection with the regular seat of water closet. Takes place of chamber, vessel and nursery commode. Can be carried in a traveling bag for use on trains and boats and in railroad stations and hotels. Price.....80c

Hercules Gas Water Heater.

$4.20

No. 42H1080¼ A moderate priced copper coil heater and one which we are sure will give good results. It has a coil of best seamless drawn copper tubing, which provides ample heating surface and possesses many advantages over cast iron devices, iron pipes, etc., being not only a better heat conductor, but reducing the number of joints to a minimum. It can be connected readily to any range boiler with iron pipe, as the unions furnished with it are threaded for iron pipe connections. Each heater is fitted with ground joint brass unions. The conical deflector forces the flame and heated air to circulate close to the coil, and prevents down draft. The jacket is lined with asbestos, which prevents the escape of heat into the surrounding air. It is 8 inches in diameter, 15 inches high. ¾-inch tube. Usually connected with 30 or 40-gallon boiler to supply hot water to sink, bathroom and lavatory. Will heat enough water for a bath in ten minutes. Weight, 25 pounds.
Price, with Russia Iron Jacket.....$4.20

Our New Model Nickel Plated Gasoline Heater $7.85

No. 42H217¼ Is made of 24-gauge galvanized iron incased in nickel plated white metal and is an ornament to any bathroom. It is 28 inches high and 12 inches in diameter and will hold 13¾ gallons of water. The copper coil and heat flues are placed at the bottom of the heater. The circulation is created by a ⅝-inch copper coil 6 inches in length, extending from receptacle up into the heater, which insures circulation and rapid heating qualities. The fire coming in contact with the bottom and the faucet so arranged that all the water drawn from the tank passes through the receptacle, enables one to get hot water almost instantly. Small quantities of water heated in two minutes, and will also heat the water ready for bathing in twenty minutes. Shipped from factory in Detroit, Mich. Shipping weight, 40 pounds.
Price $7.85

Enameled Iron Kitchen Grease Trap - - - - $6.10

No. 42H700¼ This trap is mostly used in hotels, restaurants or anywhere where a large quantity of grease is thrown into sinks, as it catches all the grease and prevents it from running into the sewer and clogging sewer pipes. Size, 9x10x10 inches. Weight, 70 pounds.
With polished brass trimmings. Price.$6.10
With nickel plated trimmings. Price.. 6.29
We can furnish the above with all connections threaded for iron pipe at 75 cents above prices quoted.

Mahogany Finish, Low Outfit - - - - $12.95

No. 42H118¼ This outfit made of Birch with mahogany finish, makes a very desirable finish instead of oak, and one we guarantee to give our customers satisfaction. The tank and seat are made of birch wood with mahogany finish. The tank is lined with 10-ounce copper and capped with a heavy galvanized strip; is equipped with a high pressure ball cock, rubber ball valve and is fitted with a pearl top push button. The seat is fitted with heavy brass offset hinges which are made to stand wear as well as being highly nickel plated. The bowl is a wash down siphonic action bowl, made of the highest grade vitreous earthen-

s is an outfit that is ordinarily sold for double the ask for it, and know that it will meet the approval tomers desiring a mahogany finish outfit. Weight, . Price.....$12.95

H119¼ Same as above, fitted with siphon Price.....16.50

Low Tank Combination Closet With Siphon Jet Bowl - - $15.25

No. 42H120¼ The low tank closet is by far the most popular closet now on the market. It does away with the long supply pipes and high tank. Has a 2-inch opening in bowl which insures a positive flush every time; is noiseless and neat in appearance. Can be placed in an out of the way place or under stairs where high tank will not go. The tank is made of solid oak, golden oak finish, is lined with heavy sheet copper, has copper float, brass valve, etc. The valve is our improved positive flush valve, and cannot get out of order. A slight pressure of the valve lever or button empties the tank completely. The seat and cover are made of oak, with heavy brass offset hinges, heavily nickel plated; supply pipe is ¾ inch in diameter, nickel plated; furnished complete ready to set up with a heavy brass nickel plated connection from tank to bowl. The bowl is high grade vitreous English earthenware, siphon jet style. Supply pipe is threaded for iron pipe connection. Shipping weight, about 115 pounds.

Price, complete, with plain earthenware bowl.....$15.25

If wanted with local vent, add 25 cents to above price. We can furnish this style bowl only, without tank or seat, for $7.65.

No. 42H125¼ Quarter Sawed Oak Outfit, same as above, except the tank and seat are made of quarter sawed oak with piano polish. Price.....$16.75

Genuine Mahogany Low Down Closet Combination - - $22.50

No. 42H126¼ This outfit is composed of a genuine mahogany tank and seat with a siphon jet closet bowl. The tank is made of genuine mahogany with round corner box top and is equipped with a china handle and a nickel plated lever at the bottom of the tank, as shown in illustration. This without question is one of the highest grade outfits on the market today and has been gotten up by us in response to requests from our many customers who desire to purchase an especially high grade closet outfit at a price quoted by others on competition closets. It is furnished with a rubber ball valve, which is the most simple contrivance on the market today. The tank is lined with heavy copper and is high grade in every respect. The seat is a genuine mahogany semi-saddle seat with heavy nickel plated offset hangers. The bowl is a siphon jet bowl made of the highest grade English vitreous earthenware. Shipping weight, 120 pounds.

Price, complete, as shown in illustration $22.50

Washout Water Closet Loose Board - - - - $11.30

The equal of closets that plumbers sell at $16.00 to $20.00.

No. 42H130¼ By far the best finished and most up to date closet on the market. It has a round cornered oak 5½-gallon siphon tank, Golden oak finish, with double oak attached seat, 1¼-inch nickel plated flush pipe and ½-inch nickel plated supply pipe, with No. 3 front washout, plain earthenware bowl and all fixtures are nickel plated. Tank is copper lined, has patent float cutoff, with chain and pull to flush closet, and with loose board back, which does away with iron brackets and

much neater job. It is made of the materials throughout and the workand finish are perfect. Furnished ready for use, no fitting or extras Shipping weight, about 90 pounds.

ith plain bowl.....$11.30

ed with trap vent, add 25 cents to e.

furnish this style bowl only, with- r seat, for $4.35.

Our Special Low Down Closet Outfit, With Brass Supply Pipe - - - $11.95

No. 42H111¼ One of the best bargains ever offered by anyone, due to the quantities in which we purchase them and the one small profit we add. The tank furnished with this outfit is a 6½-gallon tank and is lined with heavy copper from the bottom of the tank to the height in which the water stands. From this part to the top of the tank is placed a heavy galvanized iron strip which prevents the moisture from eating through the wood, as is often the case with the majority of the low price closets on the market today. This tank is fitted with a rubber ball valve, one of the simplest and best valves on the market. The tank is made of golden oak, well seasoned and highly polished, and is furnished with a pearl top push button, a slight touch of which raises the rubber ball, releases the water and causes a positive flush of the closet bowl. The seat is also made of well seasoned golden oak, highly polished. It is furnished with nickel plated offset hinges, made of heavy brass, and will practically wear for a lifetime. The seat is furnished with rubber bumpers where they are necessary. The bowl is a siphonic action closet bowl. It is made of the highest grade of English vitreous earthenware, is nicely glazed and polished, and the equal of pottery sold by anyone, regardless of price. We furnish nickel plated closet screws to fasten bowl to floor. We also furnish a heavy brass nickel plated supply pipe reaching from tank to the floor. The connection to attach bowl to the tank is a heavy brass nickel plated elbow. Shipping weight, 100 pounds.

Price, complete as described, with plain bowl, with supply pipe threaded for iron pipe connection $11.95

No. 42H116¼ Quarter Sawed Oak Closet Outfit, same as above, except the tank and seat are made of quarter sawed oak and finished with a piano polish. Price....$13.50

If bowl is wanted with local vent, add 25 cents to above price. We can furnish this style of bowl only, without tank or seat, for $4.30.

Peerless Combination Hopper and Trap Closet, With Loose Board Tank - - - - $11.95

No. 42H136¼ This makes one of the best low priced outfits we carry. The tank is a 5½-gallon tank, made of oak, golden oak finish. The pipe and fittings are the same as described in our No. 42H130¼ Closet. Everything is first class. Could not work better nor last longer at any price. A great many prefer this combination hopper to the regular No. 3 front washout, as shown in No. 42H130¼, as it gives a more positive flush, has greater force, etc. The tank is fitted with a loose board back, which makes a much neater and better job than tanks furnished with brackets. Shipping weight, 95 pounds.

Price, complete, ready to set up...$11.95

If wanted with local vent, add 25 cents to above price.

We can furnish this style bowl only, without tank, seat or supply pipes, for $4.30.

LESS SIPHON JET T - - - - - - - $16.73

No. 42H141¼ Furnished complete with 8-gallon high tank with loose board back which does away with unsightly brackets and makes a very neat job. It is lined with copper, and all fittings and valves are made of brass. The seat is made of oak, highly polished, and the tank and seat are golden oak finish and seat is fitted with nickel plated brass post hinges. The bowl is a siphon jet bowl. The flush and supply pipe are made of brass heavily nickel plated. This is one of the best outfits that money can buy. Furnished complete as shown in illustration. Shipping weight, 100 pounds.

Price, with plain bowl $16.73

If wanted with local vent, add 25 cents to above price.

We can furnish this style bowl only, without tank, seat or supply pipes, for $8.25.

furnish Nos. 42H136¼, 42H130¼ and 42H141¼ th all connections threaded for iron pipe at 25 e prices quoted.

VITREOUS TANK LOW DOWN CLOSET - - - - - - - $15.10

No. 42H112¼ We are able to offer our customers this season an outfit with a vitreous tank, the equal of outfits for which others ask $30.00 to $35.00, and one which we know will give universal satisfaction. The tank is a recess pattern tank, much larger than the ordinary tank sold by the regular plumber, with a china handle with double action lever, double guide, flush valve and nagrom float, elevated ball cock and seamless copper float, large flush elbow made of brass, heavily nickel plated, and furnished with heavy brass supply pipe, nickel plated. The bowl furnished with this closet is a siphon action wash down bowl made of the highest grade English vitreous ware. The seat is birch, mahogany finish with nickel plated offset, post hinges; in fact, it is one of the highest grade outfits of this kind on the market today. Shipping weight, about 125 pounds.

Price $15.10

No. 42H114¼ Same as above, except furnished with siphon jet bowl. Shipping weight, about 150 pounds.

Price $19.10

WHITE ENAMEL FROST-PROOF CLOSET, Complete, $10.40

No. 42H105¼ In our Frostproof Closet we believe we have one of the best on the market. The heavy brass valve which we furnish is placed below the frost line and is connected to hopper with a heavy coppered chain, fastened to seat. When seat is lowered the valve opens automatically and flushes the hopper. When seat is raised it closes the valve and opens the drain pipe, which allows all water left in pipes to drain into trap, which leaves pipes at all times free from water. The price we ask is for this outfit complete with cast iron hopper, enameled inside, round wood seat, brass frostproof valve, 5 feet cast iron soil pipe, cast iron P trap, wrought iron supply pipe, chain and lever combination lead and iron ferrule. This is the best outfit to use in cold or exposed places, because water is always below frost line. No closet tank is furnished or needed with this outfit. Shipping weight, 110 pounds. Price, complete.....$10.40

Brass Gate Valves.

No. 42H5788 These standard valves have brass seats and rising stem, tested to 100 pounds steam pressure. In the construction of these valves the bearing of the wedge being central it acts uniformly on all parts of the disc, consequently it will force the disc to the seats and have an equal bearing on all parts. These valves are used either for steam or water where a full opening (same size of pipe) is required and will allow the water to be drained from pipe in cold weather.

Hercules Stop Waste Cock.

No. 42H5873 The Hercules is so constructed that it can be instantly changed from right to left, and vice versa, by simply reversing position of handle when cock is open. The combination T and lever handle is cast in one piece. When T handle is desired the lever can be easily broken off by a slight blow from a hammer. This stop is made of a very high grade of metal and will give much better results than our standard grade goods.

Engineers' Favorite Flue Scrapers.

No. 42H6192 One of the most popular tools on the market; has adjustable screw which fits pipe snugly. Sizes are for outside diameter of pipe or flue.

Size	1¾	2	2¼	2½	3	3½	4
Weight, lbs.	1½	1½	1¾	2	3	3½	4
Price	44c	45c	50c	56c	67c	78c	90c

Expansion Flue Brushes.

No. 42H6198 The illustration shows our improved Expansion Tube Brush. The improvement consists in so arranging the sections that the open space between the sections does not extend the entire length of the brush and thus cleans the whole of the flue each time it is pushed through. This brush is made entirely of steel and malleable iron, and is the most substantial and effective flue cleaner made. In ordering tube brushes be particular to give the outside measurement of tube.

Open.

The New Judson Governors.

No. 42H6398¼ This governor is especially designed for traction engine use where it is necessary to change the speed of engine while it is running. By this speed can be increased or diminished from 25 to 30 per cent without changing the spring. Also with this improvement the engineer can give the engine sufficient speed kind of road service, and immediately change it to the proper speed for threshing purposes without stopping. This governor is otherwise constructed so the jolting of over rough and uneven ground or roads has but slight effect on the regulation.

Size, In.	Height, In.	Pulley Face	Weight, Lbs.	Diam. Speed	Engine Cylinder Diam.
⅝	10	1½x1¼	6	700	1½ to 2½
½	13	2¼x1½	16	600	3 to 3

Cast Iron Closet Bend.

No. 42H1902¼ Size, 4x18 inches, with adjustable floor flange, tapped on both sides for 1½-inch iron pipe.
Price $1.90

Iron Body, Brass Screw, Trap Screw Ferrules.

No. 42H1450 The body is cast iron in regular pipe sizes, fitting the hub neatly and making a good wall to calk against. The projections on side prevent ferrule turning after being calked. The cover being of brass cannot unite with the iron, and the threads are thereby made proof against rust. It is the best ferrule made and moderate in cost.

Armstrong Pattern No. 2 Adjustable Stock and Dies for Threading Pipe.

The best known pipe cutting tool on the market. They are made of highest grade material throughout, have tool steel cutters, are easily adjusted and are the most satisfactory pipe stock and dies ever constructed. More of them have been sold in the past fifteen years than any other make. The dies can be adjusted to the variations in the size of fittings, and by reason of their peculiar cutting edge can be worked with much less labor and accomplish the desired results in less time than with other dies. The dies have a double taper; that is, the taper at the entrance for the first few threads is greater in degree than the standard taper which forms a lead to the dies, causing them to start on the pipe without filing, even when there is a swell or burr, and requiring no pressure to start dies on the pipe. Cut five sizes, ¼ inch to 1 inch, right hand. Complete in hardwood box. Weight, 17 pounds.

No. 42H6014 Size No. 2. Price, per set.....**$3.15**
Extra Pipe Dies, each size, 2 pieces.....**.50**

EVERY FARMER HIS OWN PUMP MA

We carry one of the most complete lines of pumps of all styles and sizes at prices (quality considered) lower than ever shown by any manufacturer or dealer. This line has been selected after very careful investigation and study, and our claims are not merely talk or empty boasts, but the facts as shown by actual tests. Our pump business has grown steadily, the result of our shipping only such pumps as we know will give the best of satisfaction. We show for your convenience, complete pump outfits for different depth wells. The prices quoted include pump, piping, cylinder, cylinder rods, everything cut and threaded complete, so that all you have to do when you receive the pump is to screw the pipes together, lay a few boards over your well for a platform, nail or bolt your pump to this platform, and the equipment is complete, ready to pump water.

THESE OUTFITS ARE VERY SIMPLE TO INSTALL. You will have no difficulty whatever in putting in any of these outfits. We are so confident of this that we guarantee to accept back any of these outfits and return the price and any freight charges you paid if find that you cannot put it in so it will work perfectly.

We list two styles of pumps: Lift Pumps and Force Pumps. Lift Pumps lift w to the spout from which the water flows. Force Pumps lift and force the water at time. If you want to force water to different places about your premises, order Pump. Wherever water is to be lifted more than 30 feet it is necessary to h cylinder extended, as water cannot be lifted more than 30 feet to the cylinder. work we make a charge of 5 cents a foot for cutting and threading the rod. charge does not include piping. You must order enough piping to reach from t into the water in your well.

We are always pleased to furnish estimates on complete Pump Outfits. Se diagram of your well, where you want to use the water, depth of well and whether sire to lift or force water, and we will quote a price for the complete outfit. We f this information free and it places you under no obligation to buy anything from us.

EUREKA ANTI-FREEZING LIFT PUMP

COMPLETE WITH GALVANIZED PIPE FOR DUG OR OPEN WELLS

$4.75

IN OUR EUREKA WINDMILL LIFT PUMP we offer you an outfit suitable for dug or open wells. The prices quoted below are for pumps fitted with iron cylinder, but where well is over 30 feet deep we recommend the use of our brass body cylinder. This is a heavy, substantial pump, and we guarantee it to give good satisfaction in wells up to 80 feet deep when the cylinder is lowered for deep wells as shown in illustration. This pump is designed for use in dug or open wells and is intended to lift and not to force water. For such a well we can guarantee this pump to be equal to any pump on the market, and we know that any one of our customers purchasing one of these outfits will be highly pleased with it. Do not hesitate to order this pump through fear you cannot set it in the well. We cut and thread the pipes and rods, and all you have to do is to screw the pipes and rods together, set it on your platform, and you are ready to pump water. We furnish this pump with a combination head and it can be used either to attach to a windmill or for pumping by hand. If, however, you desire to purchase this pump for hand use only, with a top such as shown in the small illustration, we can furnish it in this way, and if you desire your pump fitted in this manner, you can deduct 25 cents from the prices quoted below.

THE PRICES quoted below are for complete outfits, pumps, galvanized pipe, cylinder and rod all cut and threaded to the proper lengths, complete with a 3x10-inch iron cylinder, which is most commonly used. If, however, you desire a large quantity of water, we can furnish a 3½-inch cylinder at 50 cents over prices quoted below.

No. 42H5100¼ Pump and outfit complete with 1¼-inch pipe for 10-foot well. Weight, 90 pounds..... **$4.75**

No. 42H5101¼ Pump and outfit complete with 1¼-inch pipe for 15-foot well. Weight, 102 pounds..... **$5.25**

No. 42H5102¼ Pump and outfit complete with 1¼-inch pipe for 20-foot well. Weight, 114 pounds..... **$5.75**

No. 42H5103¼ Pump and outfit complete with 1¼-inch pipe for 25-foot well. Weight, 126 pounds..... **$6.25**

No. 42H5104¼ Pump and outfit complete with 1¼-inch pipe for 30-foot well. Weight, 138 pounds..... **$7.50**

No. 42H5105¼ Pump and outfit complete with 1¼-inch pipe for 40-foot well. Weight, 174 pounds..... **$9.00**

No. 42H5106¼ Pump and outfit complete with 1¼-inch pipe for 50-foot well. Weight, 200 pounds..... **$10.50**

If a pump is wanted for wells over 50 feet deep, just state how deep the well is in which you desire to use this pump and allow 15 cents for each foot orer the price quoted for the 50-foot well. For example: If your well is 75 feet deep the price of the outfit would be as follows: Cost of 50-foot well, $10.50; 25 feet extra at 15 cents a foot, $3.75; or a total of $14.25. The above prices are for pumps fitted with iron cylinders. We recommend the use of brass body cylinder. If wanted with 3x10-inch brass body cylinder instead of the iron add $1.50 to above prices.

EUREKA ANTI-FREEZING DRIVE WELL OUTFIT

COMPLETE WITH GALVANIZED PIPES

$5.70

IN OUR EUREKA DRIVE WELL OUTFIT we offer our customers an outfit to be used in places where water is reached within 25 feet from the surface of the earth and in ground in which there is no rock. WE FURNISH THIS OUTFIT in such a way that any person, whether or not he has ever installed a pump, can easily put it in with absolutely no chance for failure. In order to install a drive well, all that is necessary to do is to dig a hole from 3 to 4 feet square and about 4 feet deep, so that the cylinder of the pump may be placed in same to avoid the pump freezing in winter time. After your hole is dug, screw the drive well point on to one of the pieces of pipe which we furnish, with a coupling, then screw the driving cap, which we furnish, on top of this pipe and drive this into the ground with a post maul. When the first length of pipe is driven down remove the cap, screw another piece of pipe on to the coupling you attach to the one already driven into the ground, and drive this into the ground. Repeat the operation as often as necessary until you have your pipe driven down into the water. Then screw the pipe on to the cylinder of the pump, place some manure around the cylinder of the pump in the hole which you have dug, to prevent cylinder from freezing, and you have your outfit ready for pumping. After you have your pump screwed together, all that is necessary for you to do is to lay three or four pieces of plank or board over the top of your well to answer the purpose of a platform.

THE PUMP furnished with this outfit is the same as the one furnished with our dug well outfits. We furnish this pump fitted with a combination top suitable for hand or windmill pumping, but should you prefer to buy this outfit for hand pumping, with a top such as shown in the small illustration, you can order it in this way and deduct 25 cents from prices quoted below.

WHILE THIS PUMP can be used for any depth well, providing you dig the hole to within 25 feet of the water, we do not recommend it for wells over 25 feet deep, nor in stony ground, but in places where the water is not more than 25 feet from the surface we guarantee this outfit to give excellent satisfaction. All that is necessary to ascertain when you have struck water is to procure a strong cord, attach a small piece of iron or lead to the end of this string, and after you have driven each piece of pipe into the ground, just drop this string into the piping, and you can then readily see after pulling the string out whether or not water has been reached.

BEFORE ORDERING THIS PUMP, all you have to do is to ask your neighbor who now has a pump how deep he was compelled to dig or drive his well before he struck water and you can order an outfit accordingly.

The following prices are for pump outfits complete with 1¼x30-inch 60-gauge cast head well point, 3x10-inch iron cylinder, 1¼-inch driving cap, and enough 1¼-inch galvanized pipe to complete wells for the depths specified below.

No. 42H5110¼ Pump and outfit complete with 1¼-inch pipe for 10-foot well. Weight, 96 pounds..... **$5.70**

No. 42H5111¼ Pump and outfit complete with 1¼-inch pipe for 15-foot well. Weight, 108 pounds..... **$6.25**

No. 42H5112¼ Pump and outfit complete with 1¼-inch pipe for 20-foot well. Weight, 120 pounds..... **$6.80**

No. 42H5113¼ Pump and outfit complete with 1¼-inch pipe for 25-foot well. Weight, 130 pounds..... **$7.20**

The above prices are for pumps furnished with iron cylinders. We recommend the use of brass body cylinders, which we furnish. If wanted, add $1.50 to the above prices.

TRIUMPH WINDMILL FORCE PUMP OUTFIT

COMPLETE WITH GALVANIZED PIPE

$9.30

WE PRESENT HEREWITH A PUMP OUTFIT which we believe will meet a growing demand in the pump line. These outfits are intended for use in wells of any depth up to 75 feet, where it is possible to put a cylinder down to within 10 feet of the water.

WE FURNISH THIS OUTFIT with such simple instructions that anyone whether he has ever installed a pump or not can easily put it in his well with absolutely no chance of failure. The pump is made heavy and strong, and is especially adapted for connecting it to windmills. There is a brass cock at the spout and a brass shut off cock at the back, as shown in the illustration. Buy enough 1-inch pipe to reach from pump to tank and connect it up, as we do not include this in prices given below. When you wish to pump water into an overhead tank or to any place higher than the pump, simply turn off the cock at the spout, and the water is forced through the back of pump and out through the back attachment to the place desired. This back attachment is made to connect to 1-inch pipe. When you desire to force water through the cock at the spout, turn off the shut off cock in the back attachment, and the water will go through the spout. The cock at the spout is threaded to fit ¾-inch hose, and by attaching a hose to it you have a powerful sprinkling pump.

THIS OUTFIT cannot be used in a well over 25 feet deep, unless you have an open or dug well, as the cylinder must be extended to within 10 feet of the surface of the water. Of course if your well is cased, and the casing is over 4½ inches in diameter so that it will admit the cylinder, which is about 4¼ inches over all, you could use this outfit, as the cylinder could be slipped down inside the casing.

REMEMBER, we cut and thread all the pipe and pump rod and furnish all connections, so that all you have to do is to connect it together and drop it into your well. The pump is furnished with a windmill head, but if you do not intend to use it in connection with a windmill, we can furnish it for hand use only, and if you wish it furnished this way you may deduct 25 cents from the prices quoted below. The prices given below are for complete outfits, and consist of pump, galvanized pipe, cylinder and rod, all cut and threaded to the proper length.

No. 42H5130¼ Pump and outfit complete with 1¼-inch pipe for 20-foot well. Weight, 125 pounds..... **$9.30**

No. 42H5131¼ Pump and outfit complete with 1¼-inch pipe for 30-foot well. Weight, 175 pounds..... **$10.75**

No. 42H5132¼ Pump and outfit complete with 1¼-inch pipe for 40-foot well. Weight, 210 pounds..... **$12.00**

No. 42H5133¼ Pump and outfit complete with 1¼-inch pipe for 50-foot well. Weight, 240 pounds..... **$13.15**

No. 42H5134¼ Pump and outfit complete with 1¼-inch pipe for 60-foot well. Weight, 270 pounds..... **$14.50**

No. 42H5135¼ Pump and outfit complete with 1¼-inch pipe for 75-foot well. Weight, 320 pounds..... **$15.75**

If wanted with brass body cylinder, add $1.50 to above prices.

EUREKA DOUBLE AC DRILLED WELL FO PUMP OUTFIT COMPL

$13.

WE SHOW IN ILLUSTRATION a ble Acting Deep Well Force Pump fit Complete as it when placed in a w is a very popula where it is nece bore or drill a w it is also used tensively and with of satisfaction in dug wells in de from 75 to 150 or This is the outfi is used in places w strata of the earth posed of hard r and where it is to to drill or bore water instead of a well. These pu made with a head to be atta windmills, and so that all parts platform will pass into the we when used in drill To fit a drilled w this pump it is n essary to cut off ing as in this st of other makes, a fore the casing carried up clo platform, thus ke surface water an impurities.

IN ORDER T STALL A DRILL BORED WELL, ommend that y ploy a well driller in your local town this hole for you, put in your casing desire your well cased, and after done, all that is for you to do in be insured of working pump is to the table below the outfit for the well which you h we will ship this you complete with piping and rods threaded complete with all the necessitings which you will need to com pump, and all that will be necessary to do will be to screw the different rods together, which any boy can it into your well, and you are pumping. This pump, as you will illustration, is furnished with two which make it a double acting pu we recommend this as the best drilled or bored wells, it is one of the fits which we have or can furnish for or dug wells or in a well where amount of water is required. We this pump and outfit complete with at the bottom of pipe which prevents sticks or sediment from getting into of the pump, also with hose attach spout, as this is a force pump and used very satisfactorily for sprinkling This pump is equipped with a br upper cylinder, and a brass lower both of which are 2½x12 inches in 3-inch well casing.

No. 42H5120¼ Pump and outfit with 1¼-inch pipe for 30-foot well. Weight, 172 pounds.....

No. 42H5121¼ Pump and outfit with 1¼-inch pipe for 40-foot well. Weight, 200 pounds.....

No. 42H5122¼ Pump and outfit with 1¼-inch pipe for 50-foot well. Weight, 230 pounds.....

No. 42H5123¼ Pump and outfit with 1¼-inch pipe for 60-foot well. Weight, 260 pounds.....

No. 42H5124¼ Pump and outfit with 1¼-inch pipe for 75-foot well. Weight, 300 pounds.....

The above outfits are for wells w the above table, but should you place one of these pumps in a wel than 75 feet, we make an additiona of 15 cents per foot for each foot de 75 feet. For example: If your w feet deep, an outfit for a 75-foot cost you $18.95, and you would at 15 cents per foot which would plus $18.95. Total for 100-foot

WE SAVE YOU 50 TO 75 PER CENT ON GASOLINE ENGINES.

[illegible] SPOUT IRON PUMP

[illegible] is strictly a high [illegible] pump for wells 20 feet deep and less. Only the best quality of material enters into the construction of them. They are made with revolving cap so the handle can be placed on either side of the pump. They are also equipped with trip valves, so that by raising the handle when through pumping the water runs out of the pump, which prevents it from freezing in winter time. Can furnish for lead or iron pipe connection. Iron pipe connection is sent unless otherwise ordered. Average weight, 25 pounds.

	Price
42H5200¼ No. 1 Pump for [illegible] pipe, with 2½-inch iron cylinder	$0.92
42H5200¼ No. 1 Pump for [illegible] pipe, with 2½-inch brass lined	1.73
42H5202¼ No. 2 Pump for [illegible] pipe, with 3-inch iron cylinder	1.08
42H5202¼ No. 2 Pump for [illegible] pipe, with 3-inch brass lined	1.83
42H5204¼ No. 4 Pump for [illegible] pipe, with 4-inch iron cylinder	1.42
42H5204¼ No. 4 Pump for [illegible] pipe, with 4-inch brass lined	2.46

[illegible] PERFECT CISTERN [illegible] FORCE PUMP - $4.62

Figure 20

[illegible] all the good points of [illegible] Tinker Sport Pump, [illegible] with a power to [illegible] water. These pumps [illegible] tapped in the back, [illegible] 1-inch pipe may [illegible] feed into pump, and [illegible] using the lever of [illegible] spout the water is [illegible] from going through [illegible] and is forced through [illegible] pump to a tank [illegible] cistern. We furnish [illegible] pump in two styles. [illegible] 42H5214¼ and [illegible] are furnished [illegible] cock and spout, as [illegible] in illustration, to [illegible] ¾-inch hose may be [illegible] when it is desired [illegible] for sprinkling purposes. The Nos. [illegible] and 42H5223¼ have a common spout with which we furnish a shutoff [illegible] a hose clevis instead of the cock at [illegible] These cistern pumps cannot be used [illegible] surface of the water in the well or [illegible] more than 25 feet below the place [illegible] they are to be set. We recommend for [illegible] our No. 42H5215¼, as it is brass [illegible] with ordinary care will last almost [illegible]. Average weight of these pumps [illegible] pounds.

42H5214¼ 3-inch iron body [illegible] inch pipe. Price	$4.62
42H5215¼ 3-inch brass [illegible] for 1¼-inch pipe. Price	5.31
42H5221¼ 3-inch iron body [illegible] inch pipe. Price	3.59
42H5222¼ 3-inch brass [illegible] for 1¼-inch pipe. Price	4.35

[illegible] ROTARY POWER [illegible] FORCE PUMP - $7.98

Our Acme Rotary Force Pump complete with tight and loose pulleys. A fine protection in case of fire, as it will force water 200 feet and throw a solid stream of [illegible] feet. It is an excellent pump for creameries or for any building where [illegible] can be had. It will give the best [illegible] for irrigation purposes. The drive [illegible] is made long enough to allow the [illegible] balance wheel with handle on the [illegible], so that pump may be worked by [illegible] case engine should be out of order. [illegible] is threaded for iron pipe at the end [illegible] the top where it connects to pump. [illegible] can be run at a speed of 200 [illegible] per minute without injury, al[illegible] recommend running them at about [illegible]tions. A pump of this kind should [illegible]laced more than 20 feet from the [illegible] work successfully. If wanted with [illegible]heel and handle for hand power, al[illegible] in addition to prices below. We [illegible] these pumps to do just what we [illegible] will do, but cannot advise their use [illegible] acids or hot liquids. The second [illegible] of figures in the table gives the ca[illegible] minute when pump is running at a [illegible] 100 revolutions. Pump comes com[illegible] illustrated, but without pipe or belt[illegible] pipe see page 1177, Nos. 42H5710¼ [illegible] 11¼. Weight, 75 to 150 pounds.

[illegible] 36	2	2	11x3	22.75

OUR ANTI-FREEZING IRON LIFT PUMP - $2.58

A lift pump with 6-inch stroke, which is adapted for wells not over 30 feet deep. The pump has a revolving top, so that handle may be turned to any side while pumping. The 4-foot piece of pipe which connects the cylinder to pump screws into the pump at spout, thus creating an air space between pump and cylinder, which prevents water from freezing in cold weather. The cylinder is made of iron, bored true and polished, 10 inches long and tapped to take 1¼-inch pipe. While this is an excellent pump and gives entire satisfaction for wells up to 30 feet in depth, we believe, for the small difference in cost, our customers will obtain a much better bargain by procuring our No. 42H5264¼ or No. 42H5266¼ pump. When ordering this pump remember we furnish 4 feet of pipe, as shown in illustration, to reach from platform to cylinder, so if your well is 25 feet deep you need only order 21 feet of pipe to complete your outfit. We list pipe on page 1177 of this catalog under Nos. 42H5710¼ and 42H5711¼. Average weight is 62 pounds.

No. 42H5256¼	Price
2½-inch cylinder for 1¼-inch pipe.	$2.58
3-inch cylinder for 1¼-inch pipe...	2.60
3½-inch cylinder for 1¼-inch pipe..	3.26
4-inch cylinder for 1¼-inch pipe....	3.74

TRIUMPH HAND ANTI-FREEZING IRON LIFT PUMP $3.64

Oscillating Link.

This pump has a heavy revolving cap which allows the handle to be swung to any side of the pump desired by the one pumping. This cap covers the top of the pump entirely except where the piston rod goes through, thereby preventing sticks, dirt, or, in fact, anything from falling into the well or into the working parts of the pump. The piston rod is connected to the handle with an oscillating coupling, which makes the pump work easily and prevents cramping and binding of rod. We recommend this pump and guarantee it to give excellent satisfaction in wells up to 30 feet deep, but where it is to be used in wells over 30 feet deep the cylinder must be extended to within 10 feet of the water. We also advise using a brass body cylinder in place of the iron cylinder when used in wells over 30 feet deep, as they work easier and last longer, for which we charge $1.50 in addition to the prices quoted below. See example for ordering under No. 42H5310¼ if well is over 30 feet deep. The pump is furnished complete with 4 feet of pipe and rod and a 10-inch cylinder, either 3 or 3½ inches in diameter, at prices stated below. Average weight of these pumps is 70 pounds.

No. 42H5264¼ 3-inch cylinder for 1¼-inch pipe. Price	$3.64
No. 42H5266¼ 3½-inch cylinder for 1¼-inch pipe. Price	3.98

OUR IMPROVED EXTRA HEAVY LIFT PUMP FOR FEED YARDS AND HEAVY WORK $4.40

Figure 75

Our extra heavy 6-inch stroke hand lift pump, which is especially designed for stock and feeding yards where large quantities of water are needed. The distance from bottom of cylinder to flange on pump is 4 feet. The pump is made throughout of heavy material. The cylinder is heavy and strong and capable of lifting large quantities of water. For wells up to and including 30 feet in depth, the cylinder need not be extended. All that is necessary to do is to order enough 1½-inch pipe to reach from cylinder to bottom of well. If well is over 30 feet deep order sufficient 1½-inch pipe to reach to the bottom; also allow for enough rod to extend cylinder to within 10 feet of the surface of the water at 5 cents a foot. See how to order pipe and rod in cases of this kind as explained under No. 42H5310¼. We can furnish these pumps fitted with brass body cylinder at an extra cost over prices given below of $1.50 on the No. 42H5285¼ and $1.80 on the No. 42H5286¼. Average weight, about 80 pounds.

No. 42H5285¼ 3½-inch cylinder, fitted for 1½-inch pipe. Price	$4.40
No. 42H5286¼ 4-inch cylinder, fitted for 1½-inch pipe. Price	4.55

TRIUMPH WINDMILL ANTI-FREEZING IRON LIFT PUMP $3.98

Our windmill pump with 6-inch stroke, which, when cylinder is extended into well, as explained under No. 42H5310¼ pump, will give excellent results in wells up to 100 feet deep. The piston rod works through a double fulcrum, which guides and steadies the stroke of the pump. This pump has a closed top. Although this pump is especially designed to be operated by a windmill, it is also an easy working hand pump, and as the handle is furnished just as shown in the illustration, it is easily seen what a splendid combination it is. We furnish pump complete with a 4-foot set length and a 10-inch iron cylinder, but we advise our customers to order it with brass body cylinder, for which we make an extra charge of $1.50 over prices given below. It is necessary to have this cylinder extended when used in wells over 30 feet deep, as explained under No. 42H5310¼. Average weight, is about 75 pounds.

No. 42H5276¼ 3-inch cylinder for 1¼-inch pipe. Price	$3.98
No. 42H5278¼ 3½-inch cylinder for 1¼-inch pipe. Price	4.30

TRIUMPH HEAVY HAND IRON FORCE PUMPS - - - $4.90

Our 6-inch stroke heavy hand force pump. It is complete with a 10-inch iron cylinder and a 4-foot set length of wrought iron pipe. The spout is a plain round one furnished with a shut off clevis attached to it, so that the water may be shut off at spout and forced through the back of the pump to tank or other places on the premises. We also furnish a hose clevis, so that ¾-inch hose may be attached to spout for sprinkling purposes, washing buggies, etc. We can furnish with this pump a cock at spout, which can be turned off or on by turning a lever at spout, for $1.00 in addition to prices quoted below. The shut off cock is also threaded at spout, to which ¾-inch hose may be attached. We can also furnish it with back attachment, see illustration No. 42H5310¼ below, consisting of nipples, pipe and brass lever shut off cock, for $1.10 extra. The pump just as shown in illustration is suitable for pumping water if well is 30 feet deep or under, and all that is needed in addition to pump is enough 1¼-inch pipe to reach from cylinder to bottom of well, but if well is over 30 feet deep order cylinder extended and pipe as explained under No. 42H5310¼. Average weight, about 80 pounds.

No. 42H5301¼ 2½-inch cylinder for 1¼-inch pipe. Price	$4.90
No. 42H5302¼ 3-inch cylinder for 1¼-inch pipe. Price	5.00
No. 42H5303¼ 3½-inch cylinder for 1¼-inch pipe. Price	5.05

TRIUMPH WINDMILL FORCE PUMP. $5.75

This pump is the same as our No. 42H5301¼ pump, except it is fitted with windmill head to attach to windmill. It can also be operated by hand if you desire to use it in this way. Average weight, 90 pounds.

No. 42H5310¼ 2½x10-inch cylinder for 1¼-inch pipe. Price	$5.75
No. 42H5312¼ 3x10-inch cylinder for 1¼-inch pipe. Price	5.90
No. 42H5314¼ 3½x10-inch cylinder for 1¼-inch pipe. Price	6.10

The above prices are for pumps only and do not include pipe, except the 4 feet which runs from pump to cylinder or cock shown in illustration. We can furnish cock at spout, and back attachment at the same price as quoted under No. 42H5301¼. If your well is over 25 feet deep you must have your cylinder extended, as explained below.

We give herewith an example showing how to order pipe, rod, etc., for a well 50 feet deep, so if your well is deeper all you have to do is to order more pipe and rod in proportion, and if it is not so deep order less.

EXAMPLE:	Price
No. 42H5264¼ 1 pump with 3-inch cylinder	$3.64
No. 42H5711¼ 46 feet 1¼-inch galvanized pipe at 7¾ cents a foot	3.57
Special, 36 feet extending cylinder at 5 cents a foot	1.80
Total	$9.01

DOUBLE ACTING IRON FORCE PUMP WITH THREE-WAY COCK - $10.27

Figure 100

It has a windmill head and can be used with windmill or by hand. The spout may be revolved to any side of pump desired. The upper cylinder is made of heavy seamless brass tubing, the lower cylinder is made with brass valve seats. We furnish this pump with malleable iron hose attachment for spout, so hose may be run from pump for sprinkling purposes. There is a vertical three-way cock 3 feet below the platform, by means of which water may be forced underground to tanks, reservoirs, etc., by simply running 1-inch pipe from this cock to place desired. The shutoff rod of the three-way cock is operated by a rod that reaches above pump platform. The fact that this pump has two cylinders equalizes the strain and makes the pump work easily, doing away with all jars or jolts. The downward stroke of the handle causes only one-half of the water in the cylinder to discharge, the other half being discharged by the upward stroke, creating a steady flow of water from the spout. We guarantee this pump to give perfect satisfaction in wells up to 150 feet deep, but in wells more than 30 feet in depth the lower cylinder must be extended to within 10 feet of the water. See example under No. 42H5310¼ to extend cylinder and all you need besides. Nos. 42H5323¼ and 42H5324¼ are fitted for 1¼-inch pipe. No. 42H5325¼ is fitted for 1½-inch pipe. Average weight of these pumps is 105 pounds.

No. 42H5323¼ With 2½-in. cylinder	$10.27
No. 42H5324¼ With 3 -in. cylinder	10.40
No. 42H5325¼ With 3½-in. cylinder	10.67

DOUBLE ACTING DRILLED WELL FORCE PUMP - - $9.63

This pump is adapted for drilled wells of small bore of any depth, equipped with windmill head and constructed so that all its parts below the platform will enter and pass into the casing or drilled hole. To equip a drilled well with this pump it is not necessary to cut off the casing, and therefore the casing may be carried up close to the platform, thus keeping out surface water and other impurities. It is equally satisfactory in open or dug wells, and is a strictly high grade, satisfactory pump. The upper cylinder is brass lined, the lower cylinder has brass body. Pump is equipped with strainer hose attachment without additional charge. Owing to its double acting cylinder this pump operates very easily by hand and may be used as a hand force pump as well as windmill pump.

In ordering this pump for a deep well the lower cylinder should be dropped to within 10 feet of the bottom of the well. See example under No. 42H5310¼. Average weight, 125 pounds.

No. 42H5332¼ 2½-inch brass cylinder for 1¼-inch pipe. Will go into a 3-inch cased well. Price	$9.63
No. 42H5333¼ 3-inch brass cylinder for 1¼-inch pipe. Will go into a 3½-inch cased well. Price	9.75
No. 42H5334¼ 3½-inch brass cylinder for 1½-inch pipe. Will go into a 4-inch cased well. Price	10.30

UNDERGROUND VALVE IRON FORCE PUMP - $7.90

This pump is especially designed for 2-inch tubular wells, but can be used in open or drilled wells with 1¼-inch pipe. By use of the wheel in the top of the spout the water can be discharged either through the spout or through an underground pipe, which may be attached at valve on bottom of pump. It differs from and is superior to other three-way valve pumps, because the operating screw, which is brass, is below near the valve and not at the gooseneck, consequently there is no possibility of the pump freezing up in cold weather. The pipe on the right forms the air chamber. When this pump is used for tubular wells it is made with a cap at the stuffing box, which, when unscrewed, leaves an opening large enough to pull the plunger up through without disconnecting the pipe or moving the pump. The pump is threaded to take 2-inch pipe, but may be bushed to take as small as 1-inch. The discharge is fitted for 1-inch pipe and the gooseneck is fitted with a clevis for ¾-inch hose. Prices stated below are for pump only and do not include any pipe, cylinder or rod. For pipe see No. 42H5710¼ and No. 42H5711¼, and for rod see No. 42H5630. Cylinders are listed under Nos. 42H5528¼ to 42H5552¼. Average weight is 120 pounds.

No. 42H5352¼ 6-in. stroke. Price	$7.90
No. 42H5353¼ 10-in. stroke. Price	8.35

EXTRA HEAVY WINDMILL IRON LIFT PUMP STANDARD $3.11

This is a lift pump only and cannot be used for forcing water. If a force pump is wanted, order No. 42H5347¼ or No. 42H5351¼. This standard is very satisfactory if used in pumping water for stock or feed yards. It is much heavier than our common windmill pump and the spout is higher from the platform. The size pipe ordinarily used with it is 2 inches, but we can furnish it for 1½-inch or 1¼-inch pipe. Prices given below do not include pipe, cylinder or rod, which you must have to make a complete outfit. For pipe see No. 42H5710¼ and No. 42H5711¼, and for cylinders see Nos. 42H5528¼ to 42H5552¼. The rod is listed under No. 42H5630. Average shipping wt., 75 pounds.

No. 42H5349¼ 6-inch stroke...**$3.11**
No. 42H5350¼ 10-inch stroke... **3.57**

EXAMPLE—If you desire an outfit for a 40-foot well, select the pump you want, either No. 42H5349¼ or No. 42H5350¼, then include with this 40 feet of 2-inch pipe if you wish to use a 4-inch, or 40 feet of 1½-inch pipe with 3½-inch cylinder, or 40 feet of 1¼-inch pipe if any smaller size cylinder than 3½ inches is to be used. Select the kind of cylinder wanted and allow for extending the cylinder 30 feet, at 5 cents per foot, or $1.50.

HEAVY ACME IMPROVED WINDMILL IRON FORCE PUMP STANDARDS - - $3.96

This Standard is equipped with a brass stuffing box and the piston rod works through a special bushing which prevents it from wearing out easily. There is a threaded outlet directly back of spout on the barrel of the pump into which 1-inch pipe may be screwed. This pipe may be run to a tank or reservoir and water forced through it to same by attaching the shut off clevis which we furnish on the spout. This is a very much heavier standard than the ordinary pump is equipped with and is especially designed for deep wells. **Prices quoted are for standard alone and do not include pipe, cylinder or rod, and it cannot be used without these parts.** For pipe see Nos. 42H5710¼ and 42H5711¼; for cylinders see Nos. 42H5528¼ to 42H5552¼, and for pump rods to be used in extending cylinder see No. 42H5630. For an example as to how to order an outfit of this kind we refer you to No. 42H5349¼ on this page. Average shipping weight is 80 pounds.

No. 42H5347¼ 6-inch stroke for 1¼-inch pipe. Price.....**$3.96**
No. 42H5351¼ 10-inch stroke for 2-inch pipe. Price..... **4.30**

EXTRA—If a back attachment is wanted, such as is shown and described under No. 42H5310¼, allow $1.10 additional to prices given above, and if a shut off cock at spout is desired, allow $1.00 in addition to prices above.

WOOD FARM PUMPS - - - $2.48

Made from the best selected stock; thoroughly painted, striped and varnished and furnished with iron handle brackets and iron spouts. The plunger, which is the vital part of a suction pump, is of the very latest improved pattern. Our wood pumps are adapted for wells not more than 30 feet deep. If well is of greater depth, we recommend that you select one of our iron pumps as described on page 1175 and on this page. Besides the pump, order enough tubing of size to match pump to reach from the bottom of pump to bottom of well. Tubing comes in lengths of 12 feet or less. When more than 12 feet of tubing will be required to reach to the bottom of the well order coupling for each joint to connect the tubing. Average shipping weight, about 55 pounds. Outside measure, 6x6 inches.

	Length	Price, Plain Pump	Price, with Porcelain Lined Cylinder

PERFECT IMPROVED PURIFYING PUMP - $4.35

Simplest pump construction in the world for raising water and at the same time purifying it. It is adjustable to any well or cistern. It is of very durable construction and materials; operates with an endless chain made from the best of galvanized wire. We do not recommend them for use in wells or cisterns beyond 30 feet deep. For wells of greater depth we urge you to purchase one of our iron pumps as described on page 1175 and on this page. You will note by the illustration that buckets and chain run through a bearing which hangs in the water at the bottom of the well, and in ordering this pump you should order equipment which will reach within 2 feet of the bottom. This pump always furnishes the water from the bottom, as no water enters cups until after they have passed under the bearing at the bottom and begun the upward movement, when the air escapes and they are filled with the best and the coldest water. The pump comes complete with chain, cups, lower bearing, ready to be placed in wells of different depths, as indicated in price list below. Furnished with either steel or wood curb. Average weight, about 75 pounds.

		Wood Curb	Steel Curb
No. 42H5442¼	Price for 10-ft. well.	$4.35	$ 6.45

No. 42H5445¼ **Extra Galvanized Buckets and Chain.** Price, per foot.....**9c**

OUR NEW ACME TANK PUMP, $5.25

THIS STRAINER FREE.

This pump is made on entirely new principles, the cylinder being placed in a horizontal position, which gives great strength and simplicity. It is strictly a double acting pump, sucking water at each stroke of the piston. Cylinders 5 inches in diameter, with a 5-inch stroke. Openings are 2 inches in size for both suction and discharge and have an extra connection for the discharge pipe, so that 1-inch hose may be used if desired, which is of great advantage for sprinkling or fire protecting purposes. The spout is attached to the top of the pump and is reversible and so arranged that the largest pail will fit under the spout, thus avoiding the use of lead hose when a pail of water is wanted. It has a capacity of two barrels a minute, and will force water 60 feet. It is equipped with brass valve seats, and we can guarantee it to be the equal of any pump of this style ever placed on the market. There are tank pumps on the market sold at lower prices than ours, but, quality considered this is by far the cheapest pump to buy. Weight, about 90 pounds.

No. 42H5386¼ Price, complete, as shown in illustration. No hose.....**$5.25**

No. 42H5657 5-Inch Crimped Plunger Leathers for above pump.
Price, per set of two....**56c**

No. 42H5389¼ Pump complete with 20 feet 2-inch suction hose. Price.....**$9.85**

INVINCIBLE RUBBER BUCKET PUMP - - $2

These pumps are so well known that a lengthy description is unnecessary. We furnish them in two styles, the wood curb with wood tubing (the curb and tubing being made of the best selected stock for this purpose) and steel curb and steel tubing. The steel curb is made of 24-gauge galvanized sheet steel and is the one we recommend to our customers, as it will outwear a wood pump and is much stronger. The steel or wood curbs are nicely painted and are the equal of any pumps of this kind on the market at any price. Pumps are complete for the depth wells specif with galvanized chain, rubber buck We do not recommend these pumps over 20 feet deep. Average weight, For wells of greater depth see our listed on these pages.

TRIUMPH WINDMILL REGULATOR PUMPS WITH UNDERGROUND VALVE - $12.70

This pump is especially designed for use in connection with a windmill, and will automatically keep the water in an elevated storage tank, or a pneumatic tank, at any height or pressure that may be desired. The pump is substantially built throughout, the regulating cylinder being made of seamless brass tubing, while the remainder of the pump is made of the best grade of gray cast iron, with the exception of the stuffing box nut, rod, etc., which are manufactured from first quality brass. This pump not only raises the water to any point desired, but pulls the windmill out of gear when the tank is full, and holds it in this position until the water is lowered, when the regulating device automatically throws the mill back into gear to resume pumping until the tank is again filled. This pump will prevent tank from overflowing, and at the same time keep it full without any attention whatever; also prevents undue wear to the windmill and pump. By means of the weight and lever the mill may be thrown out of gear when any pressure in the tanks, or any height of water that may be desired, is obtained. This pump may be operated either by windmill or hand power and the water can be piped to a tank from the underground valve or led through the spout at the top by simply operating the three-way cock. Approximate weight, 160 pounds.

No. 42H5354¼ Price, complete, with 2½-inch iron cylinder.....**$12.70**
No. 42H5355¼ Price, complete, with 3-inch iron cylinder..... **15.50**

If brass body cylinder is wanted in place of iron cylinder listed, add $1.50 to above prices.

Standard Suction Hose, to be Used With Above Pump.

Very strong and heavy.

With smooth bore to reduce friction, inserted spring steel wire to prevent collapsing and enlarged ends to fit over pump connection. Sold in 10, 15, 20 and 25-foot pieces only. Size inside, 2 inches. Weight, per foot, 1 pound. Requires 2¼-inch clamp.

No. 42H5391¼ Standard Grade. As illustrated. Thick walls, good quality rubber and duck. Best hose made for the price.
Price, per foot.....**23c**

No. 42H5390¼ Extra Grade. Green braided cotton cover. Equal to the best grades sold by others.

HYDRAULIC RAM, $4.8

The Acme Hydraulic Ram is used to elevate water to tank or reservoir or to force water a long distance from the of supply. Set this pump below a spring or stream of w distance of from 25 to 50 feet. Place the ram 1 foot b level of the spring for every 10 feet that you desire to a water. Bear in mind that the ram only lifts about one-s the water which runs into it, even under the most favor ditions, the balance of water runs out of the ram at the the operation of lifting and is, of course, wasted. Dere table shown below which ram you will need. Order ac for your purpose, prices of which will be found a 42H5710¼ and 42H5711¼ on page 1177. All you have to connect the supply or feed pipe to ram and place one spring. Connect the discharge pipe to the other side of run it to the tank into which you wish the water to further information we will send upon request our Hydr Circular more fully describing ram.

Little Giant Pipe Holder.

No. 42H5612¼ $1.90 Something new in pipe holders. Will hold either 1, 1¼ or 1½-in. pipe. Dog has corrugated chilled surface; pipe cannot slip. Well made, nicely finished. A practical tool. Weight, 30 pounds.
Price $1.90

Iron and Brass Body Pump Cylinders.

By means of the cylinder water is raised, and unless the cylinder is well made no good results can be obtained. A good cylinder must be bored true and plunger must fit accurately. Valves must be simple and durable. The cost of repairing a cylinder is usually more than its first cost, so it pays to get the best. Our cylinders are the best that skilled workmen can produce and our prices as low as equally well made goods can be sold for. Cylinders 2 inches in diameter are fitted for 1-inch pipe. Cylinders 3½ inches in diameter are fitted for 1½-inch pipe. Cylinders 4 inches in diameter are fitted for 2-inch pipe. All others fitted for 1¼-inch pipe. We can furnish these cylinders in iron or brass body. The brass body will outwear two of the iron cylinders. Therefore we recommend them.

IRON BODY CYLINDERS.

Price, 1½-inch pipe 25c

Tubular Well Cylinders.

These cylinders are designed to be dropped down into pipe of the sizes we list below. The tubular cylinder has many advantages over the common cylinder, a few of its fine points we give here. It has no outside shoulders or caps and this enables it to be slipped into pipe and set at any desired distance. This also makes it easy to remove it for repairing purposes or to take it up out of one well or place it in another. The only tool required is the seating tool listed below and enough 1-inch pipe to lower seating tool to place where cylinder is to be placed. The body is made of seamless drawn brass tubing with brass valves, which last longer than iron cylinders. Stroke, 12 inches. Not made smaller than 2 inches.

No. 42H5592¼ Size, 2 inches. Weight, 7 pounds. Price $2.35
No. 42H5593¼ Size, 2½ inches. Weight, 9 pounds. Price $3.89
No. 42H5594¼ Size, 3 inches. Weight, 12 pounds. Price $5.19

Seating Tools.

These are made of iron and used for placing cylinder in position in pipe, also for drawing cylinder up out of well. Order size to correspond to size cylinder desired. Average weight, 2 pounds.

No. 42H5600 2 -in. cylinder. Price. 25c
No. 42H5602 2½-in. cylinder. Price. 38c
No. 42H5603 3 -in. cylinder. Price. 50c

Radiant Acetylene Gas Plan

SAFE, ECONOMICAL, EFFICIENT, ACKNOWLEDGED THE BEST SUBSTITUTE FOR SUNLIGHT.

Did you ever stop to realize what a gas plant in your own home would mean to you? Ever realize the convenience of just striking a match at any hour of the night, turning on the gas and having your room filled with light—not such light as is given by a kerosene oil lamp, but with a beautiful white light which brightens every nook and corner in your room? Acetylene gas can also be used for cooking with excellent satisfaction.

Up to this time we have avoided the question of acetylene lighting as we were unable to procure a machine which we could with safety recommend to our customers, because other machines were found to necessitate the placing of the generator in the basement, a plan in which there is always more or less danger. But our Radiant outfit eliminates all possible danger because our generator is buried in the yard, away from the house; and we therefore most highly recommend it.

We are so confident that you will be more than pleased with a Radiant outfit when installed that we are selling them under the following guarantee: You can install this outfit at your home, use it for sixty days, and if by that time you are not perfectly satisfied with it in every way, you can return it to us at our expense and we will return you the purchase price, together with all freight charges you paid.

OUR ACETYLENE GAS LIGHTING PAMPHLET AND ESTIMATES FREE.

If interested in Acetylene gas lighting, kindly write us for our Acetylene Gas Lighting Pamphlet, which also shows fixtures, gas range plates. Give us a rough sketch of your house, showing the numb rooms and height of the ceilings and about where you would like to the fixtures placed. Also give us a general idea of what kind of fi you desire and we will be glad to make up an estimate, showing ex what the outfit will cost you complete. This will not put you unde obligation to buy.

THE EVER READY PNEUMATIC WATE SUPPLY OUTFIT

YOUR OWN WATERWORKS.

A RELIABLE FIRE PROTECTI

Great Boon to Country Homes. Provides Running Water, Hot or Cold, for Your Kitchen or Bathroom or Anywhere on Premises. Protection Against Fire. Simple in Construction, Easy to Install, Easy to Operate, Low in Price

$42.00 AND UP

Our Pneumatic Water Supply Outfit brings you all the conveniences of a city waterworks system. Water in the kitchen, for the bathroom or anywhere in any of your buildings.

Our Ever Ready Pneumatic Water Supply Outfit as shown in this illustration is the system we recommend to our customers where the outfit is to be operated by hand, and a small quantity of water (not over 160 gallons per day) is required. This system will draw water from a well or cistern where the surface of the water is not a greater distance than 25 feet below the pump. The outfit consists of the following material, and is all ready to set up and use.

One 30-inch by 6-foot vertical pneumatic tank, total capacity of 220 gallons, and a working capacity of 160 gallons.

One special horizontal double acting force pump with 3-inch brass lined cylinder and hydro-pneumatic cylinder attached.

One water gauge complete.

One pressure gauge registering up to 100 pounds.

One 1-inch check valve.
One 1-inch gate valve.
One ¾-inch stock and waste cock.
One ½-inch hose bibb. (All pipe and fittings cut and threaded, as shown in the illustration.) One working blue print. One set of instructions.

No. 42H2044½ Ever Ready Pneumatic Water Supply Outfit, as described above, complete with 30-inch by 6-foot tank. Price.....**$47.50**

No. 42H2043½ Ever Ready Pneumatic Water Supply Outfit, same as described above, complete with 24-inch by 6-foot tank; total capacity, 140 gallons; working capacity, 100 gallons. Price..... **42.00**

No. 42H2046½ Ever Ready Pneumatic Water Supply Outfit, as described above, complete with 36-inch by 6-foot tank; total capacity 315 gallons; working capacity, 225 gallons. Price..... **57.00**

The Ever Ready Pneumatic Water Supply Outfit is certainly a boon to residents of smaller cities who have heretofore been compelled to depend on the attic tank for their sup of water. The unhealthy condition of the water after it had stood for a week in a rusty ta was a source of endless danger to the health of the family, while the supply of water limited, and no end of trouble experienced in keeping the tank filled and in running order. Th being no pressure in the tank, people realized they had no means of fighting fire, and that th homes were in constant danger of destruction. Little wonder then that the Ever Ready Pneuma Water Supply Outfit was enthusiastically received and has met with a tremendous sale. With a installation of the Pneumatic Outfit you have a complete waterworks system of your own. Mo plumbing fixtures may be installed and an abundant supply of pure running water provided a kitchen sink, the lavatory and the bath tub, affording splendid convenience in the home, toge with the pleasure and benefits of an invigorating bath after your day's work is done. Wa can also be supplied in the barn yard for your horses and cattle; your lawn may be prop sprinkled, buggies washed and other needs nicely provided for. Absolute protection from is afforded by the Ever Ready. You will have on an average 30 to 50 pounds pressure in tank, which is sufficient to throw a strong stream of water with a hose, high over any ordinary or village home. Notwithstanding the benefits and comforts to be derived from such a the cost is comparatively small. A complete outfit, including every necessary item, will only from $42.00 up, depending on the size.

The Ever Ready System is very simple in construction, consisting merely of an airtight substantially built tank, a pump, so constructed that either water only, or air and water be forced into the tank, and the necessary valves, fittings, gauges, etc., that go to make up complete outfit. When water is pumped into the tank (about ten minutes' work in the morn will furnish the day's supply) it forces the air up to the top and as air is readily compres a large quantity can be forced into a small space. By pumping water into the tank until it about two-thirds full you will have a pressure on the system of from 15 to 20 pounds. water is drawn from the system, the air expands and gradually forces the water out thro the discharge pipe. By pumping air into the tank with the water, any pressure that may desired can be obtained. As a column of water 27 inches high is equal to 1 pound pressu you will be able to draw water from faucets located on the second floor, say 20 feet, above pneumatic water tank, when the gauge of the tank registers between 10 and 12 pounds.

We sell a large number of systems every year, and are thereby able to reduce the fac cost to the minimum. We add but one small profit to the actual manufacturing cost, and will consequently find our prices on all these outfits exceptionally low. If you are interested this modern up to date water supply system, write for our Special Plumbing Goods Catalog. advise us as to the approximate amount of water you will use per day, and of how many mem your family consists; also tell us whether the source of supply is a well, cistern, or spring if a well, the distance from the surface of the ground to the surface of the water, the depth of the well, and its diameter. With this information we will be able to send you an item estimate of the cost, together with complete information regarding the outfit that will give the best results. Our experts will give your letter their immediate attention, and a compl estimate and specifications will be sent to you by return mail.

With every Ever Ready Pneumatic Water Supply Outfit we furnish a one-year guaran which protects you against defects, poor workmanship, or inferior material, and also guaran the outfit to give perfect satisfaction. **Write for our Special Plumbing Goods Catalog.** A po will bring it.

ncrease Your Crops by Spraying Your Fruits and Vegetables

ORDER FROM THIS PAGE, OR WRITE FOR OUR SPRAYING MACHINE CATALOG

The value of sprayers in the exterminatisn of deadly plant vermin and the preventing ure of black rust, fungus growth and other diseases of plants, has been proven ed doubt by investigation and experiments by government experts during the past years. The results of their investigation, besides a vast amount of other information ting plant diseases and pests and their destruction by spraying, are published in our aying Machine Catalog, a copy of which we shall be pleased to send you if you are ll interested in the subject of spraying. The ravages of disease and vermin had ally decreased the yield, as well as destroyed the trees and plants themselves, before ent was aroused and scientific tests made which have developed the most practical ods of spraying and the best liquids to use. Proper and timely spraying will double yield as well as improve the quality of fruit and vegetables, by producing a healthy, ual plant growth. It will also kill all vermin and even exterminate the eggs and larva before they reach a harmful stage, and has proven very successful in the prevention and treatment of disease.

In these pages we illustrate and describe a few of the sprayers we handle, any one of which will be found perfectly satisfactory for the work intended. If you are interested in the subject of spraying, we advise you to write for our Special Spraying Machine Catalog, which contains a complete line of power and field sprayers, together with full instructions on spraying, when it should be done and what solution to use to exterminate the various insects, etc. The catalog is free for the asking, and will be found a valuable book of reference on the subject of spraying.

For a complete line of Power and Field Spraying Outfits send for our Spraying Machine Catalog.

ower Sprayer Operated by Gasoline Engine

This Power Sprayer outfit includes our Acme Double Acting Spray Pump mounted complete with 2-horse power gasoline engine. A substantial, powerful, reliable and highly efficient equipment for all spraying purposes. After having given this outfit an unbiased and fair trial, we are confident you will pronounce it the peer of any spraying outfit you have ever used or ever heard of. This, perhaps, to you sounds like a pretty broad assertion. To prove this assertion and as evidence of the explicit confidence we have in your judgment and our pump, let us ship the outfit to you on an unconditional ten-day trial.

GASOLINE ENGINE. Our Economy Gasoline Engine is thoroughly described on page 1184. Capacity, 2-horse power. Style, stationary. Iron base. Hopper cooled, self contained galvanized tank. 6x4-inch plain pulley. Guaranteed.

PUMP. Designed, constructed, tested and guaranteed for spraying purposes. No expense has been spared to make this pump the very best in the market. Capacity, 5 gallons per minute, or capable of supplying from two to four leads of hose with single or combination nozzles.

Only the very best grade of materials are used in the construction of this pump and connections. Strong and smooth gray iron castings, and best quality No. 1 brass.

CYLINDER. Is 2½ inches in diameter and of correct length to give a 4-inch stroke. Is fitted with seamless drawn brass lining securely inserted and easily removed by simply unscrewing, and can thus be replaced by a new lining. This is an essential feature, as the insoluble substance in the different spraying solutions acts on the lining and makes replacement necessary. Suction openings are provided at both sides of pump underneath the cylinder. Discharge can be taken out at either side of air chamber. This arrangement makes it possible to make connections from the same side of pump or from both sides as conditions may require. The heads attach to flange on cylinder with four ⅜-inch cap screws. The joints are perfectly tight, both the flange and heads being faced and fitted with rubber gaskets.

VALVES. The four valves are entirely of brass, ground on to brass valve seats in separate boxes and in pairs, one set elevated to retain prime. All valves are accessible and can be easily removed by unscrewing caps.

PLUNGER. Consists of three cast iron followers machined to fit the cylinder accurately, and are equipped with a special high grade hot water packing. Is attached to brass covered piston rod operating through brass stuffing nut in head.

PRESSURE GAUGE. A pressure gauge is fitted to the discharge pipe, as is also a relief valve. This valve can be adjusted to any desired pressure, as indicated on the pressure gauge, and when the pressure in the pipe reaches the point for which the valve is set the valve opens and allows the liquid to flow back to the supply. This safety device eliminates any possible chance for damage which might otherwise result to either the hose or pump.

FULCRUM HEAD. Serves as a guide for piston rod, preventing friction in the stuffing box and consequent wear.

DROP FORGED CRANK SHAFT. Suitable babbitted box bearings support shafts for gears. Pitman bar connecting crank shaft with piston of pump can be released and pump operated by hand with lever provided for that purpose. Pump can be removed from skid, as can also the engine, by simply loosening lag bolts in base.

Pump tested under 250 pounds pressure. Safe working pressure, 200 pounds.

Increase Your Crops by Irrigation

LET OUR IRRIGATION EXPERTS TELL YOU WHAT YOU NEED. INFORMATION ABSOLUTELY FREE.

Did you ever stop to think how much your success as a farmer depends on the moisture the soil gets? Do you know that some of the dryest and most arid districts in the Southwestern states are now producing splendid crops year after year because they are properly irrigated?

Crop growing by irrigation has made wonderful strides in the past few years and will make still further progress in the future. It is hardly necessary for us to advance any arguments in favor of irrigation, as we believe every farmer knows that his crop yield depends to a great extent on the amount of moisture his land gets.

Methods of irrigation have been discussed pro and con and there are several different ways of securing the same results and we believe that the majority of farmers are hesitating to install an irrigating outfit, not because they don't appreciate its advantages, but because they do not know what outfit to buy. For this reason we have established a Department of Irrigation, composed of irrigation experts who are thoroughly acquainted with all conditions throughout the United States and with the different methods of irrigation. **The advice of these experts is yours for the asking.** We make no charge and will gladly figure out a complete outfit for you.

The illustrations on this page show but a few of the outfits we are prepared to furnish. Our prices will save you considerable money over what you **would have to pay** elsewhere and every outfit is guaranteed absolutely to give satisfactory service and is shipped on trial, so that if it does not prove satisfactory, you can return it and get your money back, together with any freight charges you paid.

If you are interested in irrigation, write and tell us your conditions, describe your farm, tell us how many acres of land you have, where you get your water, what crops you expect to grow and the kind of soil in your neighborhood and our experts will figure out what you need and give you prices on a complete outfit.

Address all letters to **Department 11, Mechanical Engineers, SEARS, ROEBUCK AND CO., CHICAGO, ILL.**

Acme High Grade Barrel Sprayin and Whitewashing Pump, $5.73

THE BEST PUMP OF ITS KIND EVER MADE

Without question the most serviceable and up to date pump of this type on the market today, regardless of The pump is equipped with two cylinders, the upper cylinder being made of brass, and the lower cylinder is lined. It is also equipped with brass plungers, brass check valves and brass valve seats. All working parts that in contact with the liquids used are brass. The body of the pump is a large air chamber, and after the pump is pressure it will discharge a steady spray, lasting two minutes or more, with one or two strokes of the handle making it a very easy pump to operate. On account of being equipped with two cylinders, this pump is double On the upward stroke of the pump half of the solution in the piping is discharged, and on the downward stroke other half is discharged, thus making a continuous spray, a point which should receive due consideration prospective purchaser of a pump. Each pump is fitted with a jet agitator. This is a general purpose pump and be used for spraying, whitewashing, washing windows and buggies, extinguishing fires, sprinkling lawns, flowers etc.; in fact, in any place where water is needed, this pump can be used to great advantage.

We furnish this pump with a shut off valve at the nozzle, so that the spray can be shut off by simply turning valve. If others quote you a lower price than ours compare the weights given for our pump with the weights of sold by them.

NOTICE—Price does not include barrel.

$9.35 Acme Improved Sprayer

For Whitewashing, Painting and General Purpose Spraying.

No. 42H5503¼ Simple in construction, mechanically perfect, the best all around sprayer ever put on the market. Has no equal for spraying all kinds of trees, plants, shrubs, vines, etc., and is of the greatest value for stock and poultry farms, nursery men and florists, fruit growers, cold storage plants, factories, packing houses, warehouses; in fact, any and every place which requires the application of disinfectants, insecticides, fungicides, whitewash or cold water paint. This machine produces the strongest power and when used with extension pipe the tallest trees can be reached. **The reservoir is made of heavy galvanized iron and holds 8 gallons of mixture.** The cover is reinforced and so designed that **the pump may be instantly removed, thus exposing all working parts.** The pump is **made entirely of heavy brass, except the handle parts.** There is an agitator which is operated by the handle and which keeps the solution thoroughly mixed about the suction opening. This pump is fitted with 8 feet of three-ply discharge hose, stop cock and two 4-foot lengths of extension pipe, with **latest pattern Vermorel nozzle.** Five extra inserts are furnished with each nozzle, and they can be replaced as often as necessary to keep the spray of uniform size. The machine loaded is **easily carried** from place to place, and has a decided advantage over sprayers that are mounted upon barrels or other large reservoirs. Weight, 45 pounds. Price.....**$9.35**

$3.60 Acme Compressed Sprayer

Self Operating or Automatic.

We can thoroughly recommend this to be the highest type of a compressed air sprayer manufactured or placed on the market. It is a combination of all the good points of every sprayer of its kind that has been introduced, and we know that it will give excellent satisfaction to our customers. It is simple in construction, perfect mechanically, made of the very best material throughout, and will stand the strain of high pressure and hard usage. During the last few years we have sold thousands of these pumps and we have yet to hear from our first dissatisfied customer. The pump is easily removed for cleaning and there is nothing to get out of order. It has a capacity of 3½ gallons and produces ample pressure for spraying all kinds of fruit trees, and is unexcelled for spraying potatoes, tobacco, tomatoes, etc., in patches of 5 acres or less. Enough compression is obtained with eight to ten strokes of the piston to spray for several minutes a mistlike spray or solid stream. We furnish this spray with 2 feet of hose, and we advise our customers to purchase the brass sprayer which is non-corrosive and will practically wear a lifetime. We list this sprayer with common cock and automatic cock, but recommend the use of the brass sprayer with the automatic cock. Extension pipes can be screwed to the nozzle and extended to any length desired. Weight, 7 pounds.

No. 42H5501¼ **Galvanized Sprayer with common cock.** Price **$3.60**

No. 42H5555¼ **Galvanized Sprayer** with automatic cock. Price **4.15**

No. 42H5502¼ **Brass Sprayer** with common cock. Price **5.25**

No. 42H5556¼ **Brass Sprayer** with automatic cock. Price **5.80**

No. 42H5557 **2-Foot Extension Pipes, galvanized.** Price, each..... **.22**

No. 42H5558 **2-Foot Extension Pipes, brass.** Price, each..... **.30**

Notice—This sprayer cannot be used for whitewashing.

Spraying Pump, $1.98

No. 42H5520 The construction of the pump requires the pressure on the handle to be all done on the down stroke, the pressure on the cylinder acting as a cushion, and partly forcing the handle up again, thus making it very easy of operation, requiring no foot rest nor other device to steady it. The hose can be detached at top of pump and a nozzle attached in its place, either for spraying, sprinkling or throwing a solid stream. It is also arranged so that a small stream is discharged with great force from the bottom of the pump into the bucket or barrel, serving to thoroughly agitate the mixture at all times when the pump is in use. For washing windows, buggies, etc., it is very useful. Weight, about 5 lbs. Price..**$1.98**

Bamboo Extension Rod.

No. 42H10009¼ To be used in reaching tall trees. A great advantage over the ordinary extension, as they are light, and the inner tubing being made of brass prevents collection of scale. Length, 9 feet. Price.....**$2.00**

Brass Strainer.

No. 42H10007 Made of brass and should be used to strain all mixtures before placing them in sprayer.
Price **75c**

Hercules Nozzle.

No. 42H10039 One of the latest and best nozzles ever placed on the market. One of the most important things for successful spraying is a satisfactory nozzle and we know the Hercules will give universal satisfaction.
Price **$1.00**

Marvel Spray Pump Fire Extinguisher

This is a combination spray pump and fire extinguisher, one which we know will give our customers splendid satisfaction as a general purpose sprayer. It is equipped with a heavy brass pump, and all valves, etc., that come in contact with materials used in spraying are brass, and therefore will not get out of order. This pump is furnished with two nozzles, one for fire extinguishing purposes or general purpose sprinkling, which will throw a stream from 40 to 50 feet, 2-foot extension pipe, and also with a spraying nozzle for spraying purposes. The pump is made of galvanized iron, nicely painted, and has a capacity of 4½ gallons.
No.42H5519¼ Price.$4.40

Wonder Sprayer.

The Little Wonder Sprayer is adapted for spraying all kinds of vegetable plants. It sprays a fine mist or coarse spray, which is accomplished by turning the little brass nozzle backward or forward. It is furnished with brass balls. Will spray up or down and takes the place of any kind of atomizer made. Is simple in construction, nothing to get out of order; furnished in either tin or galvanized iron. We know anyone purchasing this sprayer will be more than pleased with it. Capacity, 1 quart.

No. 42H5494 Tin. Price.....**48c**

arm Air Furnaces for Modern Heating and Ventilating

M AIR FURNACES HEAT YOUR HOUSE, VENTILATE IT AND KEEP THE WARM AIR PURE AND IN CONSTANT CIRCULATION

ATER VALUES in house heating and ventilating furnaces were never before offered by us or any other furnace manufacturer. We heat your We ventilate your house. We keep the warm air pure and in constant circulation. manufacturing the best line of hard coal, soft coal and wood furnaces that can be ughtsre, and at prices so low as to attract orders from dealers everywhere on account ich quality, scientific construction, durability, efficiency in ventilative heating and the ces we make.

5 AND UPWARD according to equipment and fuel used. These money saving and "live and let live" prices are the actual cost of mate- d labor, with only our one conscientious margin of profit added.

WRITE FOR OUR SPECIAL CATALOG of Warm Air Warming and Ventilating Furnaces with question blank or information sheet. Better still: send us a rough sketch of the floor plan of your house, showing points of the compass or which direction the house fronts, giving careful inside measurements of all rooms in the house, regardless of which are to be heated, showing the location of the doors, stairways, offsets, bay windows, etc., size and sketch of cellar, showing under what rooms it is located, giving location and size of chimney flue and height of cellar, and we will give you an exact estimate of cost, including all wall pipes, basement pipes, registers and everything necessary to heat the house properly to an average of 70 degrees in the coldest weather. If you are building a new house or remodeling an old one you cannot afford to be without our prices. Get our estimate now and order early, as it always requires a week to get out your order, and in the fall rush it sometimes takes from two to three weeks.

ACME HUMMER

Bituminous Soft Coal or Wood Furnace at $30.95 to $77.45

with double galvanized iron casing, tee, check draft and chains, cement and bolts; we offer this Acme Hummer Heating and Ventilating Warm Air Furnace with broad top fire pot for soft coal and wood. The fire pot is so broad that long sticks of wood can be put in when you desire to burn this fuel. The Acme Hummer is a dome furnace and has the largest and heaviest wrought steel combustion dome of any furnace on the market, making it a perfect soft coal burning and a thoroughly durable, quick and powerful heater.

ACME HUMMER FURNACE FOR SOFT COAL AND WOOD.

OUR NEW ACME UNIVERSAL FURNACE

This furnace represents the highest type of construction. It will burn successfully both hard and soft coal and will give equally good results with either fuel. There is considerable demand in many sections of the country for a furnace with an all cast radiator, and our Acme Universal has been especially prepared to fill this want. The general construction of the furnace is somewhat similar to our Acme Tropic, which heretofore has been our best furnace, but with the all cast radiator the Acme Universal is the superior of the two. We guarantee the Acme Universal to be unsurpassed by any warm air furnace on the market today in efficiency, durability and price. We will gladly figure on this furnace to heat your home if you will send us the necessary floor plans and specify that you want our new furnace with the cast iron radiator.

HEAT YOUR HOME WITH A HERCULE
HOT WATER OR STEAM HEATING SYSTE

Heats Every Room to an Even Temperature, Avoids Dust, Ashes or Coal Gas in Living Rooms, Save Household Furnishings. A Great Saver of Time and Labor. Easily Installed by Anybody in Any House. Can Be Filled With a Bucket.

Write for Modern Heating Catalog Free on Request

Estimates Are FREE For The Asking

Consider These Additional Advantages:

No carrying coal upstairs.

Unnecessary to remove ashes every morning.

Fire needs attention but twice daily—morning and evening.

No dust, soot, ashes or coal gas in living rooms.

Great saving in carpets, rugs, curtains and other household articles.

Much less house cleaning.

Chances for colds and sickness greatly lessened, due to freedom from dampness and variation of temperature.

May save you several hundred dollars in doctor's bills.

If you have a running water system of any kind, you can put a coil in the fire pot of the boiler, connect it with a range boiler and have an abundant supply of hot water ready for use day or night.

Send us a rough sketch of your building on our plan blank if you have one. We will send plan blanks for Hot Water or Steam Heating Plants on request. Give the size of each room, the distance between the floors and ceilings of basement and first, second and other floors (if any), locate windows and outside doors on sketch and show dimensions of each. From this sketch we will figure the necessary size of radiators for each room and will send you an itemized estimate and complete specifications, quoting prices and describing each item you will require to install this modern money saving convenience in your home.

Send us your sketch at once. Don't wait. If you have a blue print of your building or a drawing from which the carpenter has worked, send it to us, as we will be able to figure the plant from that and it will then be unnecessary for you to make up another sketch. When we send you the estimate we will return your blue prints or architect's sketch by registered mail. We employ a force of heating engineers who have had years of experience in estimating and designing heating plants. We know that we can furnish you with a plant that will give better results at a lower price than any you could buy elsewhere. We make absolutely no charge for estimating the cost of your heating plant or for designing the system when we receive your order. You will only be charged the actual catalog price of each item necessary for the complete plant, and as these prices represent the factory cost with but one very small profit added, you can readily see that the total cost of the heating plant will be very low. Write us today.

SEARS ROEBUCK & CO.

Certificate No.

Certificate of Guaranty

This is to Certify that the Heating Plant sold by the undersigned to Name (P.O.) (State) is guaranteed to be absolutely perfect in every detail, all castings free from flaws and defects, and when properly installed according to instructions accompanying same, is guaranteed to heat the building for which it is furnished to a comfortable degree of warmth, during the coldest weather, as specified on the request for estimate. Should this plant fail in any way to give perfect satisfaction to the purchaser within ten years from date, in addition to the return of same at our expense for transportation charges both ways, and we agree to refund the purchase price.

Dated at Chicago this ____ day of ____ 19__

Sears Roebuck & Co. Chicago Ill.

This illustration is a copy of our two-year written guarantee on our heating plants, absolutely protecting you in every way.

Hot water and steam heating plants stand first among modern improvements home comforts. They are the ideal heating systems. We have saved you money your other supplies, let us save you money on a guaranteed heating plant. Se us a sketch of your home and we will quote you figures for a hot water or stea heating plant complete, guaranteed to comfortably heat it, at a surprisingly lo price. Direct connection with one of the largest manufacturers of heatin materials, and the application of our money saving system to this line merchandise enables us to make you a large saving. Our prices are bas on manufacturing cost with just one profit added, eliminating all unnece sary expenses and profits of middlemen.

A Hercules Heating System keeps every room in your home at summer temperature while the thermometer may register from 30 40 degrees below zero. You can regulate the heat in each room any temperature desired. **No more dressing in cold rooms;** yo have perfect control of the heat, such control as you cannot hav with any other heating system. Regulation of the Hercule system is simple, positive and when so desired can be ma automatic. We always figure sufficient reserve capacity make it unnecessary to force the fire, no matter how low th temperature may be. While the lowest temperature vari according to locality, even this is taken into consideratio when figuring your heating plant.

The first cost of a Hercules Heating Plant is, course, a little higher than that of stoves, but the co of fuel and maintenance is less than that of th required number of heating stoves to heat yo home throughout; this and the indirect saving home furnishings make it a much better pay investment than stoves. The Hercules syste may be installed in a building just bei built, or in an old house without damag or marring the building. The boiler placed in the basement and the piping the different radiators is laid out give the best possible results.

Remember that no matter whe you live, whether or not you ha running water, you can install Hercules system. Water can forced into it with a ha pump or you can fill it wi a bucket through the e pansion tank; or if a ste heating plant, you c pour the water into th boiler by removin one of the sma plugs at the t and using an ord nary funnel. Wh once filled, it not necessa to add m than 5 gallon during sea

COMFORT STEAM OR HOT WATER THREE-COLUMN RADIATORS.

Shipped from factory in Western Pennsylvania.

OUR RADIATORS are of the latest improved design, and the ornamentation cannot fail to be acceptable to any of our customers, as it is pleasing and harmonious. Comfort Radiators are constructed to hold a pint of water to a foot of radiating surface. The spaces between the sections are wide, thereby assuring a perfect air circulation and enabling the radiators to do more effective work in giving off heat.

THE CASTINGS are made of the finest grade of gray iron of uniform thickness, and are free from all flaws and pinholes. All Comfort Radiators are tested to 70 pounds pressure before leaving our factory. We can furnish radiators in any number of sections desired.

While we list below only three-column radiators, we can furnish one, two or three-column radiators, ranging in height from 20 to 45 inches; low six-column radiators from 13 to 26 inches; also dining room, wall and any kind of special radiator that you may desire.

For full information and prices see our Special Heating Catalog.

When ordering be sure to state whether you want radiators for steam or hot water, also how they are to be tapped, otherwise tapping will be as follows.

STEAM RADIATORS ARE TAPPED AS FOLLOWS UNLESS OTHERWISE SPECIFIED:

Up to 24 feet	1 -inch supply
24 feet to 50 feet	1¼-inch supply
50 feet to 100	1½-inch supply

ECONOMY GASOLINE ENGINES

Built in This, Our Own Factory at Sparta, Mich

We invite you to visit our mammoth gasoline engine factory at Sparta, Mich., 14 miles from Grand Rapids. If you live near this factory or are ever in the neighborhood, we would like to have you call and look over one of the largest and best equipped gasoline engine factories in the country.

Our factory superintendent will gladly show you how we build the high grade Economy Gasoline Engine; he will show you how we have been able to reduce the cost of making each part by the installation of high grade automatic machines, how we have improved the system of handling the work in the factory, how we test every engine before it goes out, to be sure that it is in perfect running order.

This factory has been pronounced by men who are in a position to know, to be one of the best equipped, most up to date and best organized gasoline engine factories in the country. They tell us that they were astounded to see us using the highest grade materials in our engines and the finest automatic machines in their manufacture.

If you could take a trip through our factory with the superintendent and see the methods we use to reduce the cost and still produce a high grade engine, if you could see for yourself the high grade material that we use in the Economy Engines and then go through some of the other factories where gasoline engines are made and compare their methods of manufacture with ours and consider their methods of selling gasoline engines, we know you would not be at all surprised that our prices are so much lower.

Our low prices do not mean any reduction in quality of material or workmanship, but are the result of the saving we make by manufacturing in an economical manner, in an up to date factory, by doing away with all unnecessary handling expense, by shipping the engines direct to the users, by being satisfied with one very small profit over and above the actual cost of manufacture.

The bottom has been knocked out of the high prices that formerly ruled the engine trade. There is absolutely no reason why you should pay from one-third to one-half more for a gasoline engine than the prices we ask. The Economy Engines are high grade in every respect. We guarantee them absolutely. We have all sizes in stock ready to ship, your size, just the engine you want. It is waiting at the factory ready to start to your farm the minute you say the word.

You Will Pay for a Gasoline Engine This Year

Whether you buy a gasoline engine this year or not, you will surely pay for one. Without a gasoline engine you waste far more time and money in a single year than the price we ask for an engine that will do your work. We don't believe we will have to waste any time arguing with the farmer over the question of buying a gasoline engine, for an up to date farmer knows that its value is as thoroughly established as the value of a self binder over the hand method.

The right engine for you to buy is the Economy Gasoline Engine. It is the one engine for you to buy, because it is built in a perfectly organized and modern factory by people who know how. We do not need to tell you that all parts are perfectly made on automatic machinery so as to be instantly interchangeable without fitting in case of repairs or replacements. We do not need to describe to you the different kinds of metals we use in the various parts. You can take our word for it that every part of an Economy Engine is just exactly as it should be, because we back it with our guarantee, the one guarantee that asks no questions, that makes no conditions, a guarantee that considers you, the purchaser, to be the sole judge of whether or not you are satisfied. This is the basis upon which we sell the Economy Gasoline Engines, and in making them we never lose sight of the fact that the finished product must be good enough to carry such a guarantee.

Our fair and square selling method enables you to try the Economy without risk. You send us your order; we send you the engine. You try it on your own farm in your own way, doing your own work for sixty days. If you are not entirely satisfied that the Economy Engine is the one you want, you send it back to us at our expense. If you do not like the Economy Engine, the trial does not cost you a penny, because we send you back the purchase price and the freight charges. That is the kind of a trial that proves something. It protects you absolutely from an unsatisfactory purchase.

GUARANTEE THE ECONOMY

Be Equal to Any Gasoline Engine You Can Buy, Regardless of Make or Price

Economy Is the Only Gasoline Engine Sold Today at a Fair and Price With a Reasonable Profit Over and Above the Cost to Build Grade Gasoline Engine in One of the Biggest and Most Up to Gasoline Engine Factories in the World.

Want You to Try One of These High Grade Economy Engines at Expense. If You Are Not Satisfied, We Pay All Expense. Compare the Economy With Any High Grade Gasoline Engine You Know of, Test Them Side by Side on the Same Work; if the Economy Does Not Pull as Much and Do It Easier and on Less Gasoline, You Can Send It Back and We Will Send You Back Your Money, Together With Any Freight Charges You Have Paid.

WHAT WE GUARANTEE

Our whole reputation is behind this guarantee. Our success entirely due to living up to it without argument. We see to the engine is made so it can carry this guarantee. It you complete protection.

We guarantee the Economy Gasoline Engine to be equal in construction, finish and power developed to any gasoline made, regardless of price; to do all that we claim, develop its full rated horse power, to do as much work at as cost for gasoline and oil as any other gasoline engine. guarantee to furnish repairs whenever needed on short at a reasonable cost and will replace absolutely free at any part of an Economy Gasoline Engine that gives account of defect in material or workmanship.

We Give You 60 Days to Prove Our Claims

This is no idle offer just to get your order, but a frank statement of the confidence we have in the Economy Gasoline Engine. We only ask that you give the Economy a chance to prove its worth to you. Send us your order with the money for the size you want and we will ship you the gasoline engine and give you sixty days to try it on your own farm before you decide to keep it. If you don't want it, we don't want you to keep it. You can compare it with any gasoline engine you know of as to power, durability, simplicity and finish. If you do not feel that the Economy is as good, if not better, than any other gasoline engine on the market regardless of price; if you are not perfectly satisfied in every way, you may return the engine and we will send you back every dollar you paid out, both price and freight charges.

Engine You Need for Your Work

Buying a gasoline engine you should be absolutely sure that the pick out will do your work. If you are not sure, write and tell what you want to do and we will tell you what engine will do work most economically.

1½-horse power engine is for very light work, cream separators, ing machines, pumping, etc.

2-horse power engine is for running several of these light at a time or taking care of other small farm machines.

4-horse power engine is for light farm machinery, running small feed grinders, fanning mills, etc.

6-horse power engine is really the best all around farm engine to you cannot make a mistake by buying this engine, as it will handle advantage the large sized farm machines, and it will also take the light work as well and do it economically.

8 and 10-horse power engines are for heavy work, ensilage cutshellers, etc.

Very careful in making your selection of a gasoline engine. Be sure plenty of power. If there is any doubt in your mind, write us placing your order.

We Can Always Furnish Repairs

All parts of the Economy Engine have been standardized. By this we mean every part is made like every other part of the same kind. All parts are made on modern automatic machines and they fit within a thousandth part of an inch, where that degree of accuracy is necessary. This not only means **that we can put the engines together accurately and guarantee** perfect results, but it means that you can secure repairs or extra parts as long as you need them. We keep a complete record of every engine shipped. We pay particular attention to repair orders, they are filled promptly, shipment being made the same day the order reaches us, and when the part arrives you can put it on yourself; all the tools you will need are furnished with the engine, the monkey wrench, pliers and screwdriver. You will not have to alter the part in any way, as all parts are absolutely interchangeable on the different engines that we build.

HOW TO ORDER A GASOLINE ENGINE

You have made up your mind to buy a gasoline engine, the first thing to do is to decide on what size of engine you need for your work. If you know, but are not sure, just send us the order and tell us what you want to do and we will tell you if you have made a mistake.

Simply send us a letter enclosing the price of the engine, give us the number and horse power of the engine and we will do the rest.

If you have several machines to run, tell us what they are; our experts are thoroughly familiar with all matters of this kind and you can trust absolutely to give you just what you want. We will ship the engine immediately, as we have them in stock; and remember, you have sixty to try the engine on your work before you decide to keep it.

RED HOT SPARK

THIS WONDERFUL BATTERY IS FURNISHED WITH ALL ECONOMY GASOLINE ENGINES

A STRONGER AND BETTER SPARK AT LESS EXPENSE

STAND-BY MULTIPLE BATTERY gives a red hot spark, a spark that is much stronger than you can possibly get from the regular equipment of dry cells furnished on gasoline engines. The Stand-By Multiple Battery will last much longer than the regular dry cell. This wonderful battery is now furnished as regular equipment on all Economy Engines. Every engine we build ship out will be furnished with this Stand-By Multiple Battery, with the exception of the Little Wonder we sell for $29.95.

STAND-BY MULTIPLE BATTERY IS FURNISHED WITHOUT EXTRA CHARGE ON ECONOMY GASOLINE ENGINES

While this Stand-By Multiple Battery costs twice as much as the dry cell equipment usually furnished by gasoline engine manufacturers, it is so much superior to anything ever furnished for the system of a gasoline engine, outside of the magneto, that we decided to add this extra expense in order to make our engines satisfactory, in order that there will be absolutely no trouble from ignition system. It is only one illustration showing to what extent go to add every possible improvement to the Economy Gasoline keeping them in the lead of all other engines in every possible

You cannot secure a Stand-By Multiple Battery with the engine you to buy, insist upon a magneto; do not accept an engine of any unless you know you are going to get the hottest possible spark.

You can only get this with a magneto or a Stand-By Multiple Battery, and the Stand-By Multiple Battery is furnished only on Economy Engines. We don't wish to state that the Stand-By Multiple Battery is superior to a magneto; it is not, but next to the magneto it is the greatest thing ever added to the gasoline engine, as it overcomes most of the aggravating troubles that people have had in the past with gasoline engines, which have been with the ignition system, and as the Stand-By Multiple Battery and the magneto now make it possible to have an absolutely sure hot spark, there should be no further trouble in starting an engine and keeping it running. Don't order any kind of an engine without the Stand-By Multiple Battery or a magneto, and if you will order an Economy Engine we will furnish the Stand-By Multiple Battery as regular equipment without extra charge.

OUR MECHANICAL ENGINEER'S OFFICE

IT IS easier to order a gasoline engine from us than from an agent or dealer, as in selling thousands of gasoline engines a year our mechanical engineers and field experts have a greater opportunity to gain the experience necessary to tell you just what engine will do your work to the best advantage and at the least expense. Don't be afraid of making a mistake. Send us your order, telling us what you expect to do with the engine, and if what you order is not suitable for your work we will write you.

If you do not know how much power or the kind of an engine you need, and will address a letter to **DEPT. 11, MECHANICAL ENGINEERS, SEARS, ROEBUCK AND CO., CHICAGO, ILL.,** and tell us just what you want to do with the engine, what kind of machines you want to run, how much water you want to pump or anything else you have in mind, our mechanical engineers and practical experts will tell you just what engine will do your work to the best advantage and at the least expense. All information absolutely free.

OUTFIT FIGURED OUT FOR ONE OF OUR CUSTOMERS

Digitized by Google

Hand Portable Gasoline Engines

$52.95

A hand portable gasoline engine can be used in the barn to grind feed, cut fodder, shell corn, etc.; you can take it to the house to run the cream separator, washing machine, churn, or when the windmill is not running it will pump water. It will save you considerable time, money and labor. Outfits consist of our regular Economy Gasoline Engines (see page 1186), fitted with Stand-By Multiple Battery, mounted on solid wood channels 5 feet long, 2½ inches wide, 3¾ inches thick; metal axles, steel wheels, 14 inches front, 16 inches rear, 2-inch tires, 4-inch track. Each truck is fitted with substantial hand tongue, and we guarantee the outfit to be equal to any portable outfit that you can buy.

Shipped from our factory in Southern Michigan.

No. 11H4535 2-Horse Power Engine on Hand Truck. Price..... **$52.95**

No. 11H4536 4-Horse Power Engine on Hand Truck. Price..... **85.95**

Horse Portable Gasoline Engines

$134.45

Portable gasoline engines for grinding, sawing wood, running the thresher, ensilage cutter, bean hullers, hay balers, for filling silos, etc. Consist of Economy Gasoline Engine, fitted with Stand-By Multiple Battery (description of 6-horse power engine on page 1186, 8 and 10-horse power on page 1190), mounted on solid wood channels with wood axles, steel wheels 24 inches front, 30 inches rear. The 6-horse power truck has a 3x9-inch skein, 3-inch tires; 8-horse power truck a 3¼x10-inch skein, 4-inch tires; 10-horse power truck a 3½x10-inch skein, 4-inch tires; width of track, 4 feet 8 inches on all sizes. Shipped on sixty days' trial. Guaranteed for life. For general farm work we recommend the 6-horse power outfit. Can be used for stationary work.

Portable Engine, Saw Frame and Belt

A **gasoline engine** has no equal for sawing wood. It will very soon pay for itself in sawing wood alone. You can also use the engine for stationary work. Outfit consists of Economy Engine on truck, with David Bradley saw frame and a 40-foot rubber belt. Trucks fitted with shafts for one horse or, if you prefer, we can furnish pole. Saw frame and belt can be loaded on the truck. These outfits are very easily set up and will saw as much wood and give as good results as the higher priced outfits on the market. Engine, truck and saw frame shipped from separate factories to save you extra freight and handling expense. Each engine fitted with Stand-By Multiple Battery.

No. 11H4516 4-Horse Power Engine on 1-Horse Truck, with 24-inch saw frame, 40 feet of 4-inch 4-ply rubber belting. Price..... **$129.75**

No. 11H4517 6-Horse Power Engine on 1-Horse Truck, with 28-inch saw frame, 40 feet of 6-inch 4-ply rubber belting. Price..... **164.45**

Combination Wood Sawing Outfit

Remove the Saw Frame and You have a Portable Engine.

Complete wood sawing outfit, all mounted on one truck engine, truck with sliding saw table, balance wheel, saw and belt. For description of trucks see above. When not in use for sawing wood, sliding table can be removed and you have a portable engine or engine may be removed from truck for stationary work. Guaranteed equal to any wood sawing outfit on the market. Shipped on sixty days' trial. Engines are described on pages 1186 and 1190, and are fitted with Stand-By Multiple Battery. Engines shipped from factory in Southern Michigan; truck and saw outfit from factory in Illinois. You can put the outfit together without any trouble and by shipping from two different factories we are able to save you considerable in extra freight and handling expense.

Line Shafting, Pulleys, Hangers, Etc.

Shipped With Gasoline Engine From Our Factory in Southern Michigan.

Attachment For Barrel Churn.

To run a churn with a gasoline engine you must have a tight and loose pulley. The accompanying illustration represents pulley which can be attached to any barrel churn. With this pulley the engine need not be stopped to stop the churn; just run the belt over on the loose pulley.

No. 11H4605 Double Pulley, 12-inch diameter, 2-inch face. Weight, about 15 pounds. Price.....**$1.95**

Cold Rolled Steel Shafting.

We furnish one size of shafting only from our factory, 1¼ inches in diameter, and as the usual lengths are 8 and 12 feet, we show prices on these lengths only. For other sizes of shafting, see page 1060. All shafting guaranteed.

PRICES.

No. 11H4607 12-Foot 1¼-Inch Shaft. Price.....**1.80**

Safety Set Collar.

This is a collar for slipping on the shaft next to the hanger to prevent the shaft from working back and forth. It is made of cast iron with set screw for holding in place.

No. 11H4608 Safety Set Collar for 1¼ inch shaft only. Price.....**16c**

Run Your Machinery From a Line Shaft

It is more economical to run several machines at the **same time than to run each one separate.** By putting in a line shaft and connecting all your machinery you can run them all at the same time with one gasoline engine, which will mean not only economy in time, but a great saving in gasoline and oil.

If you are interested in an outfit of this kind, write and tell us just what machines you want to run. We will tell you just what you need and send you prices on the complete outfit, with a drawing showing just how to put it up.

The colored picture on page 1188 is a sample of an outfit we figured out for one of our customers, which has been a great saving to him. Our experts will figure out an outfit for you if you will write and tell us just what you want to do. Address your letter to

DEPT. 11, MECHANICAL ENGINEERS,
SEARS, ROEBUCK AND CO., CHICAGO, ILL.

Cast Iron Pulleys.

A cast iron pulley is perfectly satisfactory for the ordinary line shaft run with a 2 or 4-horse power engine, and it is a great deal cheaper than any other pulley you can buy. We guarantee these pulleys to give you satisfactory service and will replace any that prove defective. They are bored for 1¼-inch shaft only. Held in place with set screw.

29.95 THE LITTLE WONDER GASOLINE ENGINE $29.95

An Engine to Turn the Crank for You. Saves Time, Money and Muscle.

Will Run the Separator, Churn, Washing Machine, Fanning Mill, Feed Cutter, Grindstone, Pump Water and a Dozen Other Different Things. An Engine for the Home, Shop, Factory or on the Farm.

The Greatest Value Ever Offered.

In the Little Wonder Gasoline Engine we are giving you the greatest value ever offered, more horse power for less money than has ever before been offered by anyone. This exceptionally low price is made possible by our manufacturing these engines in large quantities, by selling a large number of them, shipping direct from factory to user and adding but our one small profit to the actual manufacturing cost. No handling expense, no profit to the agent or dealer; a high grade engine delivered to you at one-half the price charged by other firms. We defy any manufacturer to produce as good an engine for even twice our price.

Specifications.

BORE—3¾ inches.
STROKE—5½ inches.
PULLEY—8x4 inches.
SPEED—450 revolutions per minute.
FLOOR SPACE—24x40 inches.
SHIPPING WEIGHT—About 480 pounds.
Shipped from factory in Southern Michigan.

A High Grade Engine Guaranteed for Life.

The Little Wonder is a high grade engine, complete with full equipment, all ready to run. It is built exactly like our larger engines; all you have to furnish when you receive it is the gasoline; it is made in our own gasoline engine factory from the same material, on the same high grade machines and by the same skilled mechanics as our higher priced engines. It is thoroughly tested and inspected and we guarantee it to give you as good results as any engine of equal horse power that you can buy, regardless of make or price.

Simple, Durable, Economical, Powerful and Easy to Start

This engine was designed after our regular Economy Engines to supply the demand for a small gasoline engine. If 1½-horse power is all you need for your work, we will be glad to ship you one of these engines and give you sixty days to try it to prove to yourself that it is as good a gasoline engine as you could buy, regardless of price.

Don't make a mistake in buying a gasoline engine and get too little power, as you will find after you have the engine that it will do a great many things you never thought of before. By buying the proper size in the first place you save considerable money in the long run.

If you are not absolutely sure that this engine will do your work, write and tell us what you want to do, what machines you have to run, and we will tell you which engine will do your work most economically.

No. 11H4509 1½-Horse Power Stationary Engine fitted with six dry cells. Weight, 480 pounds. Price..... **$29.95**

No. 11H256B Stand-By Multiple Battery in place of the dry cells, add..... **$3.00**

A Gasoline Engine and Governor Pulley to Run Your Cream Separator.

A cream separator run by a gasoline engine will give you more cream than the hand driven machine, as the engine when used with our governor pulley runs the separator at a more even speed than it is possible to get by hand.

It is impossible to run the separator direct from the engine on account of the vibration, which would wear out your separator.

Our Governor Pulley entirely overcomes this. It runs the separator at just the right speed to give the best results and saves wear and tear on the separator.

Governor Pulley shipped on 60 days' trial, guaranteed for life against defect. Can be used with any gasoline engine or any separator. Full instructions sent with each pulley.

No. 11H4501 Economy Governor Pulley with stand. Weight, 30 pounds. Price..... **$6.75**

No. 11H4502 Economy Governor Pulley without stand, for use on line shaft. Weight, 20 pounds. Price..... **5.75**

No. 11H4503 14-Inch Separator Clutch Pulley, for Economy Chief Separators only. Weight, 20 pounds. Price..... **2.25**

A Gasoline Engine to Run the Washing Machine.

This picture shows the Little Wonder Gasoline Engine connected by belt to our Wizard Power Washing Machine. The engine is as described above; the washing machine you will find described on page 1017. Outfit is complete, all ready to run, including the belt. The engine is shipped from our factory in Southern Michigan; the washing machine is shipped from Chicago.

An outfit of this kind will pay for itself in the time saved in washing clothes, besides it will lighten the household work, and the engine can be used for running any other light machines you may have, such as cream separator, churn, grindstone, small grinders for table meal, etc. We will ship this outfit on sixty days' trial and guarantee to replace at any time any parts that give out due to defect in material or workmanship.

PRICES.

No. 11H4504 Complete Outfit, Engine, Washing Machine and belt. Weight, 605 pounds. Price..... **$40.65**

No. 11H7537 Wizard Power Washer only. (See page 1017.) Price..... **9.70**

Friction Clutch Pulleys.

Used in place of the regular pulley on a gasoline engine, so that you do not have to throw the belt on and off. You can start the engine independent of the machinery; after the engine is running, by simply pushing in on the hand wheel, which is stationary, you start the machinery, which saves wear and tear on the engine as well as the machinery and makes it much easier to start your engine.

NOTE—When clutch pulley is ordered with engine, the regular pulley is omitted. We furnish clutch pulleys for Economy Engines only.

PRICES FOR FRICTION CLUTCH PULLEYS.

The Remy Magneto.

A magneto is a small electrical generator to be used with a gasoline engine to furnish the spark. You use batteries to start the engine; after it is running you change to the magneto, which saves the battery and reduces your ignition expense.

The Remy Magneto is well known all over the country. It is acknowledged as being equal to the best magnetos made. We recommend its use with our gasoline engines, as it will give better results than if you use the batteries only. Shipped on sixty days' trial; fully guaranteed.

SOLID COMFORT VEHICLES

WHERE OUR VEHICLES ARE BUILT.

—

LARGEST IN THE WORLD.

61,0 VEHICL BUIL IN TH FACT IN 19

Big Price Reductions For 1912

Our prices on vehicles have been reduced through the entire line for 1912, as you will see in the following pages, except where we have made some change in the style of the vehicle, putting on a more expensive seat, etc., in which case the increased price simply covers the additional cost to manufacture.

We have offered some wonderful vehicle bargains during the 15 years we have been selling vehicles, but never before have we been able to offer our customers such sensational prices, such big values in high grade vehicles, as we are offering in the following pages.

How can we do it? This question will be asked many times: How can Sears, Roebuck and Co. afford to sell these vehicles at such low prices? The answer is simple. Look at the picture above where our vehicles are built. There were 61,000 vehicles built in this factory at Evansville, Indiana, last year. Everyone knows that the more vehicles you are able to build the lower will be the manufacturing cost of each one. Most factories built fewer vehicles in 1911 than they did in 1910 and their manufacturing cost increased accordingly, b this Evansville factory built 61,000 vehicles in 1911 as against 50,0 in 1910, an increase of 11,000. This year 75,000 will be built. T manufacturing cost of our vehicles has been reduced by increasing t output, while other factories have increased their cost because of th reduced output. The prices paid for our raw materials and fixtur are lower, while other manufacturers are compelled to pay more t theirs. Consequently, the manufacturing cost of our vehicles is less th ever, while other factories are building them at an increased co This, then, is the reason why we are reducing our prices to o customers while other factories are either advancing their prices are leaving them the same and putting cheaper materials into th vehicles. We could leave our prices the same and make more pro but it is our policy to always give our customers the benefit of o savings which we are able to make, because of larger sales and m scientific manufacturing, and you, therefore, see the results in t sensational reduced prices which we are quoting in this catalo

SATISFACTION GUARANTEED — WARRANTED AGAINST DEFECTS FOR LIFE OF VEHICLE

READ THIS GUARANTEE

Satisfaction is what we guarantee. The thirty days' trial we offer, and which is offered by practically all concerns selling vehicles by mail, is a fair test for the vehicle, but this trial answers only the purpose of giving you an opportunity to inspect the style and finish and easy riding qualities of the vehicle. It does not afford you the opportunity of finding out for yourself of what materials it is made, how long it will last and what service it will give you. It is possible for a vehicle to give entire satisfaction for thirty days and be unsatisfactory afterward, and for this reason we guarantee to give you satisfaction always.

If we do not give you a good vehicle we know you will not be satisfied, and such being the case you will probably buy any other merchandise you need from some other concern. Primarily we want you to be satisfied; we want to retain you as a regular customer, and it is our intention that every vehicle we ship out shall give such service and be of such value that you will remain a satisfied customer.

We intend to accomplish this end by guaranteeing to keep you satisfied with your vehicle. We do not limit our responsibility to thirty days, or to one, two or three years. We know that our vehicles are being made in the largest and best equipped vehicle factory in the world; we know that the materials and workmanship are carefully inspected and we believe no better vehicles are being built today than those being turned out of the factory at Evansville, Indiana. They are honest vehicles, built according to the most improved methods, and we believe in them. If you have one of our vehicles and something goes wrong, it will not be because we did not use every effort to make it right at the factory. In buying one of our vehicles you are contracting to get good merchandise, just as we describe it, and if at any time something does give out, then it is not your fault, but our fault and the fault of the factory. We honestly believe that, allowing for natural wear and tear, our vehicles will last as long and give just as good satisfaction as any vehicle made, regardless of price, and we will obligate ourselves to replace free of expense any part which gives out because of defect in material or workmanship, and to make good at any time during the natural lifetime of the vehicle anything not absolutely right.

If you buy a vehicle from us and decide within thirty days that you do not want to keep it you will have no trouble in returning it to us. We will make it easy for you and will give you back all your money and any freight charges you paid. If you have a complaint to offer at any time during the natural lifetime of the vehicle we will use our best effort to make a most liberal, honest and fair adjustment for you.

We want you to be satisfied and if you buy a vehicle from us we are going to use every effort within our power to see that you are satisfied. We do not believe that there is any other concern in the country that is willing to offer you a proposition of this kind.

Our method of selling direct to the consumer from the factory enables the purchaser of one of our vehicles to save all dealers' and jobbers' commissions, and our big vehicle factory enables us to practice all economies in turning out vehicles and to produce them at the lowest possible cost. We honestly believe we are selling vehicles $15.00 to $20.00 cheaper than the same grade of vehicles can be bought anywhere else, either from a dealer or from other concerns selling vehicles by mail. We have investigated the situation thoroughly and this is our conclusion.

We guarantee a saving of from $15.00 to $20.00 on any vehicle we list and we agree to keep you satisfied during the natural lifetime of the vehicle. Give us a trial and we will use our very best efforts to make you a satisfied customer.

This Guarantee Applies on All Vehicles We Sell, Including Business Wagons and Farm Wagons.

NOTICE—We Wish to Call Your Especial Attention to the Wonderfully Popular Metal Seat Buggy on Pages 1203 to 1206.

FEATURES THAT COUNT

CENTER BEARING BODY LOOP.

We have used this style body loop on our vehicles for a great number of years with the greatest success. We wish you to note carefully the particular points we illustrate in this picture. By our construction the spring can be attached in the center, giving a perfect down pull from the center, which is much stronger than the old style weak construction shown in the picture below. Our construction gives a much easier action than the old style adjustment, is stronger and effects the perfect down pull all springs should have. There is no side pull, no twist nor strain in any weak

You obtain the correct action the efficiency of the spring is in- at least 50 per cent. This is the reasons why our Solid Com- hicles are considered the easiest and lightest running vehicles

BRADLEY SHAFT COUPLERS.

Without a doubt the Bradley Shaft Couplers are the best shaft couplers made. You will find them on all high grade work. We furnish them on nearly all our vehicles without extra charge. Where they are not specified, we can furnish Bradley couplers in place of anti-rattlers for 60 cents extra.

S. SHULER'S PATENT ROLLER BEARING SPRING.

can furnish this roller bearing spring in place regular end springs for 60 cents extra ordered, with any of our buggies or run- This spring is easy riding and guaranteed as long as the buggy. Everybody knows Shuler Roller Bearing Spring is. If wanted to specify when you order that you want Patent Spring."

OUR LARGE FULL BEARING FIFTH WHEEL.

This illustration shows the fifth wheel we furnish with our Solid Comfort Vehicles. It is absolutely the strongest, most substantial and most graceful fifth wheel ever put on a buggy. It is noiseless and practically unbreakable. The king bolt is in the rear of the axle, which is a most desirable feature and which is found only on the highest grade vehicles made.

OUR ACME STORM SHIELD.

IPPED FROM CHICAGO OR FACTORY.

storm shield is the best of its kind on the and cannot be duplicated anywhere at our It is extremely popular with our trade and every customer who orders a buggy pur- one of these storm shields to be used with will fit perfectly, is neat, and gives abso- rotection from cold biting winds as well as and blizzards. It can be easily attached or ed without the use of tools. It is fitted arge celluloid window, permitting an unob- d view of the road. It is made of good rubber and can be attached or detached in an a minute and folded so that it can be under the seat. We can furnish this shield on any of our top buggies for $1.95 If you do not order a buggy at the same be sure to state width of dash and distance n bow sockets. **When you order be sure this catalog number.**

11H21 Acme Storm Shield. Price.$1.95

DIAMOND GUARANTEED RUBBER TIRES.

We are furnishing this year the Famous Diamond Solid Rubber Tires. The Diamond tire is recognized as being one of the best automobile tires, both in the solid and pneumatic styles. We consider it to be one of the very best rubber tires made, and place on it our strongest guarantee. We recommend solid rubber tires as they will give better service than the cushion rubber.

DIAMOND GUARANTEED RUBBER TIRES.

¾-inch solid rubber tires in place of steel tires. Price..$10.80
⅞-inch solid rubber tires in place of steel tires. Price.. 12.10
1-inch solid rubber tires in place of steel tires. Price.. 15.20

GUARANTEED CUSHION RUBBER TIRES.

1-inch cushion rubber tires in place of steel tires. Price.$15.20
1⅛-inch cushion rubber tires in place of steel tires. Price. 18.90

UNGUARANTEED SOLID RUBBER TIRES.

Some few of our customers desire to use a cheap tire, and for this reason we furnish an unguaranteed rubber tire at the prices quoted below. Our Diamond Guaranteed Rubber Tires will outwear three sets of unguaranteed tires.

⅞-inch unguaranteed tires.....$ 9.15
1-inch unguaranteed tires..... 12.70

BEST POLE MADE.

We are particularly anxious that you should note the ironing of this pole. It is the best ironed pole made. You positively cannot obtain a pole as neat in appearance and as well ironed anywhere, regardless of the price you pay. We charge you no more for this high grade pole than other firms charge for a cheap grade. It is made of carefully selected material. The whiffletrees and neckyoke are made of the highest grade material. We furnish this pole complete with whiffletrees, neckyoke, stay straps, etc., exactly as shown in illustration, at an extra cost of $4.65. If desired in place of shafts the extra charge is $2.00. Not sold separately; furnished only when ordered with our buggies.

20TH CENTURY TRIPLE BRACED SHAFTS.

We are using the 20th Century Triple Brace Shafts this year, which are considered to be the best braced shafts on the market. They are made of the very best material, nothing but the selected hickory being used. They are ironed, as you will see by the illustration, with the 20th Century Patent Shaft Irons which make the connection between the crossbar and shaft arms as solid as though they were one piece. The heel brace, as shown in illustration, with a center brace in the middle of bend, takes all of the strain from the bend of shafts, which is naturally the weak point. We do not see how these shafts could be improved, and as we paint and trim our shafts in the best possible manner, we know we are furnishing shafts that will prove satisfactory.

STAPLE & HANFORD OPEN COIL SPRING CUSHION.

This illustration shows the box spring cushion used on our vehicles where described, which consists of a hardwood frame fitted with Staple & Hanford Resilient Coil Springs so arranged that they cannot become displaced, allowing the cushion to sink in any part. Our spring cushions are built to last and are fitted with more springs than the majority of cushions built.

SCREWED RIM WHEELS.

This illustration shows you the advantage of screwed rim wheels such as are furnished on all our vehicles, as you will note in the descriptions under the vehicles. There is a screw on each side of the spoke which prevents the rim from splitting, which is a most desirable feature; screwed rim wheels will easily outlast any other kind.

CHANGES THAT CAN BE MADE.

The changes as shown below are in addition to those shown under each illustration and can be made on any buggy or runabout when shipped from factory. We can make no changes on buggies when shipped from warehouse. We can, however, furnish the same style buggy as we ship from warehouse from our factory with any changes shown below. When shipment is made from factory, you pay the freight charges from Evansville, Ind.

AXLES—Arched or drop; your choice (on cut under vehicles only arch and bike axles can be furnished).....No extra charge

Twin Automobile Seat Runabout

This is a new 1912 design twin automobile at. Our handsome sunken panel metal seat was popular during last season that we have dupli-ed the design in a wood seat, which we are nishing on this runabout. While in appear-ce it is equal to the metal seat runabout shown ow, no wood seat made can give the service d last as long as a metal seat, and we therefore ommend No. 11H523 runabout shown below. , however, guarantee this wood seat runabout be a first class vehicle, one of the handsomest les made, and equal in finish, workmanship and erials used to any wood twin auto seat run-out on the market. It is sold under our satis-tion guarantee, which means it must please n and give you satisfactory service always.

WE SHOW A FULL LINE OF PONY RUNABOUTS, CARTS AND TRAPS IN OUR SPECIAL VEHICLE CATALOG, WHICH WE WILL BE GLAD TO SEND YOU FREE.

Twin Automobile Metal Seat Runabout

This is the world's most popular runabout. e sold more of this one style runabout last ar than was ever sold of any other one style nabout by any other concern. For 1912 we ve changed the design of the dash and the es of the seat, making it a little more aceful and handsome. We are using now a avier gauge metal, the same weight as is ing used by the automobile manufacturers, d we guarantee this seat to stand up for the e of the vehicle. It cannot open at the rners, and we are able to get a nicer and essier finish than on the ordinary wood seat. his is the runabout that we recommend, as it strictly high grade throughout and one hich we would be glad to have you compare th any other runabout on the market, re-rdless of price. It cannot be duplicated ewhere for less than $65.00.

TWIN AUTO SEAT BUGGY

Heretofore twin auto seat buggies have been furnished only in the best grades and at prices ranging from $60.00 up. We have found that there is considerable demand for a cheaper buggy with this popular style seat, and we are therefore furnishing this season one of our medium grade buggies with a new design twin auto seat, at the heretofore unheard of price of $44.95. The twin auto seat which we use on this buggy is made of wood and is of a very handsome design; equal to any on the market, with the exception of our new 1912 sunken panel styles furnished on our higher priced buggies. While we strongly recommend that you buy one of the higher grade buggies listed in this catalog with twin auto seats, and especially recommend the Metal Seat Buggy No. 11H720, which is illustrated and described on pages 1203 to 1206, which we can ship immediately from any one of thirteen different cities throughout the United States, at the same time if you do not feel that you want to put as much as $59.90 in a buggy and you want to get a twin auto seat buggy which is strictly up to date, we can highly recommend the buggy shown on this page as being a first class job which will compare very favorably with buggies selling at $60.00 to $70.00. We will be glad to ship this buggy to you on thirty days' trial, with the understanding that you can return it and get your money and freight charges back if you do not find it satisfactory in every way.

1912 Model Twin Auto Seat Buggy

Sunken Panels

This is one of our most popular twin auto seat buggies, of ch we have sold thousands. For 1912 we are equipping it a new design sunken panel wood twin auto seat, which consider one of the handsomest twin auto seats ever gned. In appearance it is an exact duplicate of our Metal n Auto Seat furnished on No. 11H720, illustrated and ribed on pages 1203 to 1206. We strongly recommend that select the metal seat buggy, as there is no doubt but that metal seat is in every way superior to the wood seat, but ou wish a wood seat twin auto buggy, you can make no ake in selecting this one, as we guarantee it to be equal ny wood twin automobile seat buggy on the market, and if you purchase it you will save anywhere from $15.00 to 00.

1912 METAL SEAT MODEL

'win Automobile Seat Buggy

The World's Most Popular Buggy

OVER 30,000 IN USE

Shipped From
ANSAS CITY, MO.,
and OMAHA, NEB.

Freight Charges Are Very Small

IMMEDIATE SHIPMENT.

We can ship one of these buggies the day after we receive your order, from either one of the cities named, and it will reach you within a very few days. The freight charges will hardly amount to anything when compared with the saving you make.

61.75—Price Reduced—$59.90

ur new 1912 model of the Metal Twin Automobile Seat y is better and a bigger value than ever. This buggy is ost remarkable vehicle ever marketed by any concern. are more of this one style top buggy in use throughout nited States than any other buggy ever sold by any con- Since featuring this Twin Auto Seat Buggy as our leader years ago we have sold over 30,000 of them. Each year e copied the latest Eastern styles and have improved uggy wherever it was possible to do so. We wrote letters r customers asking for suggestions as to where the buggy be improved and received much valuable advice from This buggy is the result of three years of conscientious to turn out a buggy equal to the very best, equal to the st priced vehicles on the market, one having all the latest res and right up to date in every respect.

Why We Are Able to Reduce the Price.

'e sold nearly 12,000 of this one style buggy in the season 11, and are basing our prices this year on turning out 16,000. factory has gone out and bought raw materials and fixtures is number. Just think of it, buying 16,000 sets of axles all e kind, 16,000 sets of bow sockets all of one kind, 16,000 f springs all of one kind, 16,000 sets of tires all of one and so on. This was no doubt the biggest order ever for parts of just one style top buggy, and consequently were able to secure very marked reductions in price over they paid last year. They combined this order with their for 50,000 parts for the other vehicles which they build, thus g an order twice as large as that given by any other con- This is one of the reasons why we are able to make the rkably low price on this high grade top buggy. The reason is that by building so many of these buggies all of and, the factory is able to very materially reduce the manu- ing cost of labor. By close figuring we think that we will le to save nearly $2.00 in the manufacture of this buggy he season of 1912, and as it is always our policy to give stomers the benefit of any saving we can make, we are this offering this buggy, the world's most popular style, at instead of $61.75, the price obtained for it during the of 1911.

Buy a Metal Seat Buggy.

e metal seat used on this buggy is without question the durable seat ever built for a buggy. Out of 12,000 seats we used last year we had less than one dozen rejected. what this means, that out of 12,000 seats less than twelve ers who received buggies equipped with these seats find anything whatever wrong with them. Out of 12,000 ordinary wood seats any manufacturer would feel extremely lucky if he didn't have trouble with 100 seats, and by this we do not want to infer that wood seats do not give satisfactory service. Most of them do, but it is impossible to build a wood seat so that if it is subjected to the weather and at all abused, it will not come apart at the corners or loosen at the sills. It is impossible for such a thing to happen with the metal seat, as it is one solid piece of metal over a wood frame. Be sure to refer to the picture on page 1206, where we show just how this seat is made.

Look at the Colored Picture on Page 1205.

On page 1205 we reproduce a photograph of this buggy in colors, showing you just exactly how it looks when furnished with red gear. On page 1204 we give full specifications showing you just exactly how the vehicle is made and just how it is equipped as carried in stock in Kansas City, Mo., and Omaha, Neb. You will note that we can furnish either black or red gear and either steel or solid rubber tires. If you want other changes made in the specifications, we can furnish them for you by shipping direct from the factory at Evansville, Ind., in which case you would pay the freight from that point.

Make the Comparison.

We would very much like to have you order one of these buggies and then compare it with similar buggies sold by your dealer. Compare our 37-inch French head springs with those on his buggies, compare the patent leather shaft point leathers, the Bradley couplers, the body loops, the dash, the quality of the upholstering, the quality of material used in the top, the painting and finish and the general appearance of the buggy, take a ride in this buggy of ours and then take a ride in your dealer's buggy. After you have made all the comparison that you possibly can make, if you do not think that we have sold you a better buggy than you can buy from your dealer at any price, if you do not think you have saved $20.00 to $30.00, if you are in any way dissatisfied with your purchase, we want you to send the buggy back to us, and we will send you back whatever you have paid for the buggy, also whatever you paid for freight. There will be no argument about it. You will be the sole judge. We satisfied 12,000 customers with this buggy last year and we have no doubt of our ability to satisfy you as well. Surely we would not make this open offer and ask you to compare it with any buggy sold by your dealer and give you the privilege of returning the buggy to us at our expense if not satisfied, if we did not know that we are furnishing a much better buggy at a big saving in price.

General Description of Our 1912 Metal Auto Seat Buggy

Be Sure to Refer to the Detailed Specifications on Our Buggy in the Warehouse in the City Nearest Y

SEAT—Metal automobile seat, made of the same gauge metal and in the same manner as the high grade automobile seats used on high grade automobiles. Back and sides have sunken panels, as shown in the small illustration on opposite page. The metal seat takes a much finer finish than the wood seat and is superior to it in every respect. The handsomest and most durable seat ever used by any manufacturer on a top buggy. Corners are clinched, clamped and brazed, making it impossible for them to open. We guarantee this seat to give absolute service and satisfaction in every respect or we will replace it without any charge whatever. This seat is especially comfortable, measuring full 32½ inches across top of cushion by 17 inches deep. You never saw an automobile with a narrow seat. An automobile is made for comfort. Why not so with a buggy? We are giving you a wide comfortable seat on this buggy.

UPHOLSTERING—High grade extra quality genuine leather; open box spring cushion; back padded and tufted over coil springs, making it very easy and comfortable; seat ends padded and lined; brass buttons.

BODY—Highest grade buggy body; guaranteed equal to the best bodies furnished on the highest priced top buggies; panels made of selected poplar and are convex, giving the swell effect so much admired in high grade top buggies. We build these bodies ourselves and know exactly what material is used; we guarantee them to give absolute satisfaction and will replace any one which gives out because of defective material or workmanship. The sills are made of hardwood stock with watershed bead; corner posts, bottom boards and seat house are of hardwood, glued and screwed; body panels are glued, screwed and plugged to frame; seat risers are concave; three-prong steps.

TOP—Auto style skeleton top, same design as is being used on all high grade automobiles. Entire top is covered with Chase automobile leather, which is a special fabric similar to genuine leather, extensively used in automobile tops; absolutely waterproof; bows are covered and top reinforced by straps on inside, as shown in small illustration. Top is extra long; has extra deep quarters, copied from the highest priced Eastern top buggies; extension joints; our own design shifting rail, which permits top being taken off in less than a minute's time; three or four-bow, with black enameled bow sockets, according to the warehouse from which shipment is made; special auto style back stays; brass rim oval back curtain light; four roll up straps; brass curtain fasteners; reinforced waterproof side curtains with large celluloid side lights.

GEAR—15-16-inch long distance true arched axles with wide bearing, fitted with full length hickory axle caps, sanded, co and clipped to axles with diamond clips; full wrought 12-in wheel, the best possible to buy; 37-inch French head French oil tempered elliptic end springs, easiest riding and best springs possible to buy, three-plate front and four-plate rear springs are the same as those used on the highest priced top b note that other buggies are furnished with 35-inch and springs); springs are clipped to our celebrated center bearing loops, front and rear, guaranteed never to break; double hickory reaches, ironed full length; heavy wrought iron strongest and most substantial gear possible to manufacture.

WHEELS—Selected second growth hickory. Guaranteed to be wheels used on the best grade buggies. We will replace with pense to you any wheel which gives out or does not give service. ⅞-inch screwed rims fitted with 1x¼-inch oval edge tires bolted to rims between spokes; boxes are set true to hydraulic pressure; all wheels guaranteed to track and run inches front and 43 inches rear.

SHAFTS—Highest grade selected second growth hickory; shafts with round straps; patches on shafts and crossbar; 36-inch leather points (note that other buggies are furnished with 30-inch patent leather points); the 36-inch points extend back holdback strap and protect the paint, and give the shafts a appearance.

PAINTING—Body, black; gear, carmine red or black, striped. Be to state which you want. These buggies are painted in the possible manner and the paint is guaranteed in every respect finish is equal to that on the highest class top buggies.

TRACK—4 feet 8 inches narrow.

SUNDRIES—Braced padded patent leather wing dash with brass rail; boot; full length automobile rubber mat; extra large proof storm apron; Bradley quick shifting shaft couplers.

Net weight, about 360 pounds. Shipping weight, crated under 34 about 520 pounds.

1912 Model Twin Automobile Seat Buggy

Metal Automobile Seat

$59.90

The World's Most Popular Buggy
Over 30,000 in Use

THIS BUGGY SHIPPED IMMEDIATELY FROM

Kansas City, Mo.
—OR—
Omaha, Neb.

SEE THE TWO PRECEDING PAGES FOR DESCRIPTION AND PRICES.

This is a Two-In-One Buggy. By means of our own special pattern shifting rail the top can be removed in less than a minute's time, changing the buggy to a runabout and without leaving any unsightly top irons sticking out on the seat.

No. 11H720

This illustration shows the seat and top with one side curtain on it, to show the large mica light in the side curtain.

Be Sure to Read All About the Special Features of This Buggy on the Next Page.

This illustration shows the rear view of the sunken panel metal seat. It is by far the handsomest and best finished seat furnished on any top buggy. It is constructed the same as seats used on the highest priced automobiles.

Special Features Furnished on Our 1912 Twin Automobile Seat Buggy

Every improvement known to modern buggy building has been incorporated in the construction of this remarkable buggy. We wish to call your attention to a few of these features as illustrated and described below.

We guarantee this metal seat to be superior in appearance, finish and wearing qualities to any wood seat ever built.

We will replace free any metal seat which does not give satisfaction for any reason whatsoever.

This illustration shows the inside construction of our metal seat. Please note the heavy wood frame. This frame is covered with extra heavy 20-gauge sheet metal, which is formed and pressed to shape under immense hydraulic presses. The metal on this seat is absolutely solid and there is no possible chance of the seat opening up at the corners or at the sills. It presents an absolutely smooth surface and takes a finish like that on a piano. It is by far the most handsome and substantial buggy seat ever built.

This illustration shows the long distance axle which we use on this 1912 model buggy. Note the wide washer bearing. This axle is made for us by the famous Sheldon Axle Co. and is the same as is used on the highest priced Eastern buggies.

This illustration shows how the axle beds are clipped to the axles. Each bed is turned to exact shape and size and then is glued and clamped to the axle, as shown in the picture. When the glue has set absolutely tight, a clip is placed where each thumbscrew shows in the picture, and is firmly bolted on. The entire axle and bed is then carefully sanded and smoothed. When the axle is painted and finished it is impossible to tell where the axle bed and the axle meet, they look like one solid piece. Note this when you receive your buggy. It is just one indication of the fine workmanship which we use on this buggy all the way through.

This illustration shows the long automobile rubber mat which is furnished regularly with this buggy. This mat is much superior to the carpet used in ordinary buggies, and will last much longer. Can be easily washed. While it costs more than carpet, we believe it is much more desirable, and we are therefore furnishing it regularly with this buggy at no extra charge.

This illustration shows the new 1912 improved Twentieth Century shafts. We wish to call your special attention to the patented triple braces, to the 36-inch long patent leather points and to the round straps and patches. These shafts are XXX hickory. You would not get a better pair of shafts if you paid $150.00 for a buggy.

This illustration shows our 12-inch wrought fifth wheel with wood head block. It is the best fifth wheel possible to buy. Guaranteed never to break.

This illustration shows our 37-inch French head French point springs, the best springs possible to buy. The ordinary buggy has 35-inch open or button head springs. By using these springs we assure you a very easy riding vehicle and an absolute guarantee against breakage.

OLD STYLE BODY LOOP.

OUR CENTER BEARING BODY LOOP.

Bearing on Top of Spring Allows Easy Working of Spring. See That Connection.

See That Bend.

Pull From Center. Straight Down Pull.

Illustration to the right shows one of the special features found on this buggy, and that is the center bearing body loop. Please follow the dotted lines as shown in illustration, and read the notice made in small type. This center bearing body loop puts all the strain on top of the spring where it belongs, and is the only body loop that does, and is a much more handsome body loop than the old style round kind. We originated this center bearing body loop at our factory in Evansville, Ind., since which time it has been widely copied, and now the majority of the leading manufacturers use it. We consider it a compliment to our originality and ingenuity.

This illustration shows a section of our screwed rim wheels and how the tires are bolted to the rims with extra long bolts running through felloe plates. We use the best grade wheels on this buggy, equal to those used on the highest priced Eastern buggies. A letter or a number can no longer be taken as an indication of the quality of a wheel, because of some unscrupulous manufacturers grading as No. 1 or "A" grade, wheels which if properly graded would not be even "D" grade. What we want to impress upon you is that we guarantee the wheels on this buggy to be made of the best grade selected hickory stock, selected by our own lumber buyers, and that the wheels are made in our own wheel factory under our own supervision. If they are not absolutely right it is our fault and we will make them right. We place a guarantee on these wheels which absolutely protects you. They are equal to the very best. Read the guarantee on page 1192.

Bent Auto Seat Surreys

No. 11H1422

The seats which we use on these surreys are full bent, that is, there are no corners; each seat is made of one piece of wood, steam bent; they are practically indestructible. The design of these seats is new for 1912 and we consider them as handsome as anything on the market. These full bent seat surreys have always been very large sellers and very popular. They cannot be duplicated from any other source for less than $15.00 to $30.00 in advance of our price. They are guaranteed for life and shipped on thirty days' trial with a guarantee of satisfaction.

PHAETON BODY ROAD CART

No. 11H101

Price, complete, as shown in illustration.....

In building this cart we use selected grade Sarven's patent wheels, 45 inches selected second growth hickory spokes; 1-inch screwed rims, fitted with 1¼x5-16-inch edge steel tires; seat frame, foot rack, etc., made of strong, thoroughly seasoned hardwood shafts made of selected hickory, with circle bar; long easy riding oil tempered springs adjusted and hung so as to balance the seat perfectly; seat and lazy back as shown in illustration, upholstered in imitation leather. The seat is hinged so that it can be used and small articles carried in the box under the seat. Built to carry two passengers although the adjustment of the spring is such that it will ride very easy with only one passenger. The body of this cart is painted black, with a rich blood carmine, neatly striped.

TRACK—4 feet 8 inches narrow or 5 feet 2 inches wide. **State width wanted.**
Shipping weight, about 200 pounds. Shipped from factory at Evansville, Ind.

SKELETON ROAD CART

Guaranteed.
See page 1192.

No. 11H91

Price, complete, as shown in illustration.....

No. 11H91 Road Cart has Sarven's patent wheels, 45 inches high; selected second growth hickory spokes; 1-inch screwed rims, fitted with oval edge steel tires; all parts made of good well seasoned hardwood timber; shafts made of selected hickory, with circle bar; skeleton seat with rail, as shown in illustration; long easy riding oil tempered springs, adjusted and hung so as to balance the seat properly. This cart is built for two passengers, but the adjustment of the spring is such that it will ride easy with only one passenger. Painted carmine red, black trimmed.

TRACK—4 feet 8 inches narrow or 5 feet 2 inches wide. **State width wanted.**
Shipping weight, about 130 pounds. Shipped from factory at Evansville, Ind.

Watson Farm Wagons

aranteed as Good as Any Wagon Made.

All Farm Wagons Are Shipped Direct From Factory at Henderson, Ky. All Prices Quoted Are for Delivery to Railroad, Ready for Shipment.

ck, 4 Feet 6 Inches Narrow and 5 Feet Wide. State Which You Want.

OUR GUARANTEE

We guarantee the Watson Farm Wagon to be as good as any farm on made. We use nothing but the very best of material and allow thirty days' trial in which to decide whether our wagons are satisfory. We will ship you any style wagon you may select and allow to use it under any conditions for thirty days; at the end of that if you do not feel perfectly satisfied with it, if it is not the style on you need, you can return it to us and get back the purchase price he wagon together with any freight charges you may have paid.

Construction of Watson Wagons

EELS—All material used in our wheels has been thoroughly seasoned from three to five years; white oak spokes and rims; Pennsylvania black birch hubs. Tires are made of the best grade of steel and are standard width and thickness, properly set according to the most modern methods. Boxings are set in red lead under hydraulic pressure. Rims are riveted; tires are bolted to rims. Sectional rims furnished on all farm wagons unless otherwise specified. We will furnish two-piece bent rims if so desired. Wheels are dipped in boiled linseed oil before being ironed. Wheels guaranteed to be as good as wheels on any farm wagons. We regularly furnish wheels 44 inches front and 52 inches rear, but can furnish wheels measuring 40 inches front and 44 inches rear, if so specified.

LES—Second growth bone dry hickory, the best that money can buy. Each axle is shaped on automatic machinery to fit the skeins which are used on it, making an absolutely tight fit, preventing and insuring against moisture getting between the skein and axle. Watson steel skeins have a solid extension back of the collar, which keeps the grease from working out on the axle. All skeins have extra large wells and there is more of the wood axle left inside the skeins than in any other skeins on the market. They are set in red lead under hydraulic pressure and are guaranteed not to come loose. They are level bearing so that the weight of the load is distributed the entire length of the skein. All axles are dipped in boiling linseed oil before being ironed.

GEAR—All gear woods are thoroughly air seasoned and bone dry. Nothing but second growth oak is used in the construction of the gear. All wood parts are dipped in boiled linseed oil before being ironed. Very few bolts are used on the gears; we are using the clipped construction of gear, which not only does not weaken the gear woods but helps to support them. Square hound drop tongue front gear furnished on all wagons unless otherwise specified. Square hound gear is superior in every way to the old style bent wood hound and will last longer and give better service. We will furnish stiff tongue square hound front gear on any style wagon if so desired at no extra charge.

POLE—The pole used on our Watson Wagons is heavier than is generally furnished, heavily ironed and well braced; singletrees ironed full length and extra heavy irons used on neckyoke and doubletrees. Nothing but the best of hickory and oak used in these parts.

BOX—We are using nothing but "Old Hill Poplar" for our wagon box sides, thoroughly air seasoned and guaranteed not to warp, split or check; yellow pine floor, matched and grooved. Stake and strap plates on outside of box; double bottom over bolsters; box fastener on each side and an anti-spreader chain. Box is guaranteed to be the best wagon box made.

PAINTING—We paint our wagons in the best possible manner, using a coat of priming lead, color, color varnish and finish. Boxes are painted green with black and red trimming. Gear is painted bright red with black stripes.

HOW TO ORDER.

All that is necessary in ordering a wagon from us is to give us the catalog number, as shown below, and track and we will ship you a wagon just as described. If there are any changes to be made be sure to state them on your order and send us proper amount of money for any extras you may need. **Be sure to give us the width of track used in your section of the country.**

OUR GIANT HANDY WAGON

$22.80

REGULAR GUARANTEE. See Page 1192.

This metal wheel wagon is furnished on different heights of wheels, as shown in the table opposite. When on wheels 26 inches front and 32 inches rear, the top of bolsters are only 26 inches from the ground, making it a very handy wagon for loading. Axles are made of the best hickory; bolsters, coupling pole and tongue are made of the best oak; stakes are oak, bound with flat iron. Coupling pole is 9 feet 4 inches long and if wanted can be furnished 12 feet long at the same price. Front and rear hounds are of angle steel, almost indestructible, and the wheels are the best metal wheels made. Spokes and tires are made of the best wrought steel, guaranteed not to break on the rockiest roads. Hubs are made of superior cast iron, cast on to the spokes, making an almost one-piece construction, and we guarantee the spokes never to become loose in the hub. This wagon with its broad tires is handy in the field and over soft roads, and is guaranteed fully by us. Comes with either 4 feet 6 inches, narrow, or 5 feet, wide track. **Do not fail to state width of track desired.**

NOTE—4,000-pound capacity wagons have 3¼x10-inch skeins and tires ⅜ inch thick; 6,000-pound capacity wagons have 3½x11-inch skeins and tires ½ inch thick; 8,000-pound capacity wagons have 4x12-inch skeins and tires ⅝-inch thick. Shipped from Northern Illinois factory.

No. 11H1891 IS THE MOST POPULAR SIZE FOR ALL AROUND USE.

Low Wood Wheel Farm Truck

$31.50

3¼x10-Inch Cast Skeins. REGULAR GUARANTEE.

DESCRIPTION.

This truck is made of good material and will give excellent service and satisfaction. We use a material in this wagon which is not of the very highest grade, therefore cannot be used in our Watson Wagon. This material is not defective, however, and is better than is used in the ordinary farm wagon or truck. We sell this truck under our regular guarantee. Wheels, 3 feet front and 3 feet 8 inches rear; no other height furnished; 3x⅜-inch tires; gear, axles, hounds and bolsters are made of good quality material, guaranteed against defect. Square hound drop tongue front gear furnished regularly. This truck is well painted and finished; painted deep red with black stripe; varnished. Track is 4 feet 6 inches narrow or 5 feet wide, measuring from center to center of tires. **State width of track wanted.** Capacity, 3,000 pounds. Weight, 650 pounds. Shipped from factory.

HORSE COLLARS

No. 10H3694¼ 75c No. 10H3677¼ 39c No. 10H3693¼ 25c

HOW TO MEASURE HORSE COLLARS: Take a rule and measure inside of collar from bottom on the rim or front of the collar and the inside measure will be the size you wanted. Measure around the heavy part of collar for size of draft. Our draft measurements are for 20-inch size collars. Smaller sizes will not measure as much and larger sizes will be more. **BE SURE TO STATE SIZE WANTED.** Sweat Pads should be one size larger than the collar. Lay the shoulder part of the collar in about 3 inches of water for 6 to 8 hours, then buckle on the horse and be sure the hames fit the collar well. Work the horse for half a day and the collar will never make the shoulders sore and will always fit the horse. If you want extra large collars, over 22 inches, order Nos. 10H3439¼, 10H3443¼, 10H3452¼ or 10H3458¼. We carry 23-inch and 24-inch of these four collars in stock.

No. 10H3399¼ A Southern Plow Collar, of heavy cotton duck with leather chafes on sides where the chain or trace attaches to hames. Leather pad, heavy canvas welt. This collar is used throughout the South, a cheap plow collar. Sizes, 17 to 22 inches in measurement. Draft, 14 inches. State size wanted. Weight of collar, about 7 pounds. Price, each..... **55c**

No. 10H3402¼ Our Cheap Farm Collar, with a split rim and shoulder and heavy duck face. One of the best heavy split and canvas collars we make, used throughout the South and Southwest as a cheap farm collar. Sizes, 17 to 22 inches. Draft, 13 inches. Be sure to state size wanted. Weight of collar, about 4½ pounds. Price, each..... **80c**

No. 10H3404¼ Our Coker Face Split Shoulder Collar. This style collar is popular for a cheap farm collar. Extra large room, thong sewed, with patent fastener on top with good heavy leather faces. Sizes, 17 to 22 inches. Draft, 15 inches. Be sure to state size wanted. Weight of collar, about 4½ pounds. Price, each..... **$1.06**

No. 10H3407¼ Our Light Weight Buggy with full kip rim and shoulder, buckle top, in sizes 17 to 22 inches. Draft, 10¼ inches. Be sure to state size of collar wanted. Weight, about 3½ pounds. Price, each..... **$1.60**

No. 10H3409¼ Is Our Fine Turned Edge Weight Buggy Collar, made of best kip with turned edge shoulder and large Buckle top. Sizes, 17 to 22 inches. Draft, 11 inches. Be sure to state size of collar wanted. Weight, about 4 pounds. Price, each..... **$1.95**

No. 10H3413¼ Our Open Throat or Collar, made with buckle fastened on heavy sole leather pad and iron coupler on top. Collar is held together by the strap running through the loop on coupler. The best bark tanned collar leather, shoulder and rim and russet leather. Heavy thong sewed shoulder and rim. This is easily used on this style collar. An open sweat pad and collar open at the top. Sizes, 17 to 22 inches. Draft, 14 inches. State the size wanted. Weight of collar, about 7 pounds. Price, each..... **$2.85**

No. 10H3417¼ Good heavy black split rim and shoulder collar russet leather thong sewed rim and shoulder, patent fastener on top, heavy collar pad. For light farm work this collar will give service as higher priced collars. Sizes, 17 to 22 inches. Draft, 14½ inches. State size wanted. Weight, about 6 pounds. Price, each..... **$1.95**

Kip Leather Farm Collar or Light Express Collar. Two sizes, 13¼-inch and 14½-inch draft. Rim, shoulder face bark tanned leather, full thong rim and shoulder; wear leathers on the front of the collar to prevent hame tug from wearing the collar. Sizes, 17 to 22 inches. Be sure to state size wanted. Weight, about 6 pounds.

No. 10H3421¼ 13½ inch Price, each..... **$2.40**

No. 10H3422¼ 14½-inch Price, each..... **2.54**

No. 10H3448¼ This collar is universally used in all parts of the country. Extra heavy Dundee bark tanned collar leather, buckle top, heavy sole leather collar pad. Heavy thong stitched rim, double thong ribbed laced throat, and wide ribbon thong laced shoulder. Half Sweeney pattern and just the style collar to use on horses with thick necks or large shoulder blades. Sizes, 17 to 22 inches. State size wanted. Collar is made extra heavy, 15½-inch draft in the widest part, and weighs about 7½ pounds. Price, each..... **$3.35**

No. 10H3449¼ Dundee bark tanned collar leather, thong stitched rim, wide ribbon thong laced shoulder, buckle top, heavy pad. Sizes, 17 to 22 inches. Draft, 13½ inches. State size wanted. Weight, about 5½ pounds. Price, each..... **$2.70**

Williams' Throatless Collar.

No. 10H3451¼ Heavy Dundee bark tanned collar leather, double thong sewed rim to the shoulder, and wide ribbon thong laced shoulder. The throat of the collar is built of leather, not stuffed, making a strong throatless collar. Buckle top, heavy pad. Sizes, 17 to 22 inches. Draft, 15½ inches. Be sure to state size wanted. Weight, about 7¾ pounds. Price, each..... **$3.40**

No. 10H3429¼ Wide, heavy top, heavy sole leather collar pad, wide flange, wide draft, half Sweeney pattern, so the hames will not hurt the horse's shoulder. Is just the kind of collar to use on horses with thick neck and heavy shoulders. Thong sewed rim and shoulder; the flange on the collar is double and stitched and makes it look like a full shoulder collar when looking at it from front of collar. Sizes, 17 to 22 inches. Draft, 15 inches. Be sure to state size wanted. Weight of collar, about 6 pounds. Price, each..... **$2.98**

No. 10H3439¼ Our Heavy Double Stitched Rim Dray Collar. Curled hair face shoulder. Made of extra heavy Dundee bark tanned leather, wide rim and heavy harness leather shoulder, double thong stitched rim and thong laced shoulder. Wide flange, shoulder extra heavy, wide draft, buckle top collar. Collar being made with curled hair face adjusts itself to the horse's shoulder. Horse will never have sore shoulders if this collar is used. Sizes, 18 to 24 inches. Draft, 16 inches. State size wanted. Weight, about 8½ pounds.

Price, each, 18 to 22 inches..... **$3.56**

Price, each, 23 inches..... **4.20**

For Horse Clipping and Sheep Shearing Machinery, see page 518.

No. 10H3677¼ "Triplex" Sweat Pad. Strong, dependable sweat collar pad for heavy work. Free circulation between the horse's shoulder and collar. When soiled wash or scrub with soap and water and dry in the sun. "Triplex" sweat pads do not chafe the horse. Cooling and smooth surface, less heat and friction. Sizes, 18 to 24 inches. Draft, 10 inches. State size. Weight, about 16 ounces. Price, each, for one horse..... **39c**

No. 10H3693¼ Our Special Sweat Pad, made of old gold drill, well stuffed with composite stuffing, four rows of quilting, four hooks, open at bottom, extra wide 12-inch draft; will fit large collars. Not as good as our Curled Hair Pad No. 10H3694¼. Sizes, 18 to 24 inches. Be sure to state size wanted. Shipping weight of pad, 58 ounces. Price, each..... **25c**

No. 10H3694¼ Curled hair goods are very healing to a horse with sore shoulders. The pad is springy and cool and the curled hair stuffing does not get hard, therefore prevents galls sores. With proper care the pad will outwear five ordinary cheap sweat pads. To get good service out of this curled hair pad it should be washed every two or three weeks, scrubbed with a brush and soap. Rinse thoroughly and, if possible, dry in the sun. This cleanses and makes the pad practically as good as new. Size, 12-inch draft. Blue top and white face; four rows stitching. Shipping weight, about 50 ounces.

Price, each..... **$0.75**

Price, per dozen..... **8.40**

Collar Pads.

No. 10H3604 Oscillating Top Perforated Center Collar Pad, stamped out of heavy skirting, perforated top with steel saddle which takes the weight of the collar off the horse's neck. One of the best top collar pads on the market. Shipping weight, 15 ounces. Price, each..... **39c**

Dundee Oak Williams' Special Made Two-Horse Lines. Three-Row Stitching in Each Lap.

$3.93 $4.17 $4.41 $4.64

These lines are made out of the very best selected Dundee bark tanned line leather. The straps are cut extra heavy. The laps are sewed with heavy thread three-row stitching in each lap. Roller buckles and leather loops at billet, round center bar buckles will not catch in fly net. Positively the best team lines on the market. The weight of stock used in these lines and being made full length and not cut short as the ordinary lines are, make them the best lines you can buy. Made in two lengths only, 18 and 20 feet, 1 inch and 1⅛ inches wide and measuring full length, not 8 or 10 inches short as most all lines are. Remember, these are not the cheap light lines, but are extra heavy and the best that can be made.

No. 10H2169	1 in. x 18 feet.	Weight, about 4¼ pounds.	Price, per pair..	$3.93
No. 10H2171	1 in. x 20 feet.	Weight, about 4½ pounds.	Price, per pair..	4.17

Novelty Trimmings for Harness and Buggies.

The overcheck loop and check spring are very handy on the overcheck of bridles. They prevent the breaking of the overcheck when the horse stumbles. The whip holder can be fastened on the buggy top or nailed in the barn. The line guard fastens on the hip strap without punching a hole in the hip strap and keeps the lines from going under the horse's tail. The trace spring is fastened with a staple on the singletree and keeps the traces from falling off. This is the best trace fastener on the market. Shipping weight, about 2 ounces.

Williams' Special Hand Braided Bars, Strings Braided in Bars.

Strings are braided in the bars so they will not slip pull through the bars. The bars are hand braided, makes them very strong, and they will lie down flat on horse's back. The strings are close enough together to keep flies off the horse's legs. Braided end bars on each side of the net. Braided breast plate with snap to snap on the horse's breast. This net has a 5-foot body with piece extra; fits the average size horse. This style of hand braided cotton bars has one of the largest of any team cord net on the market. Nets similar to this strings not so long are generally sold for $5.00 to $6.00 per pair for two horses. The cords in this net are silk fish cord, very strong, well made, twisted string. Hand braided bars are black and gold color, with gold strings. Weight, about 3 pounds.

No. 10H9185 Size, 55-string body. Price for one horse.....**$1.48**

Our Seventy-String Harvest Team Net.

Made with 9-foot cotton cord stripes and 5-foot solid leather bars. You buy this net with heavy solid leather bars as cheap as you can buy a net with pieced leather bars and short strings from your dealers. This net is worth 75 cents more than a pieced bar short string net for which you will have to pay from $1.75 to $2.00. The bars are double, with the cord strings placed between the bars and well fastened with wire staples. The top and bottom bars being solid throughout, not pieced, make it one of the best and strongest cord nets on the market. Weight, 4½ pounds.

No. 10H9113 Price, one net for one horse.....**$1.95**

No. 10H9114 Price, two nets for two horses..... **3.95**

$500,000.00 Worth of Mill Work READY TO SHIP

We Guarantee the Quality—We Guarantee Safe Delivery
We Guarantee a Big Saving On Each Order

Read this announcement and then turn to pages 1148 to 1152 for the greatest building material bargains your money can buy. You can purchase doors, windows, door and window frames, moldings, porch materials, stair work, blinds, colonnades and grills from us at **manufacturers' prices,** with but one small profit added. The prices shown on this page will give you some idea of the saving we can make you, which is from 25 to 35 per cent on materials that are guaranteed to be the very best of their kind on the market.

You can get everything you need in the building material line from us in a few days after we receive your order. We can make 1,500 doors and 5,000 windows a day. We have always on hand 75,000 doors and 100,000 windows ready for immediate shipment.

We carry everything in millwork in the same big quantities and as this big stock is constantly moving **from the factory to the consumer** our products are always **fresh, clean and perfect in every way.** More than 700 people at our great mill work factory are there to serve our customers. We can ship a complete house bill inside of forty-eight hours. By our method of packing, crating and boxing our mill work we insure its arrival at destination without a stain or scratch. If you do not find what you need on pages 1148 to 1152 write at once for our Special Building Material and Mill Work Catalog, which will be mailed to you free and postpaid upon request. It illustrates, describes and prices upwards of 5,000 building material bargains.

MILLIONS OF PEOPLE ORDER GOODS FROM THIS BIG CATALOG. PROBABLY YOU ARE ONE OF THEM. ARE YOU AWARE OF THE TREMENDOUS VALUES ON PAGES 1148 TO 1152.

If not you are not getting the full benefit of our great money saving catalog. We want you to know that it is easy to save $25.00, $50.00 or $100.00 if you have any repairing or remodeling to do on your buildings. You can make up your order from our building material pages in this catalog with the fullest confidence that everything will be entirely satisfactory if you will simply give us the correct sizes and catalog numbers.

We guarantee to please you and to make everything just right; otherwise you can ship back the goods and we will return your money, together with any transportation charges you may have paid. If you are going to build a new house or barn write for our free Book of 110 Modern Houses described on page 1146 of this big catalog.

IF WE CAN SAVE YOU $10.00 ON A SUIT OF CLOTHES AND $25.00 ON A BUGGY WE CAN ALSO SAVE YOU $50.00 ON A FLIGHT OF STAIRS, $100.00 ON A CARLOAD OF LUMBER AND $500.00 TO $1,000.00 ON A HOUSE.

It is all owing to our method of merchandising. All of the middlemen's and retail dealers' profits **remain in your own pocket.** Read our announcement on the opposite page; make an investigation of this entire building question on your own account. Send for our Wholesale Lumber List and compare prices. The result will astonish you. Again we ask you to turn to pages 1148 to 1152. Note particularly the pictures of houses built according to our plans and with our material. Read what the builders have to say. Any one who has used our material is a satisfied customer because we supply only the finest quality of building material at a saving of at least 25 per cent—in many instances our prices are just half regular retail prices.

BUY DIRECT FROM MANUFACTURER AND

Save from $100.00 to $150.00 ON ENOUGH LUMBER FOR THE AVERAGE SMALL HOUSE OR BARN.

A DOUBLE BARGAIN.

Every piece of lumber you buy from us is *a double bargain—a rgain in price* and a *bargain in quality.*

WE ARE MANUFACTURERS of high grade lumber in every size, width and ckness; in fact, we make everything needed for a building from the foundation up.

WE SHIP ALL LUMBER direct from our big mills in the South or from our acre distributing yards in Illinois at prices that represent actual manufacturing st, plus our one small profit.

YOU SAVE FROM 33⅓ TO 50 PER CENT, or from $100.00 to $150.00 per car by s method of buying direct from the manufacturer and thus eliminating the bers' profit and the retail dealers' profit. Retail dealers cannot buy lumber to any better advantage than **you** can buy from us and we e you a greater advantage in wide selection and low price than if you owned a lumber yard of your own.

WE SHIP LUMBER QUICK. On account of the enormous stock carried (a total stock of over 2,500 carloads always on hand), we are able ship complete orders on a few days' notice from either our big mills in the South or from our yards in Illinois.

Guaranteed All Wool Satin Lined Blue Serge Suit *for* $8.90

For $8.90 we offer all the perfection of style, fit and finish that skilled designers and tailors elsewhere are able to produce for $18.00, and more quality and value than was ever put into Serge Suits sold at less than $18.00 elsewhere. Overwhelming proof that our one profit direct from manufacturer to wearer plan of making and selling Men's Ready to Wear Clothing is the only method for securing positive clothes satisfaction at lowest cost.

Description of Suit. Made from a perfectly shrunk all wool worsted fine twill serge in rich deep navy blue color. Guaranteed absolutely fast. New 1912 sack style, exactly like illustration. Body of coat and back of vest lined with luxurious black satin, such as you find in the most expensive custom made clothes. Neck opening of vest finished with detachable white vestee. Sleeve cuffs of coat finished with open vent and two buttons. New Bartell patented never-sag pockets. Pants have belt loops, side buckles and suspender buttons sewed inside of waistband.

Send Your Order Now. Ask for Blue Serge Suit No. 45H6625. Give your breast, waist and inseam measures, also your height and weight and send us $8.90. We will ship the suit instantly upon receipt of order. If suit does not please you or does not prove exactly as represented, return it to us at our expense, and we will return your money and all transportation charges you paid. We take all the risk.

Sizes: This suit is furnished in the following sizes only: From 34 inches up to and including 44 inches breast measure, 30 to 42 inches waist measure and 30 to 36 inches inseam. See inside front cover page for measuring instructions.

Let Us Send You Free Sample Book No. 89H.

We conduct one of the largest Men's Ready to Wear Clothing Departments in the world. Sample Book No. 89H shows our complete line of men's ready to wear clothing for spring and summer. Suits, overcoats, trousers, raincoats, outing clothing, motorcyclists' clothing, fancy vests, everything in men's outer apparel is shown by fashion plates and good size actual cloth samples. All at lowest prices, based on actual manufacturing cost, with only one profit added. Write and ask for Sample Book No. 89H.
